

Discovering Computers
Concepts for a Digital World **2003** Chapter 8 Objectives
Web and XP Enhanced

Describe the two types of software

Identify various stand-alone operating systems

Understand the startup process for a personal computer

Identify various network operating systems

Describe the term user interface

Recognize devices that use embedded operating systems

Explain features common to most operating systems

Discuss the purpose of the following utilities: file viewer, file compression, diagnostic, uninstaller, disk scanner, disk defragmenter, backup, and screen saver

Know the difference between stand-alone operating systems and network operating systems

What is booting?

- Process of starting or restarting a computer

cold boot

Process of turning on a computer after it has been powered off completely

warm boot

Process of restarting a computer that is already powered on

How does a personal computer boot up?

- 1: Power supply sends signal to components in system unit
- 2: The processor accesses BIOS to start computer

What is multitasking?

- Allows single user to work on two or more applications that reside in memory at same time

- Foreground contains active application - the one you currently are using
- Background contains inactive programs that are running but are not in use

What are other program management features of operating systems?

- multiuser**
 Operating system enables two or more users to run a program simultaneously
- multiprocessing**
 Operating system can support two or more processors running programs at same time
- fault-tolerant computer**
 Continues to operate even if one of its components fails
 Computer has duplicate components such as processors, memory, and disk drives

What is memory management?

- Optimizes the use of random access memory (RAM)

allocates, or assigns, data and instructions to area of memory while they are being processed

monitors contents of memory

clears items from memory when processor no longer requires them

Next 8.8.10

How does an operating system schedule jobs?

- Adjusts schedule based on job's priority

receiving data from an input device

job

An operation the processor manages

transferring items from storage to memory and from memory to storage

sending information to an output device

processing instructions

What are some characteristics of operating systems?

- device-dependent**: One that runs only on specific type of computer
- device-independent**: Runs on many manufacturers' computers
- proprietary software**: Privately owned and limited to specific vendor or computer model
- downward-compatible**: Recognizes and works with application software written for earlier version of operating system
- upward-compatible**: Written for earlier version of operating system, but also runs with new version

Utility Programs

What is a utility program?

- System software that performs a specific task
- Examples include:
 - File viewer
 - File compression
 - Diagnostic utility
 - Uninstaller
 - Disk scanner
 - Disk defragmenter
 - Backup utility
 - Screen saver
