DISCLAIMER

Care has been taken to confirm the accuracy of the information present and to describe generally accepted practices. However, the authors, editors, and publisher are not responsible for errors or omissions or for any consequences from application of the information in this book and make no warranty, expressed or implied, with respect to the currency, completeness, or accuracy of the contents of the publication. Application of this information in a particular situation remains the professional responsibility of the practitioner; the clinical treatments described and recommended may not be considered absolute and universal recommendations.

The authors, editors, and publisher have exerted every effort to ensure that drug selection and dosage set forth in this text are in accordance with the current recommendations and practice at the time of publication. However, in view of ongoing research, changes in government regulations, and the constant flow of information relating to drug therapy and drug reactions, the reader is urged to check the package insert for each drug for any change in indications and dosage and for added warnings and precautions. This is particularly important when the recommended agent is a new or infrequently employed drug.

Some drugs and medical devices presented in this publication have Food and Drug Administration (FDA) clearance for limited use in restricted research settings. It is the responsibility of the health care provider to ascertain the FDA status of each drug or device planned for use in their clinical practice.

Preface to the Seventh Edition

This new edition was revised and structured anew in different ways. Each chapter is provided with an introductory front page to give an overview of the topics of the chapter and short descriptions. The whole introductory chapter "General Anatomy" was newly arranged and supported with introductory texts, thus facilitating students to better understand the complicated "world" of gross anatomy. The large chapter 2 "Head and Neck" was split into 5 sub-chapters with an introductory page each. Furthermore, the drawings were revised and improved in many chapters and depicted more consistently. In most of the chapters new photographs taken from newly dissected specimens were incorporated.

The general structure and arrangement of the Atlas were maintained. The chapters of regional anatomy are consequently placed behind the systematic descriptions of the anatomical structures so that students can study – e.g. before dissecting an extremity – the systematic anatomy of bones, joints, muscles, nerves and vessels. For studying the photographs of the specimens the use of a magnifier might be helpful. The enormous plasticity of the photos is surprising, especially at higher magnifications.

In many places new MRI and CT scans were added to give consideration to the new imaging techniques which become more and more important for the student in preclinics. We would like to express our sincere thanks to Prof. Heuck, Munich, who provided us with the MRI scans.

We would like to express our great gratitude to all coworkers who helped to make the *Color Atlas of Anatomy* a success. We are particularly indebted to those who dissected new specimens with great skill and knowledge, particularly to Jeff Bryant (member of our staff) and Dr. Martin Rexer (now Klinikum Fürth, Germany), who prepared most of the new specimens of the fifth, sixth and seventh edition. We would also like to thank Dr. K. Okamoto (now Nagasaki, Japan), who dissected many excellent specimens of the fourth edition, also included in the fifth edition. Furthermore, we are greatly indebted to Prof. W. Neuhuber and his coworkers for their great efforts in supporting our work.

The specimens of the previous editions also depicted in this volume were dissected with great skill and enthusiasm by Prof. Dr. S. Nagashima (now Nagasaki, Japan), Dr. Mutsuko Takahashi (now Tokyo, Japan), Dr. Gabriele Lindner-Funk (Erlangen, Germany), Dr. P. Landgraf (Erlangen, Germany), and Miss Rachel M. McDonnell (now Dallas, Texas, USA).

We are greatly indebted to Prof. Kyung Won Chung, Ph.D., Director of Medical Gross Anatomy, University of Oklahoma, USA, Dept. of Cell Biology, for his careful corrections of the proofs of the new edition.

In the underlying seventh edition photographs of the surface anatomy of the human body were included again. We omitted marks and indications in order not to affect the quality of the pictures.

Despite numerous additions and amendments the size of the volume did not increase so that students both in preclinics and in clinics are offered an atlas easy to handle and cope with. While preparing this new edition, the authors were reminded of how precisely, beautifully, and admirably the human body is constructed. If this book helps the student or medial doctor to appreciate the overwhelming beauty of the anatomical architecture of tissues and organs in the human, then it greatly fulfills its task. Deep interest and admiration of the anatomical structures may create the "love for man", which alone can be considered of primary importance for daily medical work.

We would like to express our great gratitude to all coworkers for their skilled work. Without their help the improvements of the *Color Atlas of Anatomy* would not have been possible. We would also like to express our sincere thanks to those at Schattauer GmbH, Stuttgart, Germany, Lippincott, Williams & Wilkins, Baltimore, Maryland, USA, and Igaku-Shoin, Tokyo, Japan, who always listened to our suggestions and invested again a great deal of their effort into improving this book.

Acknowledgements

We would also like to express our many thanks to Prof. W. Bautz (Radiologisches Institut, University Erlangen-Nürnberg, Germany) and Prof. A. Heuck (Radiologisches Zentrum, München-Pasing, Germany), who provided the newly included excellent CT and MRI scans.

We are also greatly indebted to Mr. Hans Sommer (SOMSO Co., Coburg, Germany), who kindly provided a number of excellent bone specimens.

Finally, we would like to express our great gratitude to our photographer, Mr. Marco Gößwein, who contributed the very excellent macrophotos. Excellent and untiring work was done by our secretaries, Mrs. Lisa Köhler and Elisabeth Wascher, and as well by our artists, Mr. Jörg Pekarsky and Mrs. Annette Gack, who not only performed excellent new drawings but revised effectively the layout of the new edition.

Last but not least, we would like to express our sincere thanks to all scientists, students, and other coworkers, particularly to the ones at the publishing companies themselves.

Preface to the First Edition

Today there exist any number of good anatomic atlases. Consequently, the advent of a new work requires justification. We found three main reasons to undertake the publication of such a book.

First of all, most of the previous atlases contain mainly schematic or semischematic drawings which often reflect reality only in a limited way; the third dimension, i.e., the spatial effect, is lacking. In contrast, the photo of the actual anatomic specimen has the advantage of conveying the reality of the object with its proportions and spatial dimensions in a more exact and realistic manner than the "idealized", colored "nice" drawings of most previous atlases. Furthermore, the photo of the human specimen corresponds to the student's observations and needs in the dissection courses. Thus he has the advantage of immediate orientation by photographic specimens while working with the cadaver.

Secondly, some of the existing atlases are classified by systemic rather than regional aspects. As a result, the student needs several books each supplying the necessary facts for a certain region of the body. The present atlas, however, tries to portray macroscopic anatomy with regard to the regional and stratigraphic aspects of the object itself as realistically as possible. Hence it is an immediate help during the dissection courses in the study of medical and dental anatomy.

Another intention of the authors was to limit the subject to the essential and to offer it didactically in a way that is self-explanatory. To all regions of the body we added schematic drawings of the main tributaries of nerves and vessels, of the course and mechanism of the muscles, of the nomenclature of the various regions, etc. This will enhance the understanding of the details seen in the photographs. The complicated architecture of the

skull bones, for example, was not presented in a descriptive way, but rather through a series of figures revealing the mosaic of bones by adding one bone to another, so that ultimately the composition of skull bones can be more easily understood.

Finally, the authors also considered the present situation in medical education. On one hand there is a universal lack of cadavers in many departments of anatomy, while on the other hand there has been a considerable increase in the number of students almost everywhere. As a consequence, students do not have access to sufficient illustrative material for their anatomic studies. Of course, photos can never replace the immediate observation, but we think the use of a macroscopic photo instead of a painted, mostly idealized picture is more appropriate and is an improvement in anatomic study over drawings alone.

The majority of the specimens depicted in the atlas were prepared by the authors either in the Dept. of Anatomy in Erlangen, Germany, or in the Dept. of Anatomy, Kanagawa Dental College, Yokosuka, Japan. The specimens of the chapter on the neck and those of the spinal cord demonstrating the dorsal branches of the spinal nerves were prepared by Dr. K. Schmidt with great skill and enthusiasm. The specimens of the ligaments of the vertebral column were prepared by Dr. Th. Mokrusch, and a great number of specimens in the chapter of the upper and lower limb was very carefully prepared by Dr. S. Nagashima, Kurume, Japan.

Once again, our warmest thanks go out to all of our coworkers for their unselfish, devoted and highly qualified work.

1 General Anatomy

Three general principles are recognizable in the architecture of the human organism:

1. **The principle of polarity:** Polarity is reflected mainly in the formal and functional contrast between the head (predominantly spherical form) and the extremities (radially arranged skeletal elements). In the phylogenetic development of the upright position of the human body, polarity developed also among the extremities: The lower extremities provide the basis for locomotion whereas the upper extremities are not needed anymore for locomotion, so they can be used for gesture, manual and artistic activities.
2. **The principle of segmentation:** This principle dominates in the trunk. The anatomical structures (vertebrae, pairs of ribs, muscles, and nerves) are arranged segmentally and replicate rhythmically in a similar way.
3. **The principle of bilateral symmetry:** Both sides of the body are separated by a midsagittal plane and resemble each other like image and mirror-image.

Horizontal section through the head at the level of the eyes.

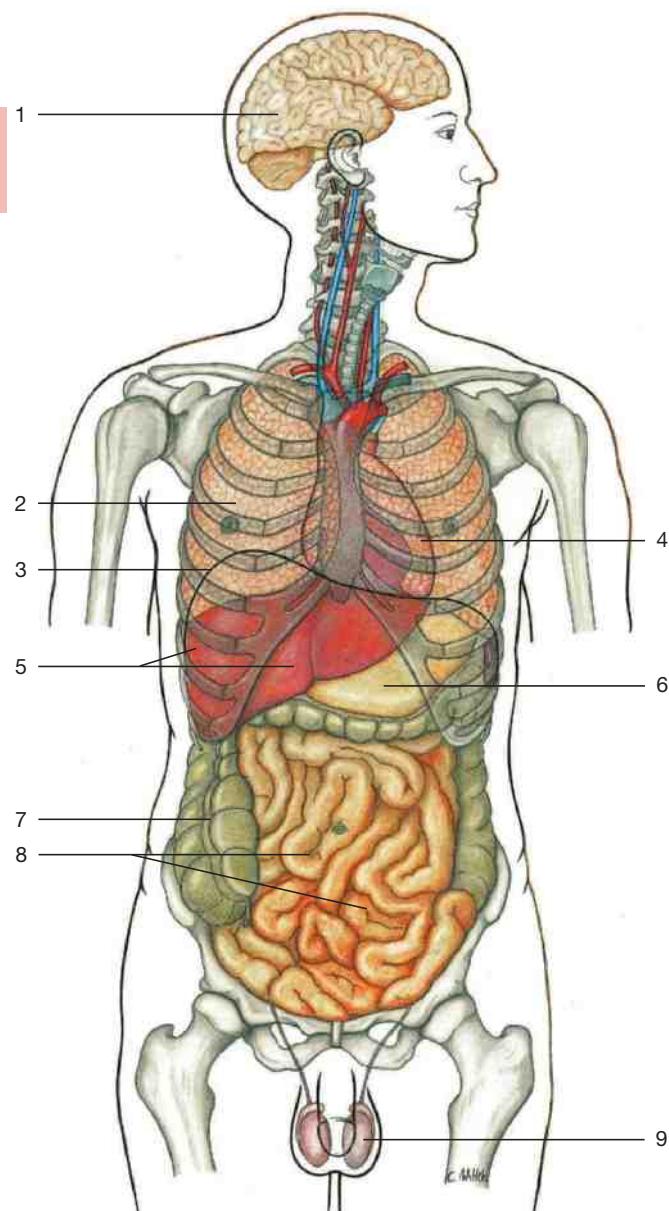

There are also different principles in the architecture and function of the inner organs:
The **skull** contains the brain and the sensory organs. They are arranged like mirror and mirror-image and are the basis of our consciousness.

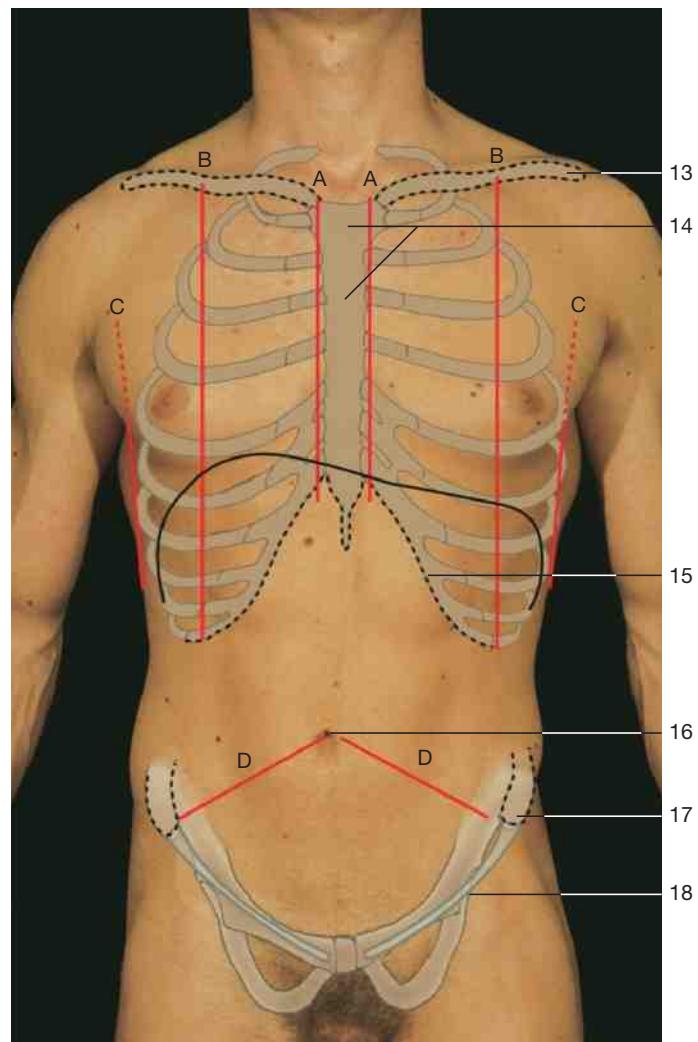

Coronal section through the thoracic and abdominal cavity.

The **thorax** contains the organs of the rhythmic system (heart, lung), which are only to some extent bilaterally organized. The consciousness (feeling, etc.) is located in-between.
In the **abdominal cavity**, the most important abdominal organs (intestinal tract, liver, pancreas) are arranged unpaired. Their functions remain subconscious.

2 Position of the Inner Organs, Palpable Points, and Regional Lines

Position of the inner organs of the human body
(anterior aspect). The main cavities of the body and their contents.

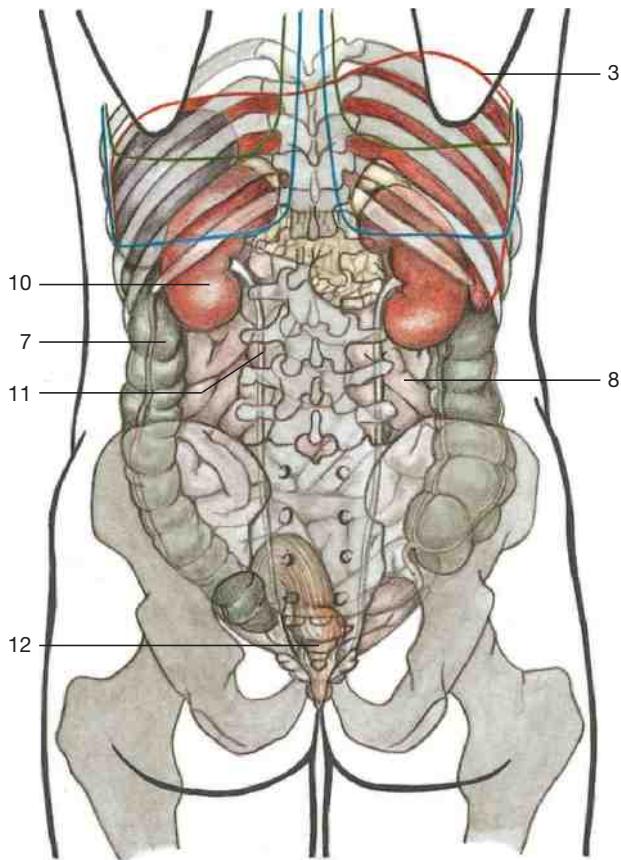

Regional lines and palpable points at the ventral side of the human body.

Regional lines

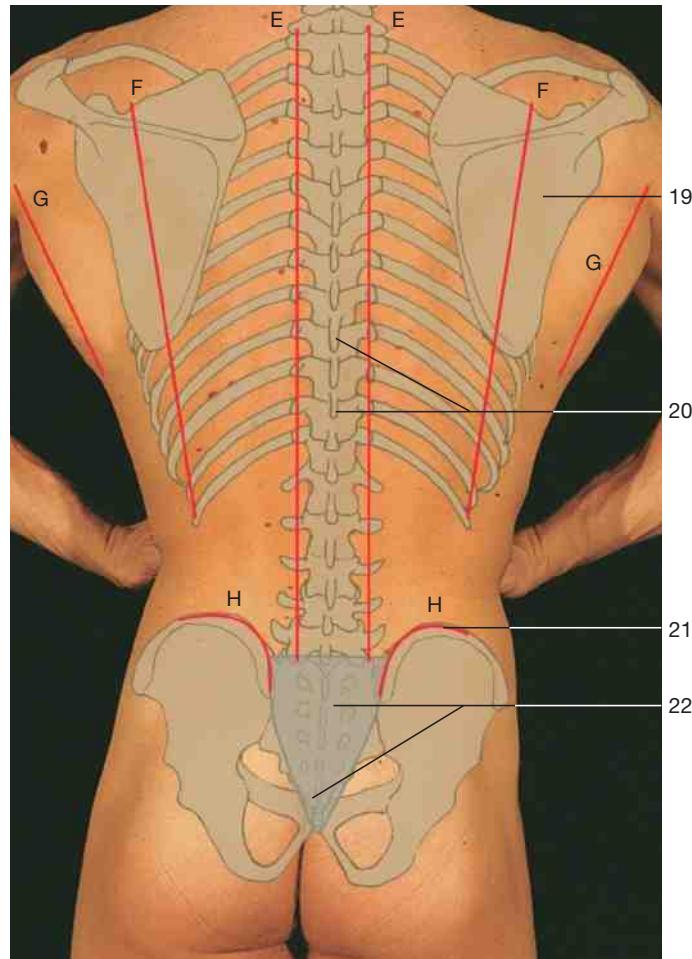

- A = parasternal line
- B = midclavicular line
- C = anterior axillary line
- D = umbilical-pelvic line

The bones of the skeletal system are palpable through the skin at different points. This enables physicians to localize the inner organs. On the **ventral side**, the clavicle, sternum, ribs, and intercostal spaces are palpable. Furthermore, the anterior iliac spine and the symphysis can be

localized. For better orientation, several **lines of orientation** are used, e.g., the parasternal line, the midclavicular line, the anterior axillary line, the umbilical-pelvic line. By means of these lines, the heart and the position of the vermiciform process can be localized.

Position of the inner organs of the human body (posterior aspect).

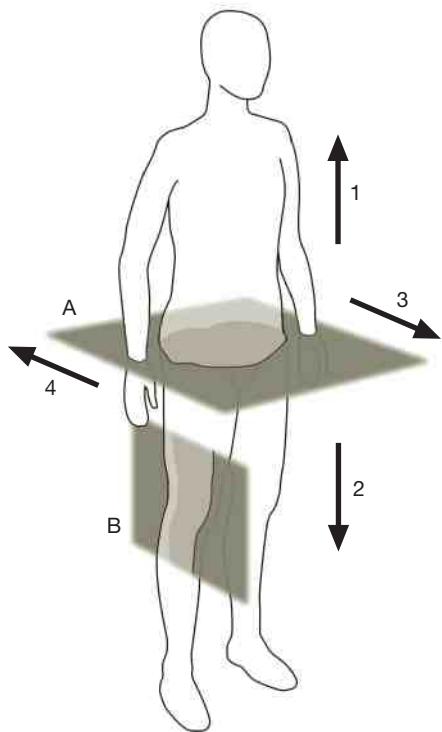

Regional lines and palpable points at the dorsal side of the human body.

Regional lines

- E = paravertebral line
- F = scapular line
- G = posterior axillary line
- H = iliac crest

- 1 Brain
- 2 Lung
- 3 Diaphragm
- 4 Heart
- 5 Liver

- 4 Compact bone
- 5 Articular cartilage

Coronal section through the proximal end of the adult femur showing the characteristic structure of the spongy bone.

Ossification of the femur (left: coronal section, right: posterior view of the femur). Arrows: distal epiphysis.

The **ossification of the bones** of the limbs starts within the ossification centers of the primary cartilaginous bones. Here, the medullary cavity develops. The ossification process of limb bones is not finished at birth.

Elbow joint with ligaments as an example of a hinge joint (monaxial humero-ulnar joint) in combination with a pivot joint (monaxial radio-ulnar joint), which allows rotation.

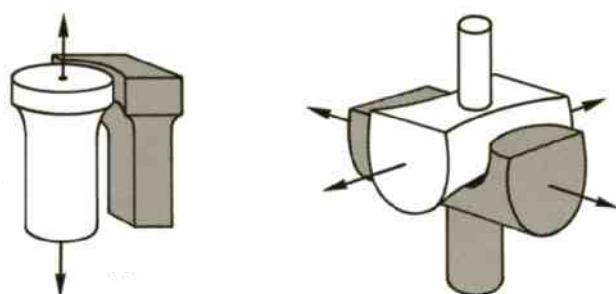

Coronal section of the elbow joint (MRI scan, courtesy of Prof. Heuck, Munich).
The possibilities of movement are shown in the schematic drawings on p. 11.

Coronal section of the shoulder joint
(MRI scan, from Heuck et al., MRT-Atlas, 2009).

Hinge joint
(e.g. humero-ulnar joint). Left: extension, right: flexion.
Arrows: axes of movement.

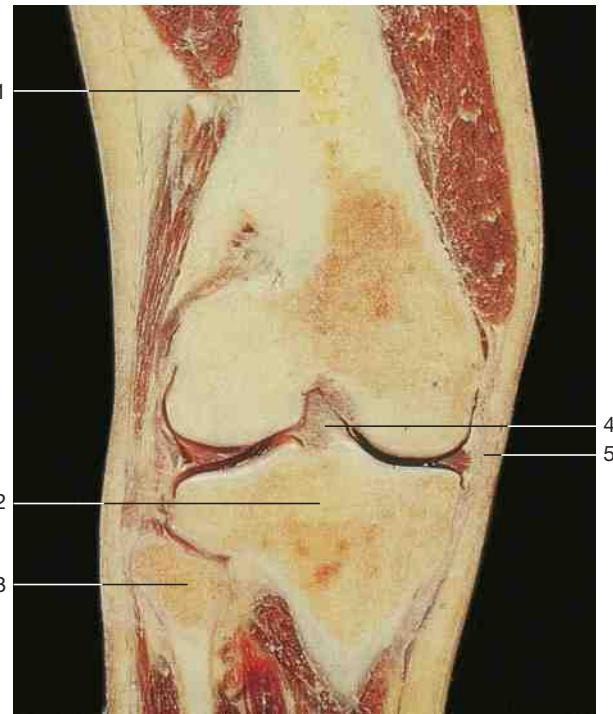

Pivot joint
(e.g. radio-ulnar joint).

Saddle joint
(e.g. carpometacarpal joint of the thumb).

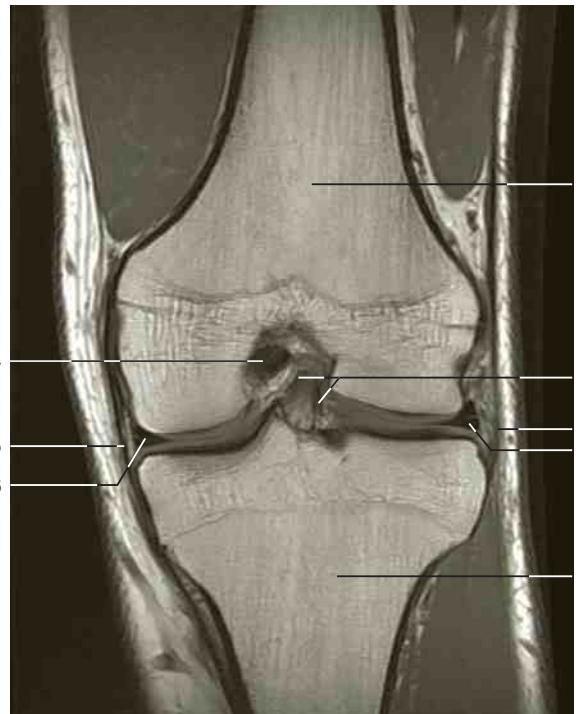

Skeleton of right wrist and hand (medial aspect).
The metacarpophalangeal joints are biaxial, as is the carpometacarpal joint of the thumb (* in the figure). The joints of the fingers, however, are monaxial.

Joints exhibit a variety of functions. In general, mobility becomes reduced in the direction from proximal to distal. The hip joint, e.g., is multiaxial; the knee joint is biaxial, and the joints of toes and fingers are monaxial.

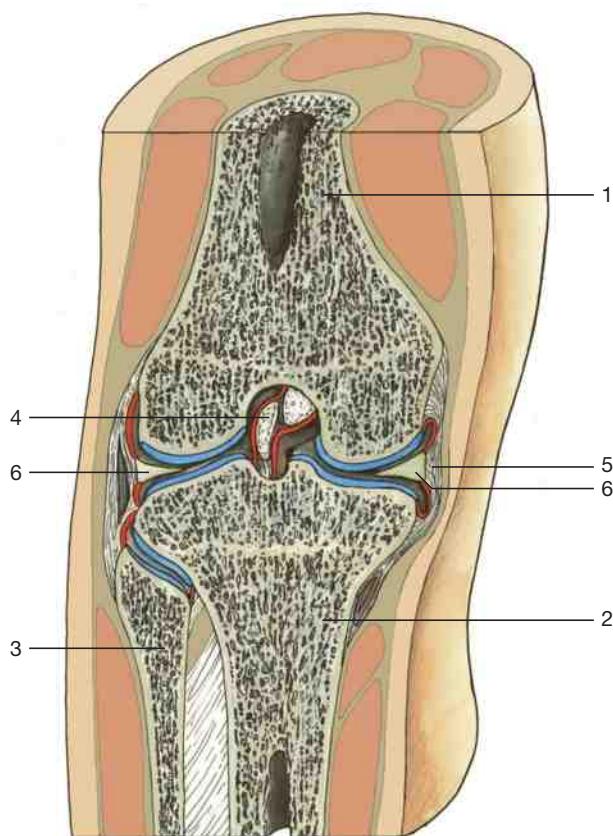

Coronal section through the knee joint (anterior aspect of the right joint in extension).

MRI scan of the knee joint (coronal plane) (from Heuck et al., MRT-Atlas, 2009).

Joints are places of articulation allowing movements between bones. Synovial joints are characterized by a joint cavity enclosed by a joint capsule containing synovial fluid, which is produced by the articular capsule. The kind of movements depends not only on form and structure of the articulating bones but also on ligaments incorporated into the articular capsule. In some synovial joints, fibrocartilagenous articular discs develop, when the articulating surfaces of the bones are incongruous.

Schematic drawing of the knee joint as an example of a synovial joint, characterized by a joint cavity enclosed by a joint capsule (red) containing synovial fluid. Blue = articular cartilage.

The human body possesses a **great variety of muscles**. The architecture of the muscles depends on the functional systems in which they are involved, i.e., the kind of move-

ments, the form of the joints with their specific ligaments, etc. The movements themselves vary to a great extent individually.

Ventral aspect of the right arm. The biceps muscle appears slightly contracted. In the area of the elbow joint, several subcutaneous veins can be recognized.

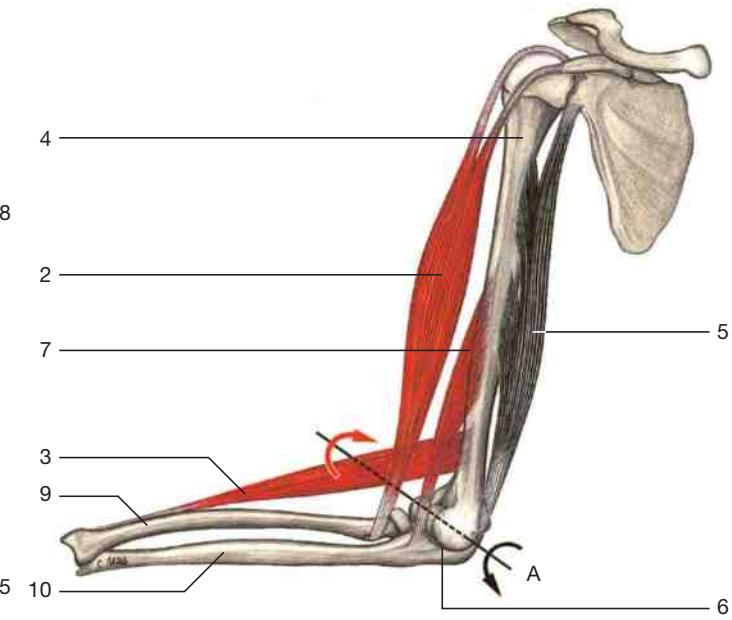

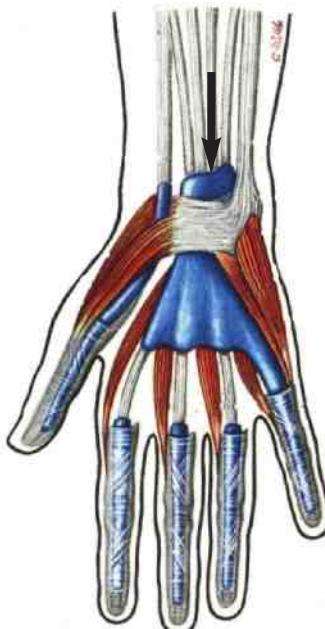

Diagram illustrating the position of the flexor and extensor muscles of the arm and their effect on the elbow joint.

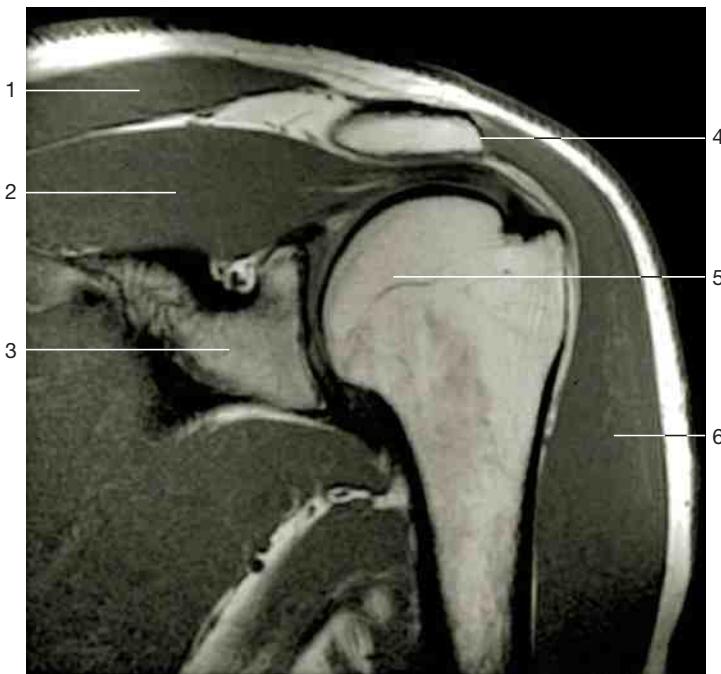

A = axis of humero-ulnar joint; arrows = direction of movements; red = flexion; black = extension.

Synovial sheaths of flexor tendons (palmar aspect of right hand, semischematic drawing). The **flexor retinaculum** protects the flexor tendons passing through the carpal tunnel (arrow).

Joints are moved by muscles. The highly differentiated movements are coordinated by special groups of muscles (**synergists**). Their counterparts are called **antagonists**. Movements can only be carried out harmoniously if the contraction of the synergists are supported by a corresponding dilatation of the antagonists. This interaction is

controlled by the nervous system. In order to carry out certain directions of movements, often the tendons of muscles have to be directed by ligaments. At those places, the tendons often develop synovial sheaths, e.g., at the wrist joint or at the fingers.

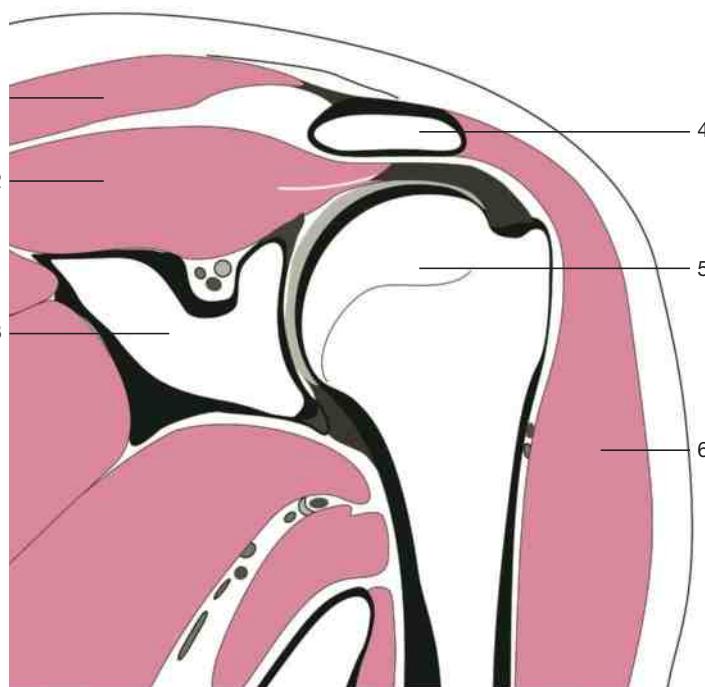

Shoulder joint (MRI scan, coronal section) (from Heuck et al., MRT-Atlas, 2009).

Heart and related vessels *in situ* (anterior aspect). Anterior thoracic wall, pericardium, and epicardium have been removed. The trachea is divided.

- | | |
|--------------------|-------------------|
| 1 Aorta | 4 Left heart |
| 2 Pulmonary artery | 5 Diaphragm |
| 3 Right heart | 6 Abdominal aorta |

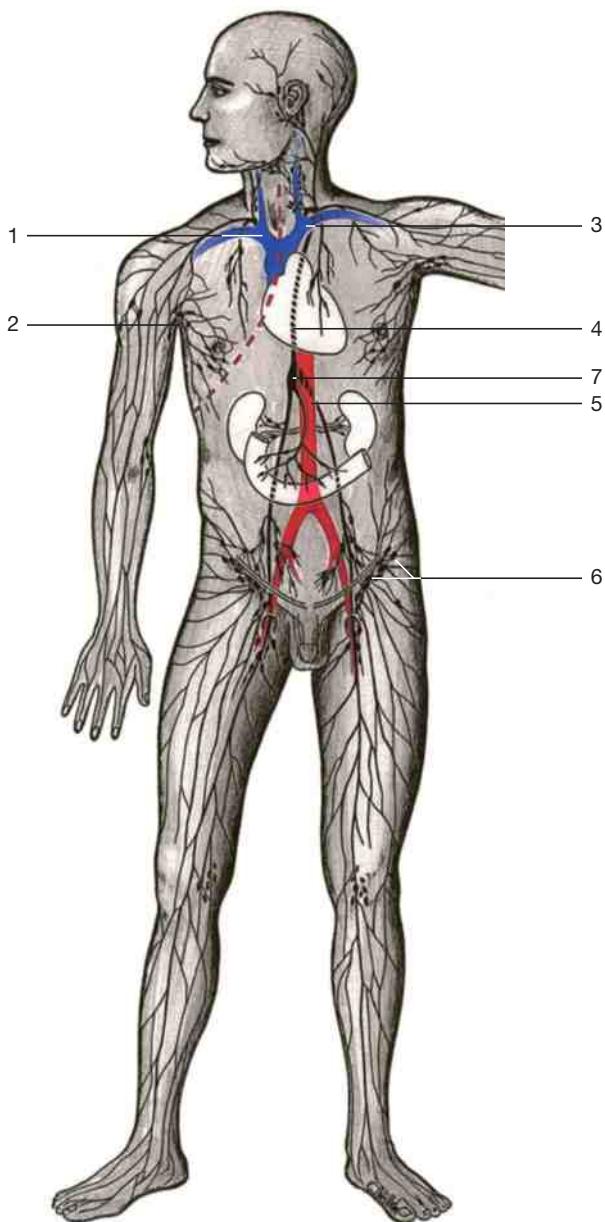

Organization of the circulatory systems in the human body.

The center of this system represents the heart. Red = arteries; blue = veins (from Lütjen-Drecoll, Rohen, Innenansichten des menschlichen Körpers, 2010).

A = pulmonary circulation C = portal circulation
B = systemic circulation D = lymphatic circulation

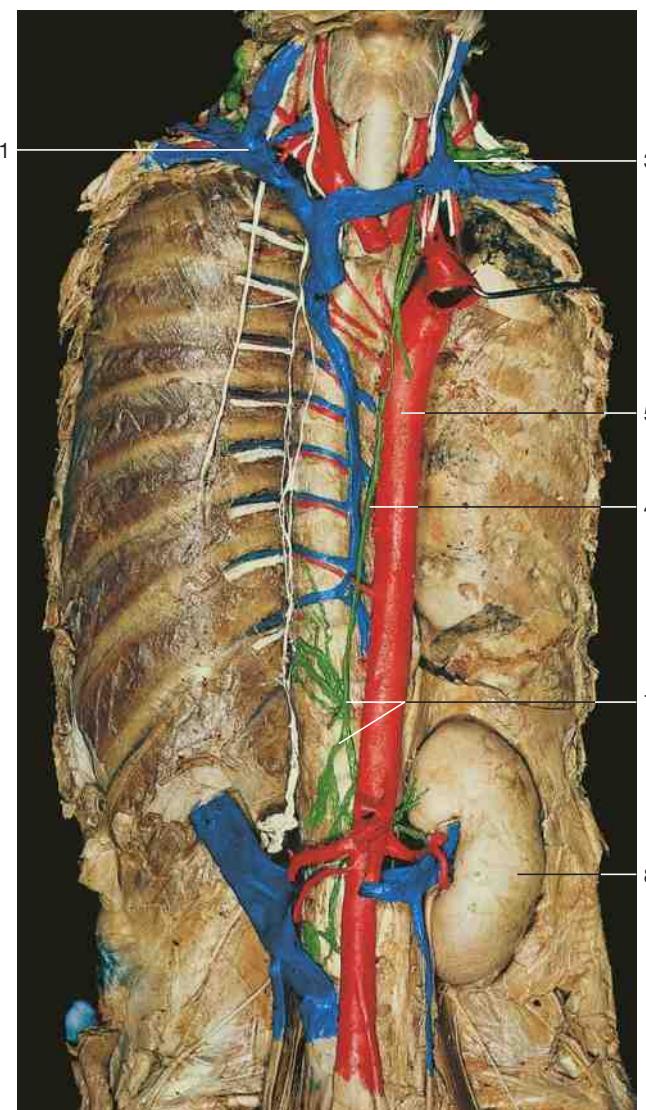

Organization of the circulatory system with the heart in the center. Red = arteries; blue = veins (from Lütjen-Drecoll, Rohen, Innenansichten des menschlichen Körpers, 2010).

The center of the circulatory system is the heart, which is situated in the thoracic cavity and in contact with the diaphragm. In the right ventricle, the venous blood is collected and pumped through the pulmonary artery and into the lung where the blood is oxygenated. The veins of the lung transport the blood to the left ventricle, where it is pumped through the aorta and its branches (arteries) in the human body. Arteries and veins mostly run parallel. The venous blood from the intestine reaches the liver via the portal vein.

Organization of the lymphatic system.

Course of the main lymphatic vessels and lymph nodes in the body. Dotted red line = border between lymphatic vessels draining toward the right and the left venous angles.

Major lymph vessels of the trunk (green). Blue = veins, red = arteries, white = nerves.

- | | |
|------------------------|------------------------|
| 1 Right venous angle | 5 Aorta |
| 2 Axillary lymph nodes | 6 Inguinal lymph nodes |
| 3 Left venous angle | 7 Cisterna chyli |
| 4 Thoracic duct | 8 Left kidney |

Lymphatic vessels originate in the tissue spaces (lymph capillaries) and unite to form larger vessels (lymphatics). These resemble veins but have a much thinner wall, more valves, and are interrupted by lymph nodes at various intervals. Large groups of lymph nodes are located in the inguinal and axillary regions, deep to the mandible and

sternocleidomastoid muscle, and within the root of the mesentery of the intestine. The lymphatic vessels of the right half of the head and neck, the right thorax, and the right upper limb drain toward the right venous angle; those of the rest of the body, toward the left venous angle.

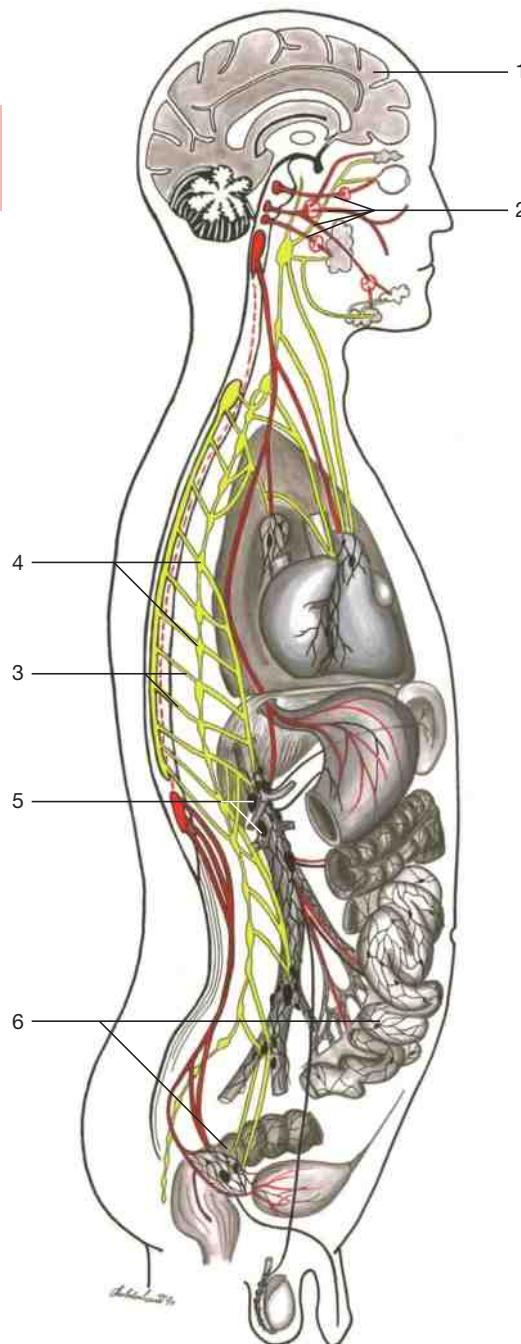

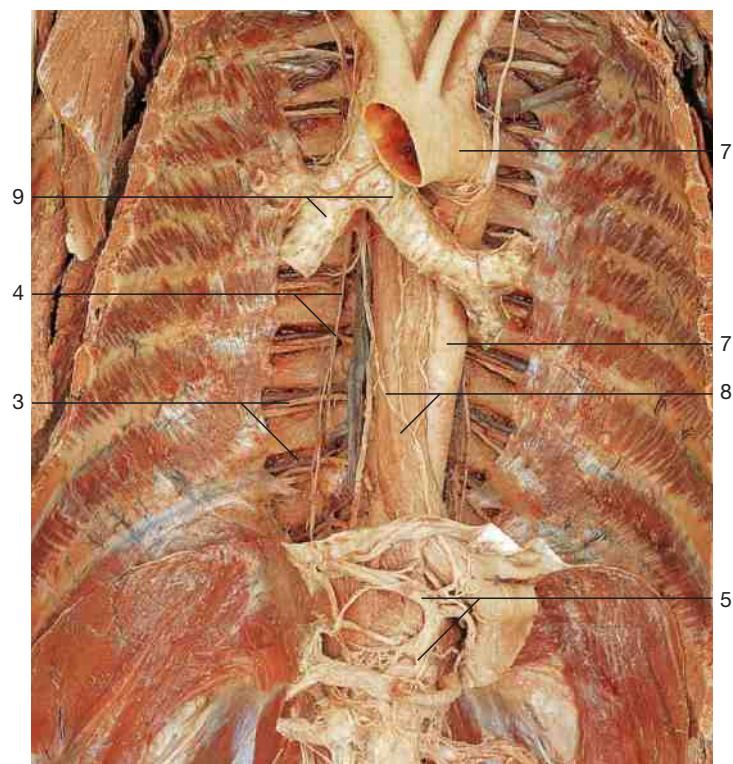

Diagram illustrating the **localization of the three functional portions of the nervous system** (brain, spinal cord and autonomic nervous system).
Yellow = sympathetic system;
red = parasympathetic system.

Posterior part of the trunk. The **solar plexus** with its connection to the vagus nerve and the sympathetic trunk has been dissected.

- | | |
|---------------------|--|
| 1 Cerebrum | 6 Nervous plexus of the autonomic system |
| 2 Cranial nerves | 7 Aorta |
| 3 Spinal nerves | 8 Vagus nerve and esophagus |
| 4 Sympathetic trunk | 9 Bifurcation of trachea |
| 5 Solar plexus | |

The nervous system can be divided into three functionally distinct parts:

1. The cranial part, which comprises the great sensory organs and the brain.
2. The spinal cord, which shows a segmental structure and serves predominantly as a reflex organ.
3. The autonomic nervous system, which controls the involuntary functions (subconscious control) of organs and tissues. The autonomic part of the nervous system forms many delicate plexuses near or within the organs.

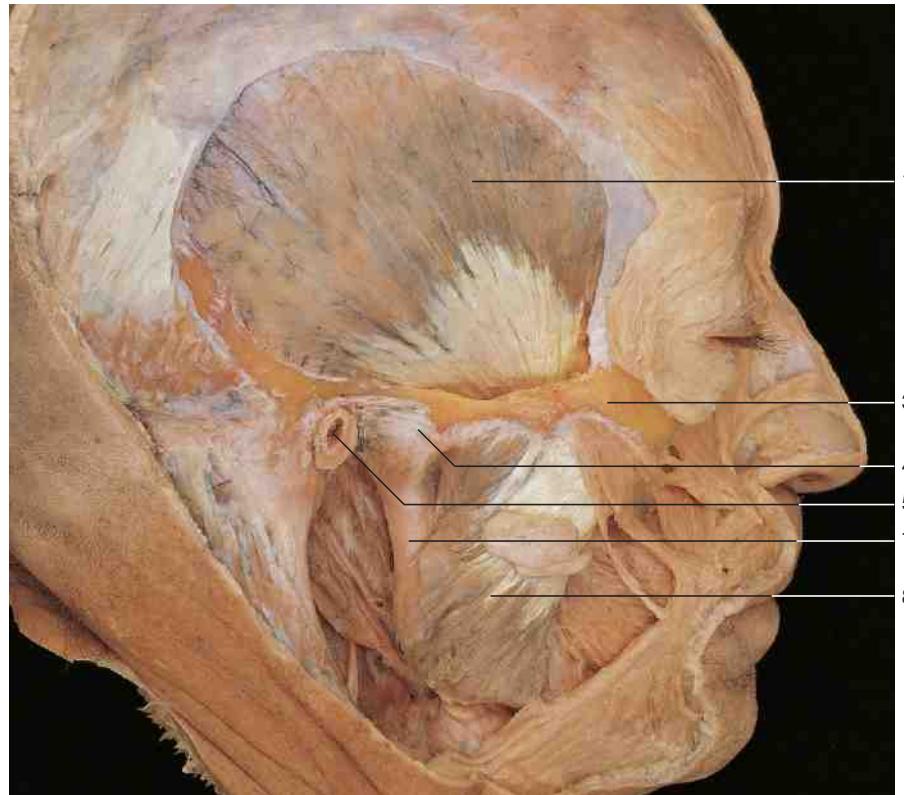

At certain places these plexuses contain aggregations of nerve cells (prevertebral and intramural ganglia).

The spinal nerves leave the spinal cord at regular intervals. The ventral rami of the spinal nerves form the cervical and brachial plexus, which innervates the upper extremity, and the ventral rami of the lumbar and sacral spinal nerves form the lumbosacral plexus, which innervates the pelvis and genital organs and the lower extremity.

2 Head and Neck

2.1 Skull and Muscles of the Head

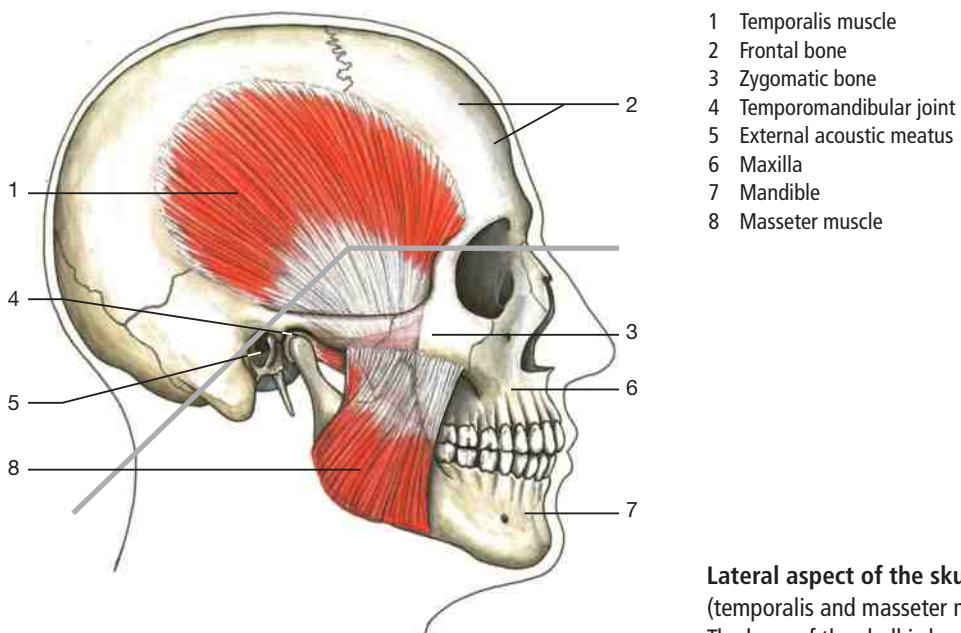

Muscles of mastication and facial muscles (lateral aspect).

The auricle has been removed.

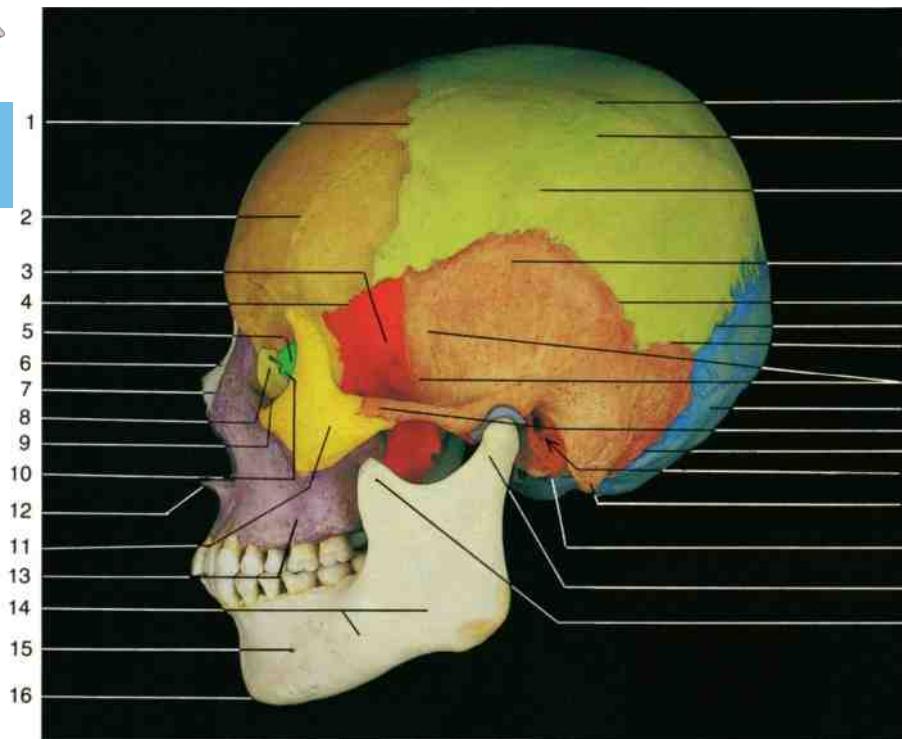

The head contains the brain and the great sensory organs (neurocranium). Anteriorly, the facial bones, the facial muscles, and the muscles of mastication have been developed (viscerocranum). The base of the skull is slightly bent so that the structures of the viscerocranum become located underneath the neurocranium, a specificity of the human head. Therefore mimic movements are possible in the human face.

Anterior aspect of the skull.

The skull comprises a mosaic of numerous complicated bones that form the cranial cavity protecting the brain (**neurocranium**) and several cavities such as the nasal and oral cavities in the facial region. The neurocranium consists of large bony plates that develop directly from the surrounding sheets of connective tissue (**desmocranum**).

The bones of the skull base are formed out of cartilaginous tissue (**chondrocranium**), which ossifies secondarily. The **visceral skeleton**, which in fish gives rise to the gills, has in higher vertebrates been transformed into the bones of the masticatory and auditory apparatus (maxilla, mandible, auditory ossicles, and hyoid bone).

Bones

Brown	= frontal bone
Light green	= parietal bone
Dark brown	= temporal bone
Red	= sphenoidal bone
Yellow	= zygomatic bone
Dark green	= ethmoidal bone
Yellow	= lacrimal bone
Orange	= vomer
Violet	= maxilla
White	= nasal bone
White	= mandible

The following series of figures are arranged so that the mosaic-like pattern of the skull becomes understandable. It starts with the bones of the **skull base** (sphenoidal and occipital bones) to which the other bones are added step by

step. The facial skeleton is built up by the ethmoidal bone to which the palatine bone and maxilla are attached laterally; the small nasal and lacrimal bones fill the remaining spaces. Cartilages remain only in the external part of the nose.

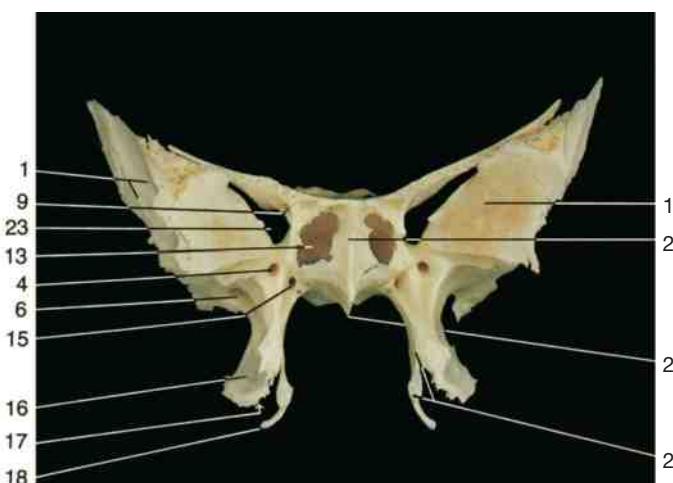

Sphenoidal and occipital bone (from above).

Skull of the newborn (superior aspect). Calvaria.

Skull of the newborn (lateral aspect).

Cranial skeleton

- 1 Frontal tuber or eminence
- 2 Parietal tuber or eminence
- 3 Occipital tuber or eminence
- 4 Squamous part of temporal bone
- 5 Greater wing of sphenoidal bone

Facial skeleton

- 6 Maxilla
- 7 Mandible
- 8 Zygomatic bone
- 9 Nasal bone

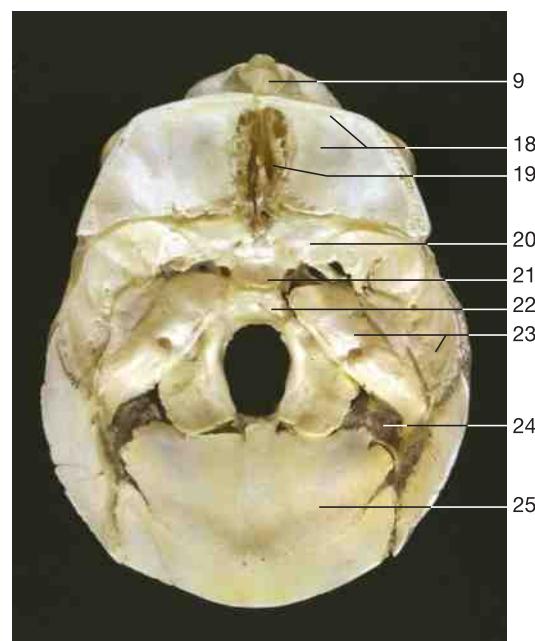

Sutures and fontanelles

- 10 Frontal suture
- 11 Coronal suture
- 12 Sagittal suture
- 13 Lambdoid suture
- 14 Anterior fontanelle
- 15 Posterior fontanelle
- 16 Sphenoidal (anterolateral) fontanelle
- 17 Mastoid (posterolateral) fontanelle

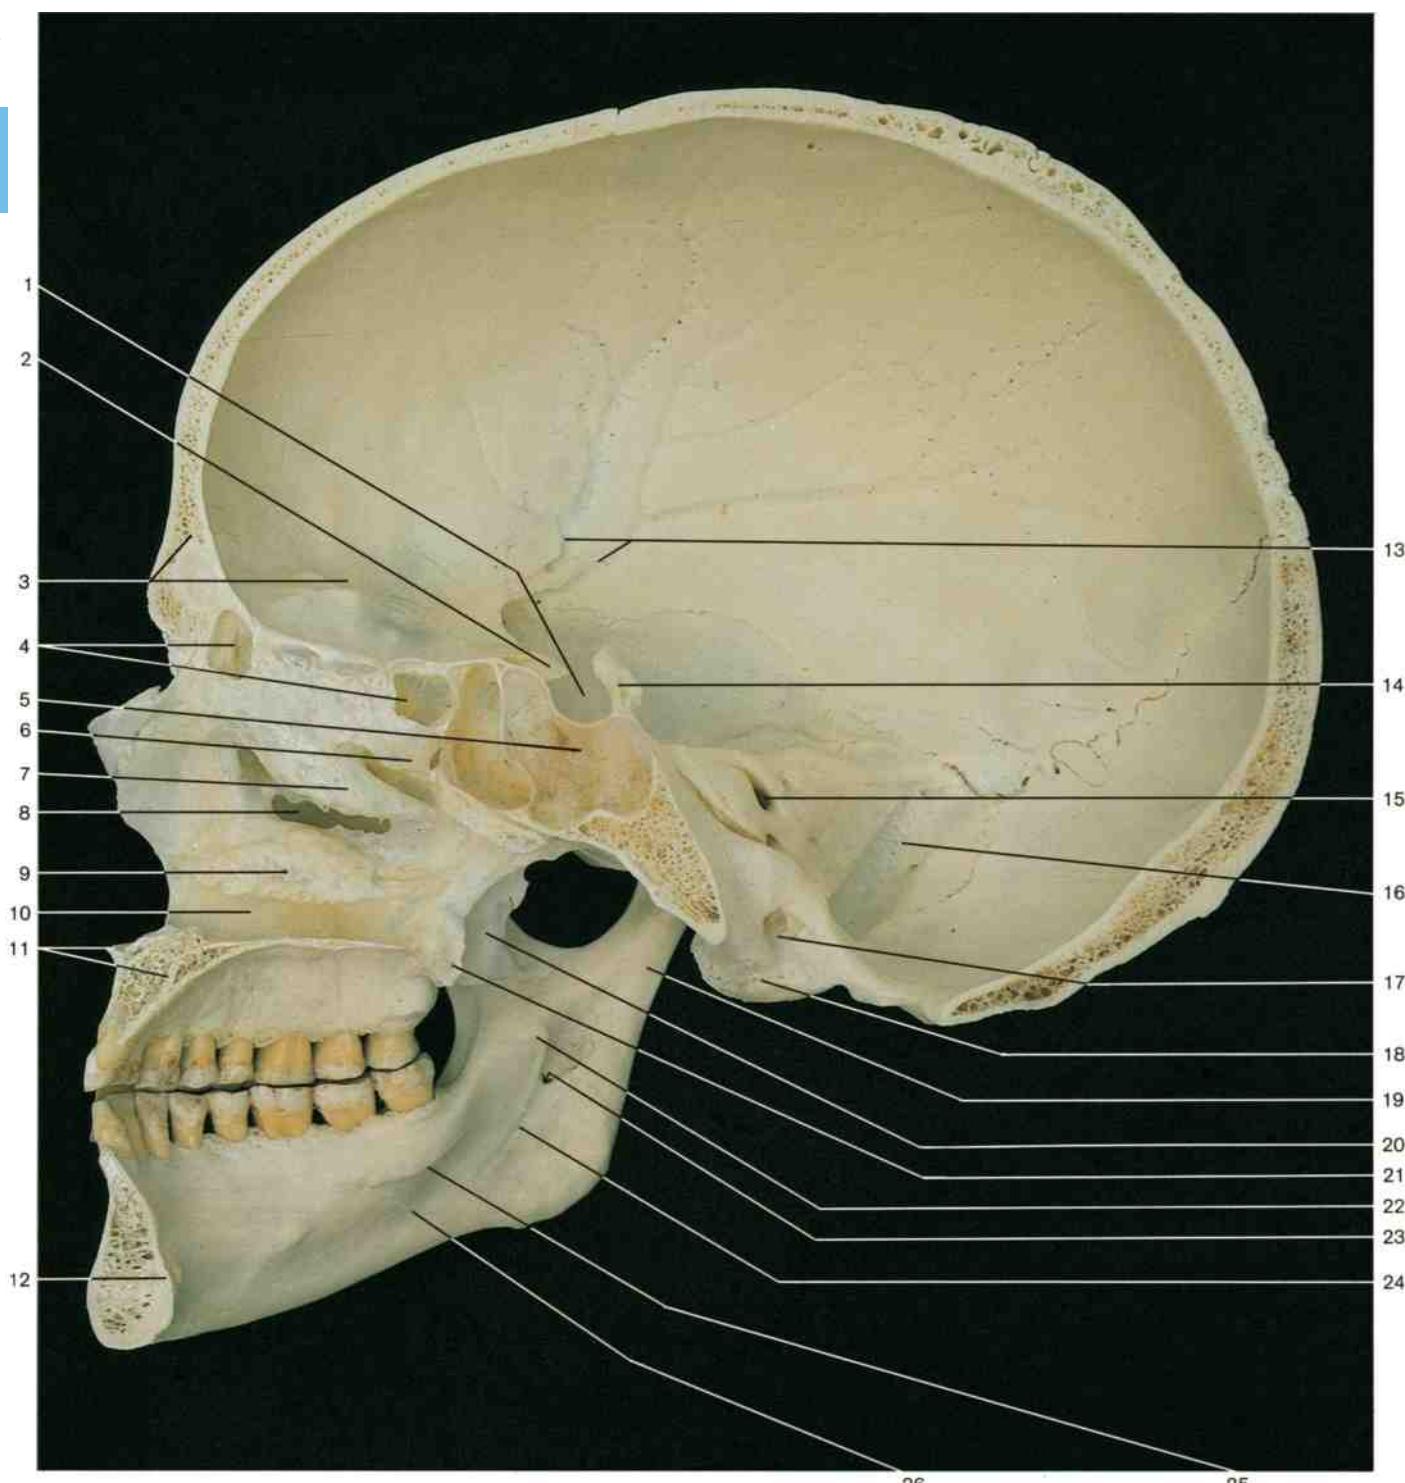

Base of the skull

- 18 Frontal bone
- 19 Ethmoidal bone
- 20 Sphenoidal bone
- 21 Hypophysial fossa (sella turcica)
- 22 Dorsum sellae
- 23 Temporal bone
- 24 Mastoid (posterolateral) fontanelle
- 25 Occipital bone

In the newborn, the facial skeleton, in contrast to the cranial skeleton, appears relatively small. There are no teeth presenting. The bones of the cranium are separated by wide fontanelles.

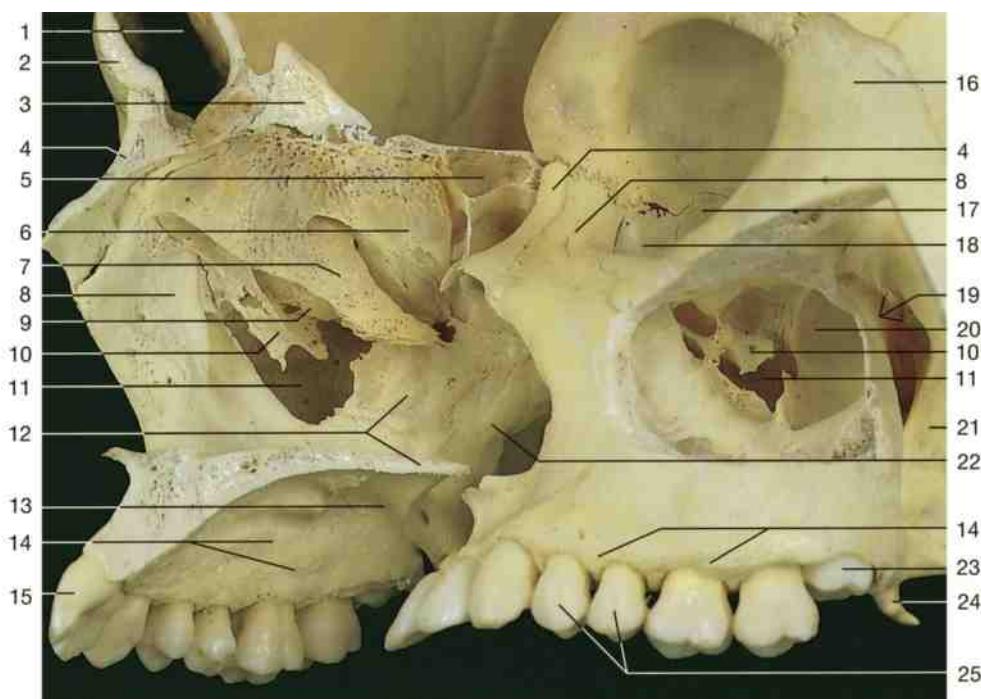

Base of the skull of the newborn (internal aspect).

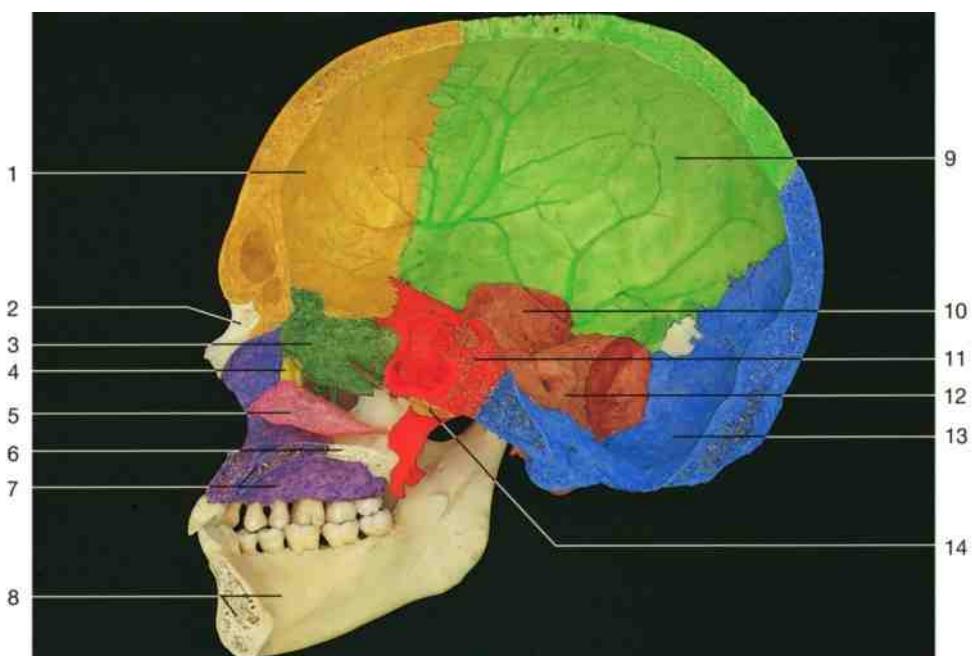

Median section through the skull, right half (internal aspect).

- | | |
|---------------------------------------|--|
| 1 Hypophysial fossa (sella turcica) | 14 Dorsum sellae |
| 2 Anterior clinoid process | 15 Internal acoustic meatus |
| 3 Frontal bone | 16 Groove for sigmoid sinus |
| 4 Ethmoidal air cells | 17 Hypoglossal canal |
| 5 Sphenoidal sinus | 18 Occipital condyle |
| 6 Superior concha | 19 Condylar process |
| 7 Middle concha | 20 Lateral pterygoid plate |
| 8 Maxillary hiatus | 21 Medial pterygoid plate } of pterygoid process |
| 9 Inferior concha | 22 Lingula of mandible |
| 10 Inferior meatus | 23 Mandibular foramen |
| 11 Anterior nasal spine and maxilla | 24 Mylohyoid groove |
| 12 Mental spine or genial tubercle | 25 Mylohyoid line |
| 13 Groove for middle meningeal artery | 26 Submandibular fovea |

- 1 Frontal sinus
2 Frontal bone
3 Crista galli
4 Nasal bone
5 Sphenoidal sinus
6 Superior concha } of ethmoidal bone
7 Middle concha
8 Frontal process of maxilla
9 Ethmoidal bulla
10 Uncinate process
11 Maxillary hiatus
12 Palatine bone
13 Greater palatine foramen
14 Alveolar process of maxilla
15 Central incisor
16 Zygomatic bone
17 Ethmoidal bone
18 Lacrimal bone
19 Pterygopalatine fossa
20 Maxillary sinus
21 Lateral pterygoid plate
22 Medial pterygoid plate
23 Third molar tooth
24 Pterygoid hamulus
25 Two premolar teeth

Facial part of the skull (viscerocranium), divided in two halves (lateral and medial aspect). Right inferior concha has been removed to show the maxillary hiatus. Left maxillary sinus opened.

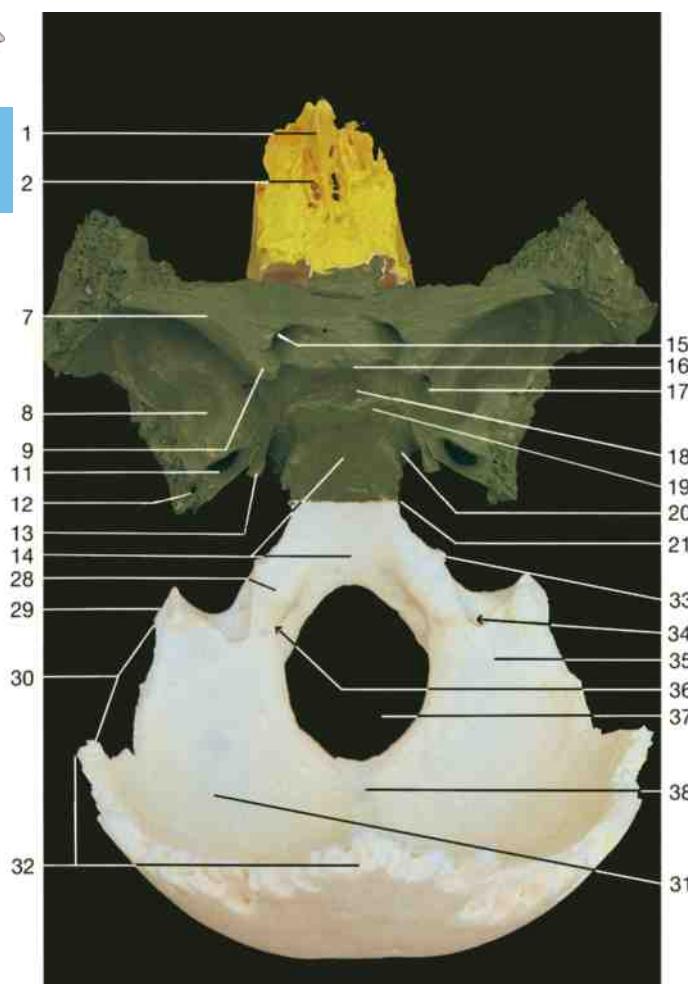

- Bones (indicated by colors)**
- 1 Frontal bone (yellow)
2 Nasal bone (white)
3 Ethmoidal bone (dark green)
4 Lacrimal bone (yellow)
5 Inferior nasal concha (pink)
6 Palatine bone (white)
7 Maxilla (violet)
8 Mandible (white)
9 Parietal bone (light green)
10 Temporal bone (brown)
11 Sphenoidal bone (red)
12 Petrous part of temporal bone (brown)
13 Occipital bone (blue)
14 Ala of vomer (light brown)

Median section through the skull. The nasal septum has been removed.
Bones indicated by colors.

Because of the upright posture that the human developed in the course of evolution, the cranial cavity greatly increased in size, whereas the facial skeleton decreased. As a result, the base of the skull developed an angulation of

about 120° between the clivus and the cribriform plate (see drawing on page 19). The hypophysial fossa containing the pituitary gland lies at the angle formed between these two planes.

Part of the disarticulated base of the skull.

Ethmoidal, sphenoidal, and occipital bones (from above).

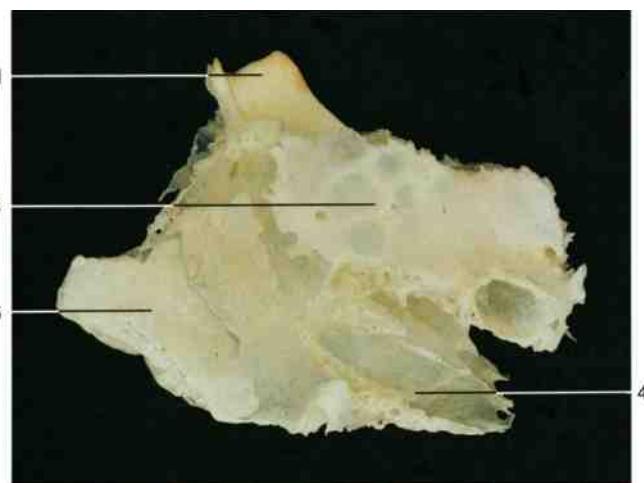

Green = sphenoidal bone; yellow = ethmoidal bone.

Ethmoidal bone

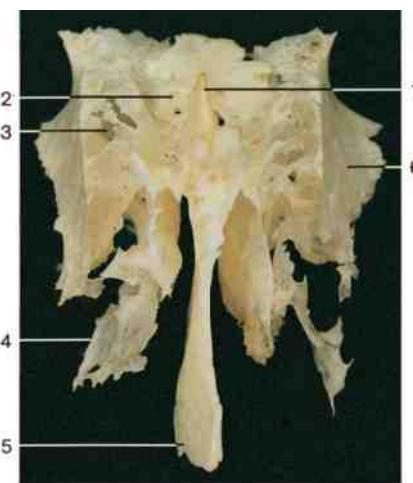

- 1 Crista galli
- 2 Cribriform plate
- 3 Ethmoidal air cells
- 4 Middle concha
- 5 Perpendicular plate (part of nasal septum)
- 6 Orbital plate

Sphenoidal bone

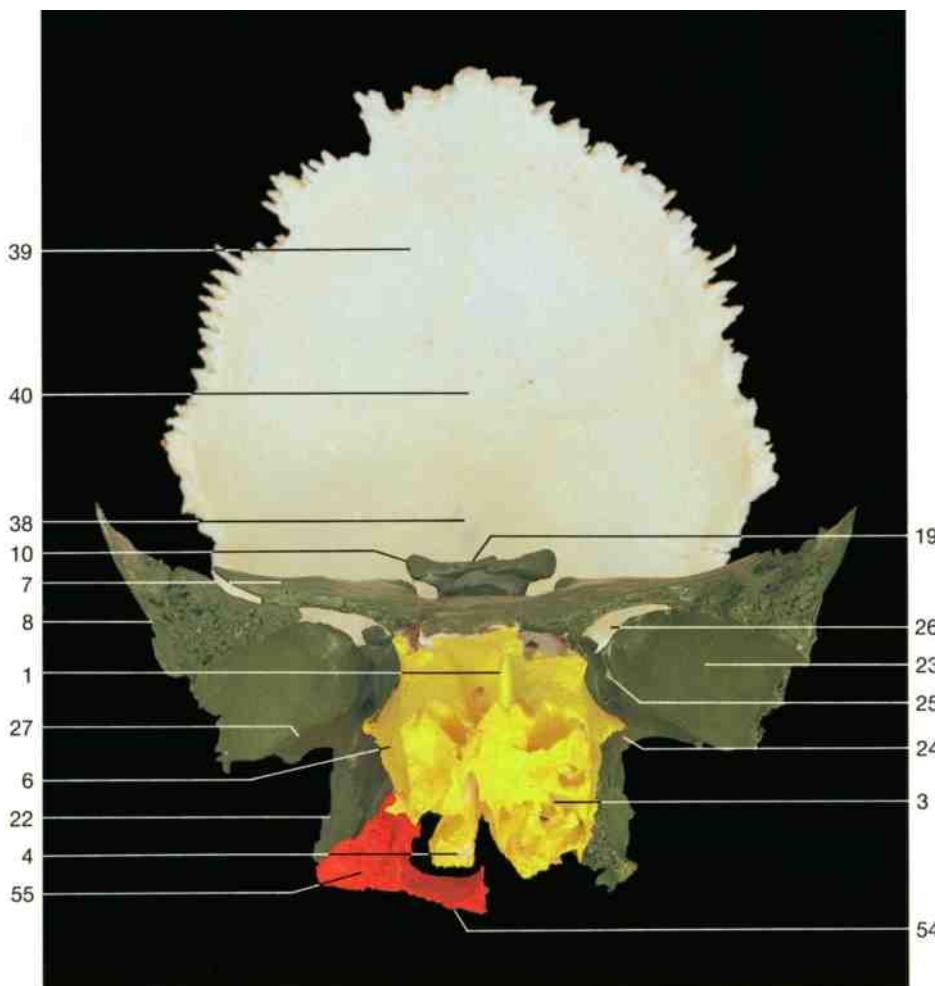

- 7 Lesser wing
- 8 Greater wing
- 9 Anterior clinoid process
- 10 Posterior clinoid process
- 11 Foramen ovale
- 12 Foramen spinosum
- 13 Lingula of the sphenoidal bone
- 14 Clivus
- 15 Optic canal
- 16 Tuberculum sellae
- 17 Foramen rotundum (right side)
- 18 Hypophysial fossa (sella turcica)
- 19 Dorsum sellae
- 20 Carotid sulcus
- 21 Spheno-occipital synchondrosis
- 22 Lateral pterygoid plate
- 23 Greater wing of sphenoidal bone (orbital surface)
- 24 Greater wing of sphenoidal bone (maxillary surface)
- 25 Foramen rotundum (left side)
- 26 Superior orbital fissure
- 27 Infratemporal crest of the greater wing

Ethmoidal bone (lateral aspect), posterior portion to the right.

Ethmoidal bone (anterior aspect).

Disarticulated base of the skull (anterior aspect). Green = sphenoidal bone; yellow = ethmoidal bone; red = palatine bone.

- Occipital bone**
- 28 Jugular tubercle
 - 29 Jugular process
 - 30 Mastoid margin
 - 31 Posterior cranial fossa
 - 32 Lambdoid margin
 - 33 Infratemporal process
 - 34 Condylar canal
 - 35 Lateral part of occipital bone
 - 36 Hypoglossal canal
 - 37 Foramen magnum
 - 38 Internal occipital crest
 - 39 Squamous part of occipital bone
 - 40 Internal occipital protuberance

Maxilla

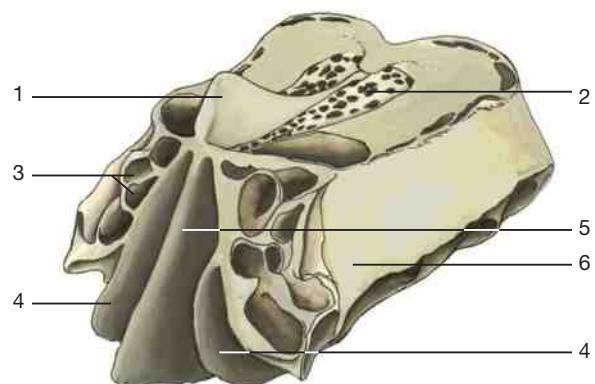

- 41 Orbital surface
- 42 Infra-orbital groove
- 43 Maxillary tuberosity with foramina
- 44 Frontal process
- 45 Nasolacrimal groove
- 46 Infra-orbital margin
- 47 Anterior nasal spine
- 48 Zygomatic process
- 49 Alveolar process

Palatine bone

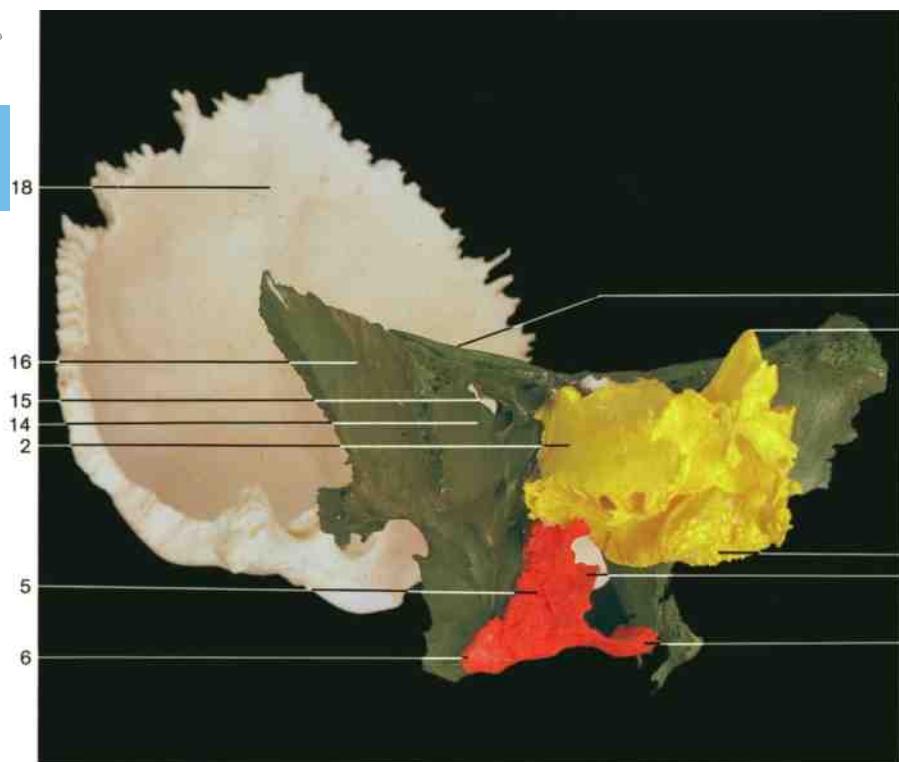

- 50 Orbital process
- 51 Sphenopalatine notch
- 52 Sphenoidal process
- 53 Perpendicular plate
- 54 Horizontal plate
- 55 Pyramidal process

Right maxilla, ethmoidal, and palatine bone (lateral aspect).

Ethmoidal bone (oblique anterior aspect).
(Schematic drawing.)

Part of a disarticulated skull base, similar to the preceding figures, but with palatine bone. Green = sphenoidal bone; yellow = ethmoidal bone; red = palatine bone.

Ethmoidal bone

- 1 Crista galli
- 2 Orbital plate
- 3 Middle concha

Palatine bone

- 4 Horizontal plate of palatine bone
- 5 Greater palatine canal
- 6 Pyramidal process
- 7 Maxillary process
- 8 Orbital process
- 9 Sphenopalatine notch
- 10 Perpendicular plate of palatine bone
- 11 Conchal crest
- 12 Nasal crest
- 13 Sphenoidal process

Sphenoidal bone

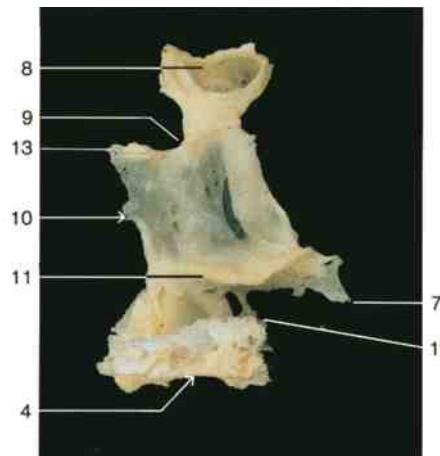

- 14 Greater wing
- 15 Superior orbital fissure
- 16 Greater wing (orbital surface)
- 17 Lesser wing

Occipital bone

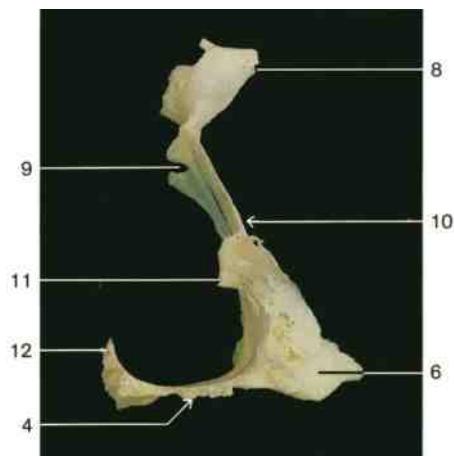

- 18 Squamous part of occipital bone

Maxilla

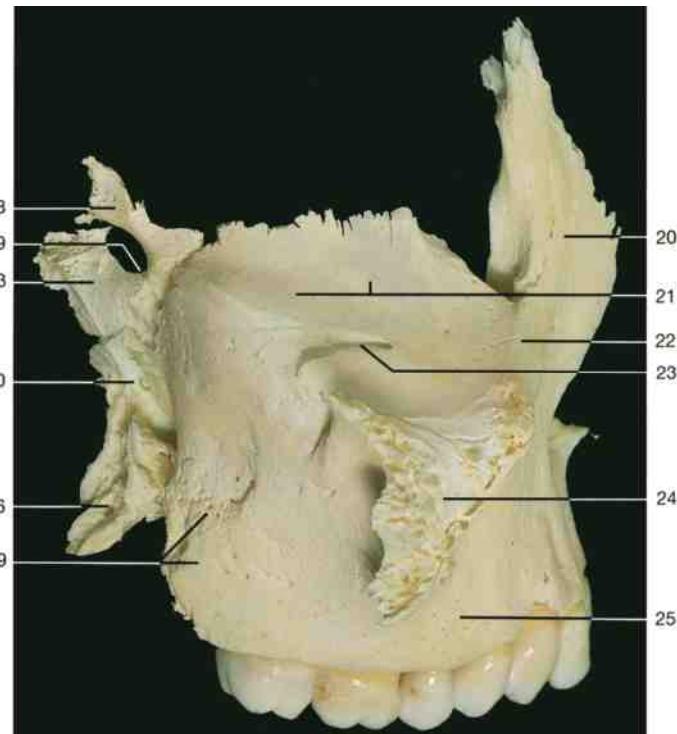

- 19 Maxillary tuberosity
- 20 Frontal process
- 21 Orbital surface
- 22 Infra-orbital margin
- 23 Infra-orbital groove
- 24 Zygomatic process
- 25 Alveolar process

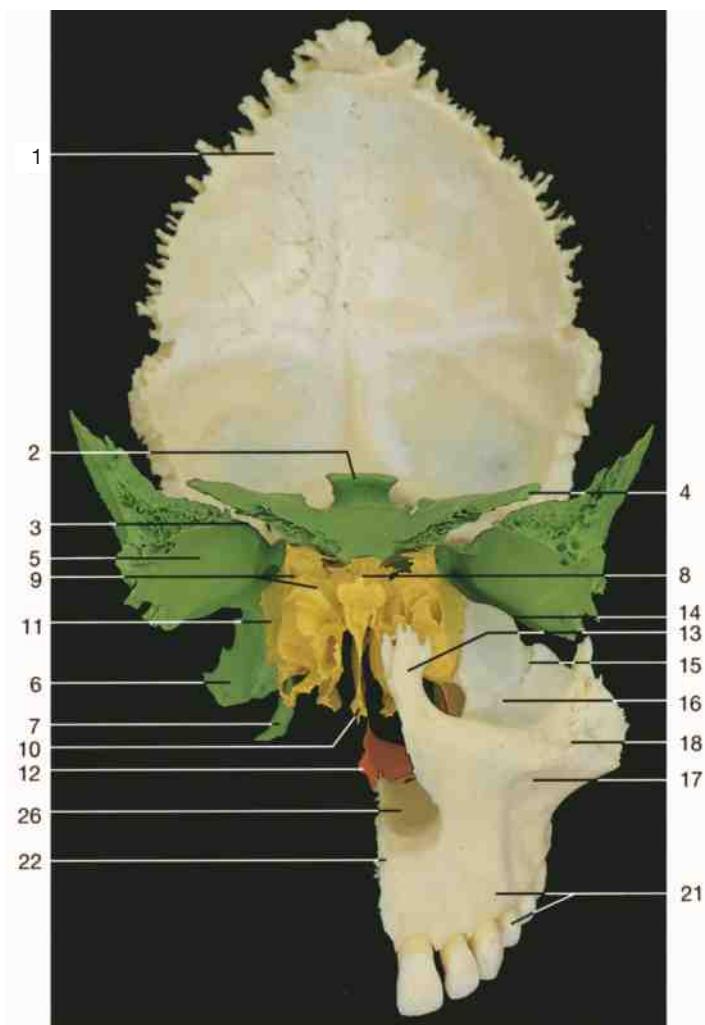

Left palatine bone (medial aspect, posterior aspect to the left).

Left palatine bone (anterior aspect).

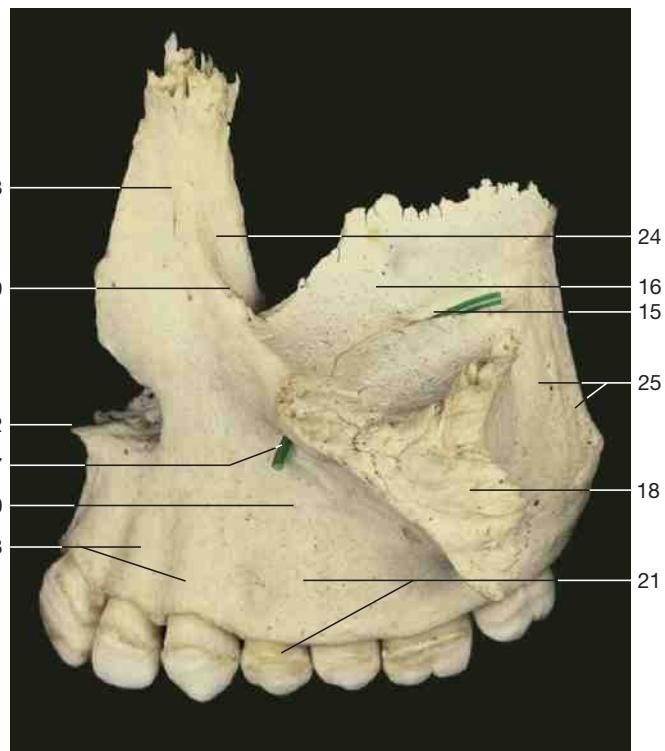

Right maxilla and right palatine bone (lateral aspect).

Part of a disarticulated skull.

The left maxilla is added to the preceding specimen.

Left maxilla (lateral aspect). Probe = infra-orbital canal.

Occipital bone

- 1 Squamous part

Sphenoidal bone

- 2 Dorsum sellae
- 3 Superior orbital fissure
- 4 Lesser wing
- 5 Greater wing (orbital surface)
- 6 Lateral pterygoid plate
- 7 Medial pterygoid plate

Ethmoidal bone

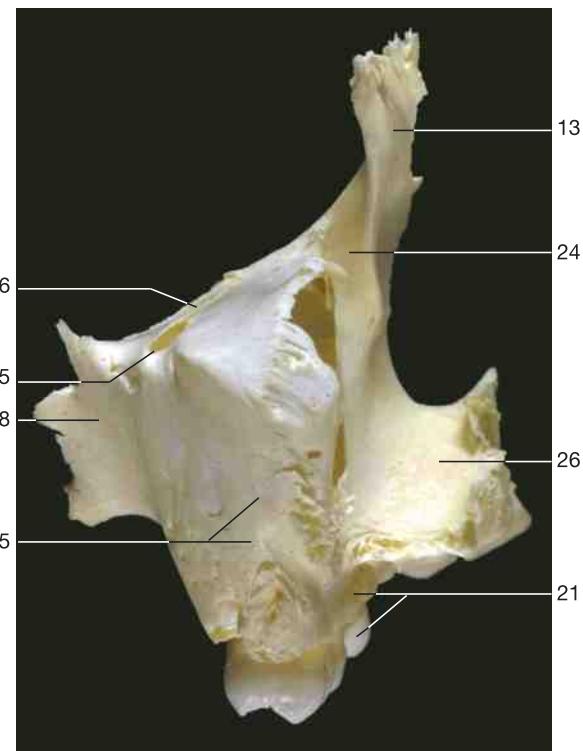

- 8 Crista galli
- 9 Ethmoidal air cells
- 10 Perpendicular plate
- 11 Orbital plate

Palatine bone

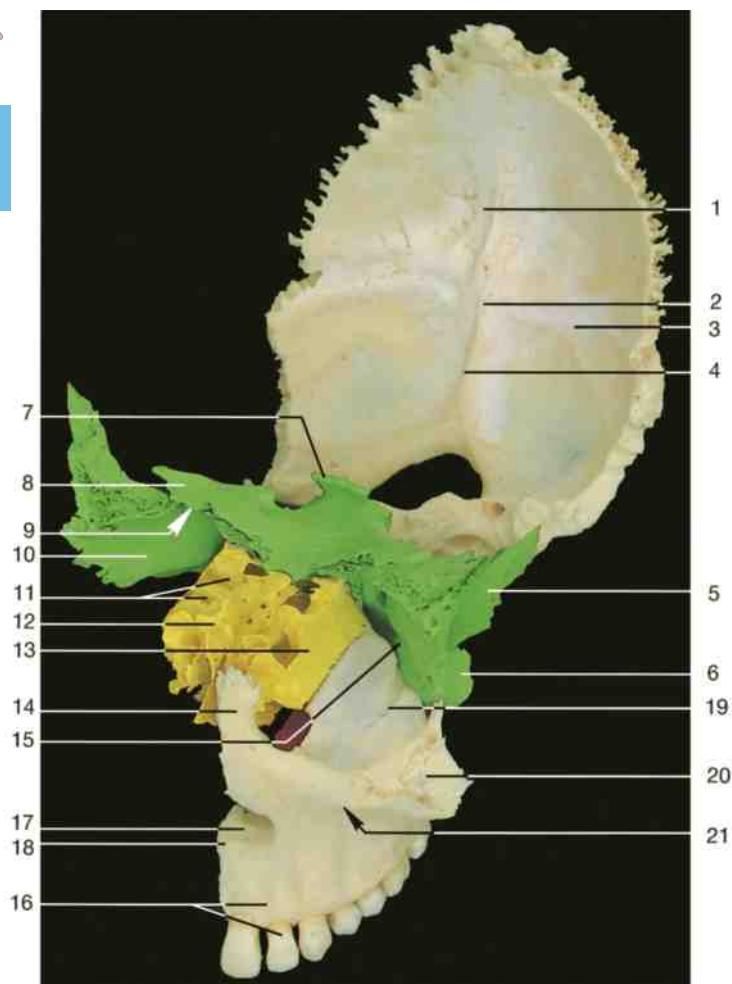

- 12 Horizontal plate (nasal crest)

Maxilla

- 13 Frontal process
- 14 Inferior orbital fissure
- 15 Infra-orbital groove
- 16 Orbital surface
- 17 Infra-orbital foramen
- 18 Zygomatic process
- 19 Anterior lacrimal crest
- 20 Canine fossa
- 21 Alveolar process with teeth
- 22 Anterior nasal spine
- 23 Juga alveolaria (elevations formed by roots of teeth)
- 24 Lacrimal groove
- 25 Maxillary tuberosity with alveolar foramina
- 26 Palatine process of maxilla

Left maxilla (posterior aspect).

Part of a disarticulated base of skull. The mosaic of the facial bones [sphenoidal bone (green), ethmoidal bone (yellow), and palatine bone (red)] is seen from the antero-lateral aspect.

Occipital bone

- 1 Groove for superior sagittal sinus
- 2 Internal occipital protuberance
- 3 Groove for transverse sinus
- 4 Internal occipital crest

Sphenoidal bone

- 5 Greater wing (temporal surface)
- 6 Lateral pterygoid plate
- 7 Dorsum sellae
- 8 Lesser wing
- 9 Superior orbital fissure
- 10 Greater wing (orbital surface)

Ethmoidal bone

- 11 Ethmoidal air cells
- 12 Crista galli
- 13 Orbital plate

Maxilla

- 14 Frontal process
- 15 Inferior orbital fissure
- 16 Alveolar process with teeth
- 17 Palatine process
- 18 Anterior nasal spine
- 19 Infra-orbital groove
- 20 Zygomatic process
- 21 Location of infra-orbital foramen
- 22 Middle nasal meatus
- 23 Inferior nasal meatus
- 24 Maxillary hiatus (leading to maxillary sinus)
- 25 Third molar
- 26 Lacrimal groove
- 27 Conchal crest
- 28 Body of maxilla (nasal surface)
- 29 Nasal crest
- 30 Incisive canal

Palatine bone

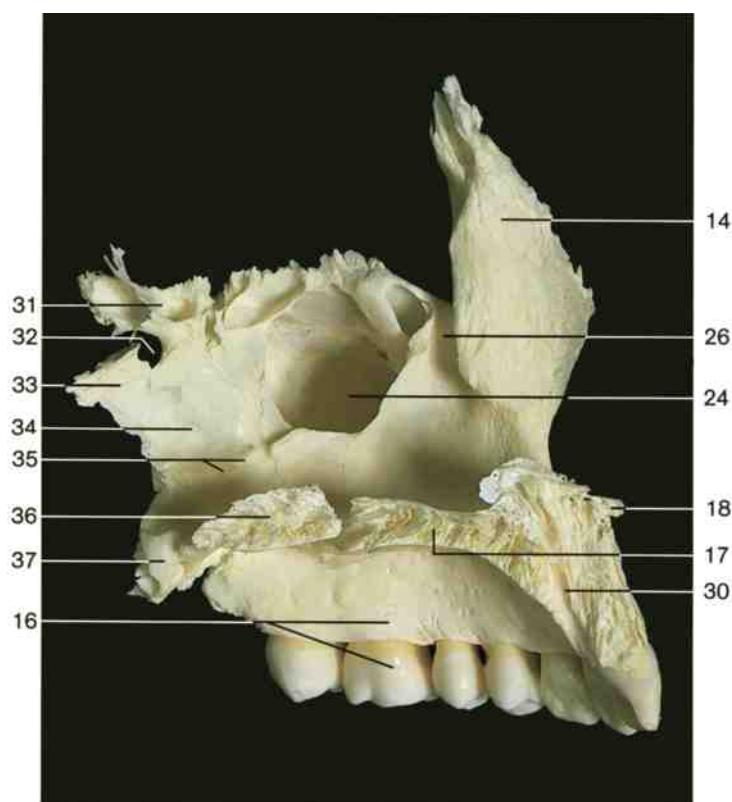

- 31 Orbital process
- 32 Sphenopalatine notch
- 33 Sphenoidal process
- 34 Perpendicular plate
- 35 Conchal crest
- 36 Horizontal plate
- 37 Pyramidal process

Frontal bone

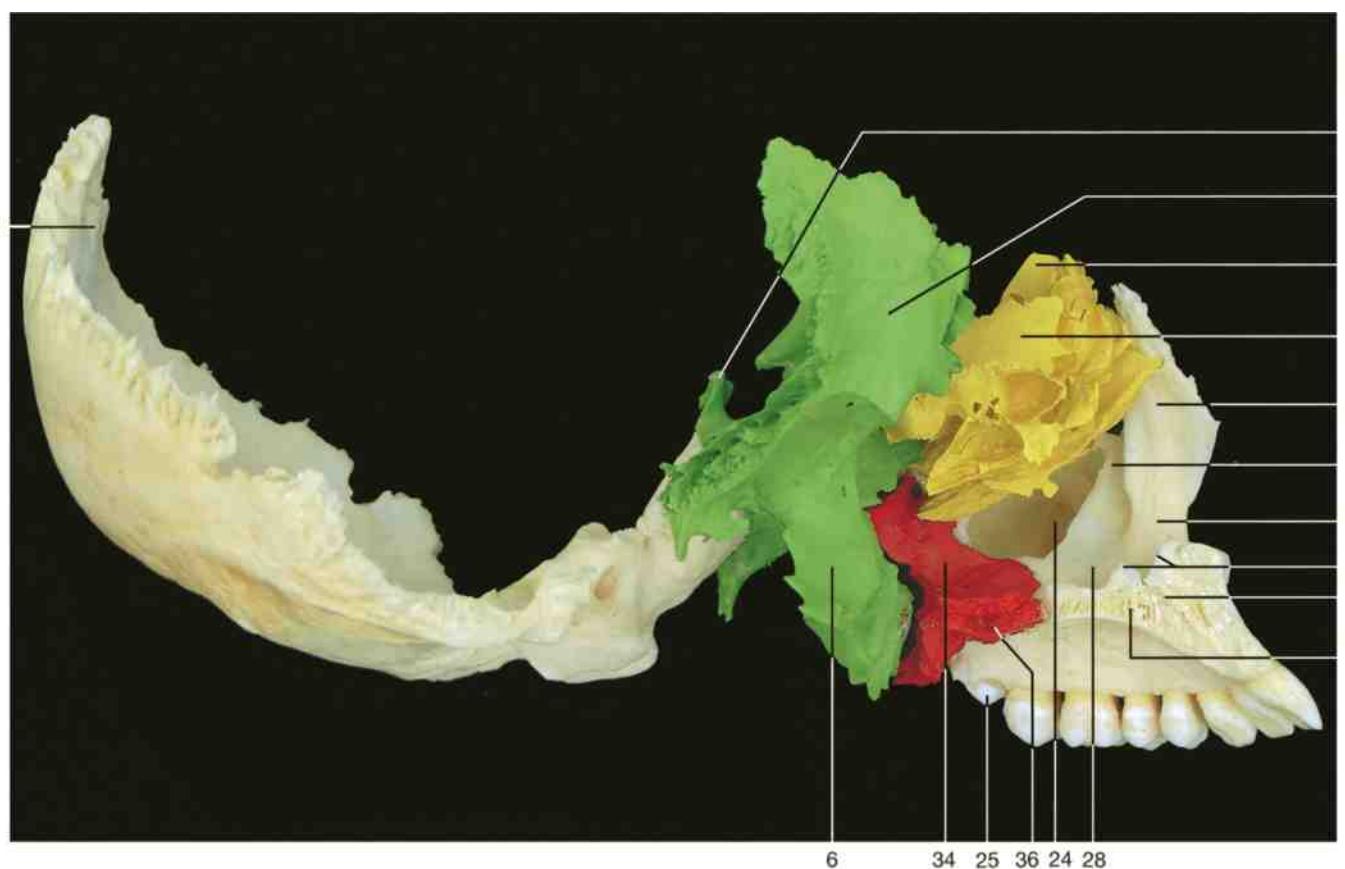

- 38 Squamous part
- 39 Supra-orbital foramen
- 40 Frontal notch
- 41 Frontal spine

Inferior nasal concha

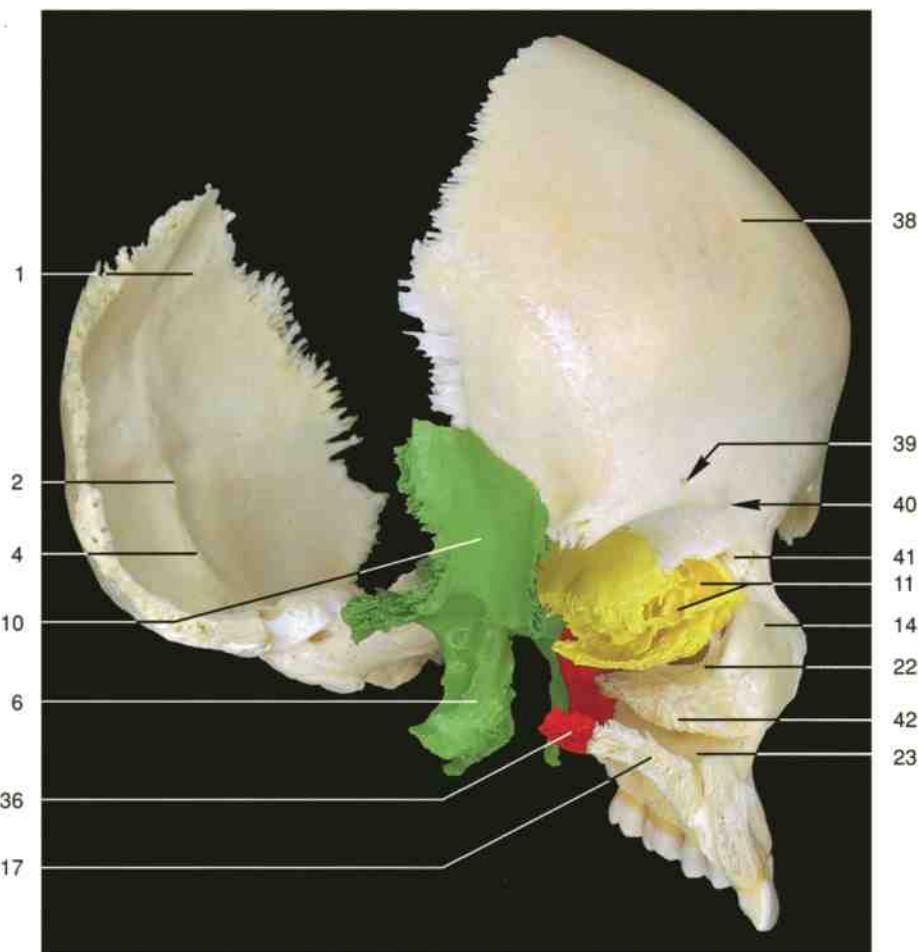

- 42 Inferior nasal concha with maxillary process

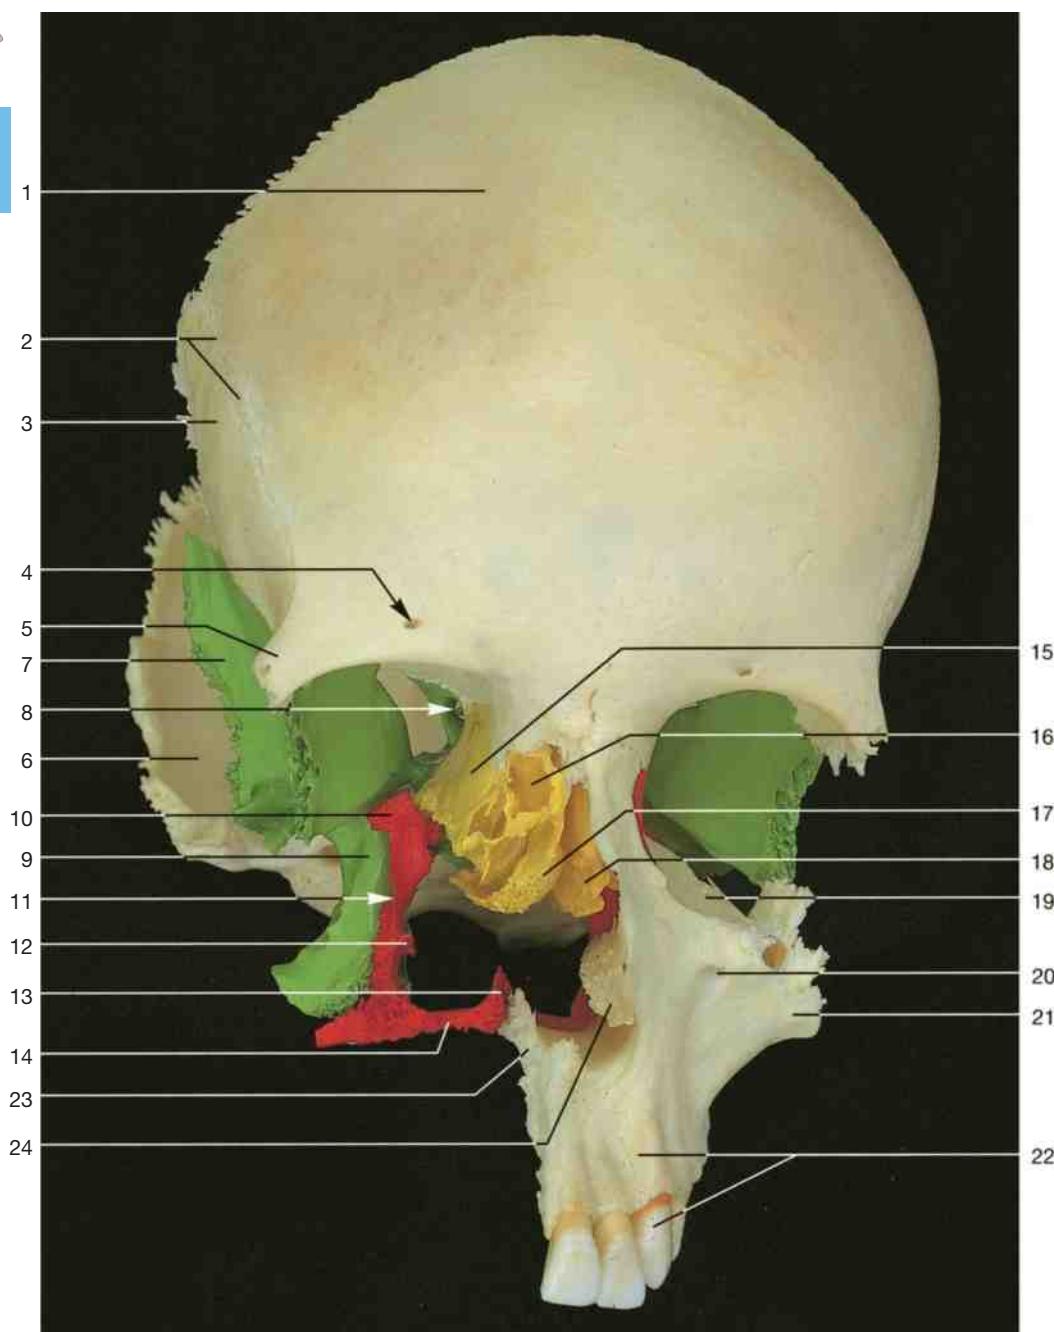

Left maxilla and palatine bone (medial aspect).

Part of a disarticulated base of skull (medial aspect). Green = sphenoidal bone; yellow = ethmoidal bone; red = palatine bone; natural colored = left maxilla.

Part of a disarticulated base of skull. The same specimen as shown above but with frontal bone (oblique-lateral aspect).

Part of a disarticulated skull showing the connection of the palatine bone (red) and the maxilla with ethmoidal bone (yellow) and sphenoidal bone (green) (anterior aspect).

Frontal bone

- 1 Squamous part
- 2 Inferior temporal line
- 3 Temporal surface
- 4 Supra-orbital foramen
- 5 Zygomatic process

Occipital bone

- 6 Squamous part

Sphenoidal bone

- 7 Greater wing (temporal surface)
- 8 Optic canal within the lesser wing
- 9 Lateral pterygoid plate

Palatine bone

- 10 Orbital process
- 11 Perpendicular plate
- 12 Conchal crest
- 13 Nasal crest
- 14 Horizontal plate

Ethmoidal bone

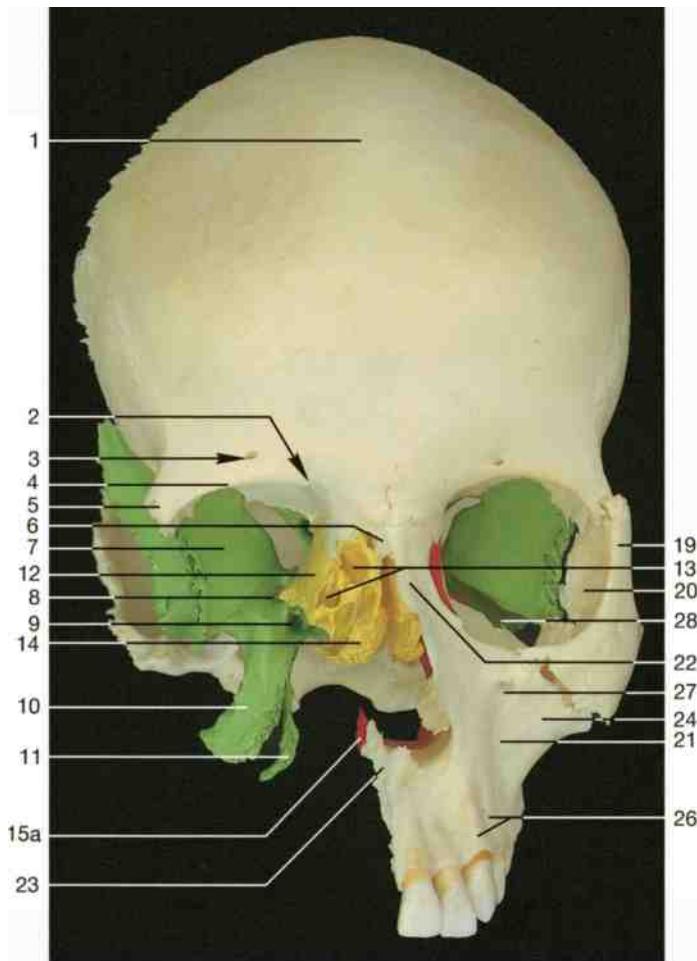

- 15 Orbital plate
- 16 Ethmoidal air cell
- 17 Middle concha
- 18 Perpendicular plate (part of bony nasal septum)

Maxilla

- 19 Infra-orbital groove
- 20 Infra-orbital foramen
- 21 Zygomatic process
- 22 Alveolar process with teeth
- 23 Palatine process

Left inferior nasal concha

- 24 Anterior part of inferior concha

Anterior view of a disarticulated skull showing the connection of the maxilla with the frontal and zygomatic bones. Yellow = ethmoidal bone; red = palatine bone; green = sphenoidal bone.

Frontal bone

- 1 Squamous part
- 2 Frontal notch
- 3 Supra-orbital foramen
- 4 Supra-orbital margin
- 5 Zygomatic process
- 6 Frontal spine

Sphenoidal bone

- 7 Greater wing (orbital surface)
- 8 Foramen rotundum
- 9 Pterygoid or Vidian canal
- 10 Lateral pterygoid plate
- 11 Medial pterygoid plate

Ethmoidal bone

- 12 Orbital plate
- 13 Ethmoidal air cells
- 14 Middle concha

Palatine bone

- 15 Horizontal plate
- 15a Nasal crest
- 16 Pyramidal process
- 17 Lesser palatine foramen
- 18 Greater palatine foramen

Zygomatic bone

- 19 Frontal process
- 20 Orbital surface
- Maxilla**
- 21 Canine fossa
- 22 Frontal process
- 23 Palatine process
- 24 Zygomatic process
- 25 Alveolar process and teeth
- 26 Juga alveolaria
- 27 Infra-orbital foramen
- 28 Infra-orbital groove
- 29 Anterior nasal aperture
- 30 Anterior nasal spine

Incisive bone

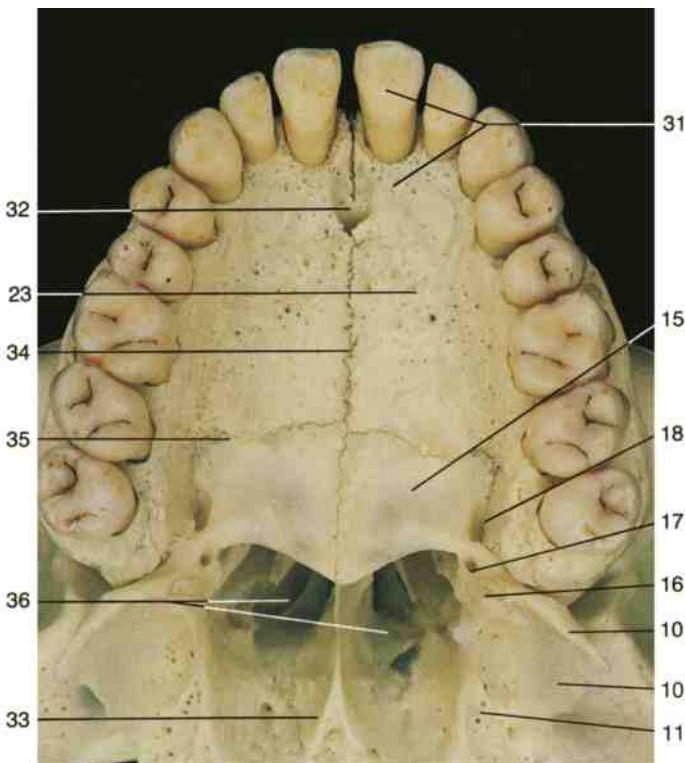

- 31 Central incisor and incisive bone or premaxilla
- 32 Incisive fossa

Vomer

- 33 Ala of the vomer

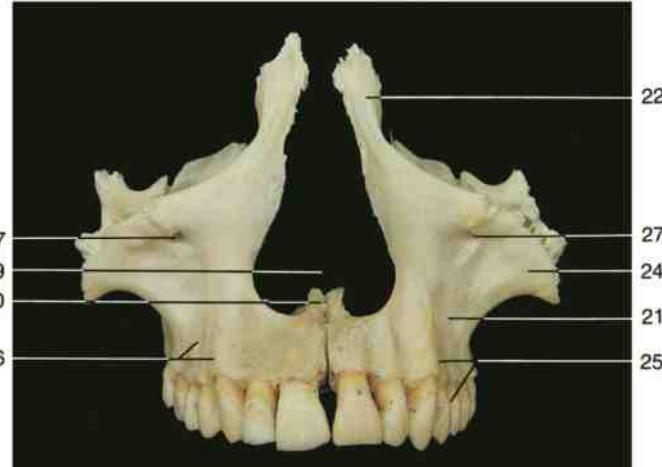

Sutures and choanae

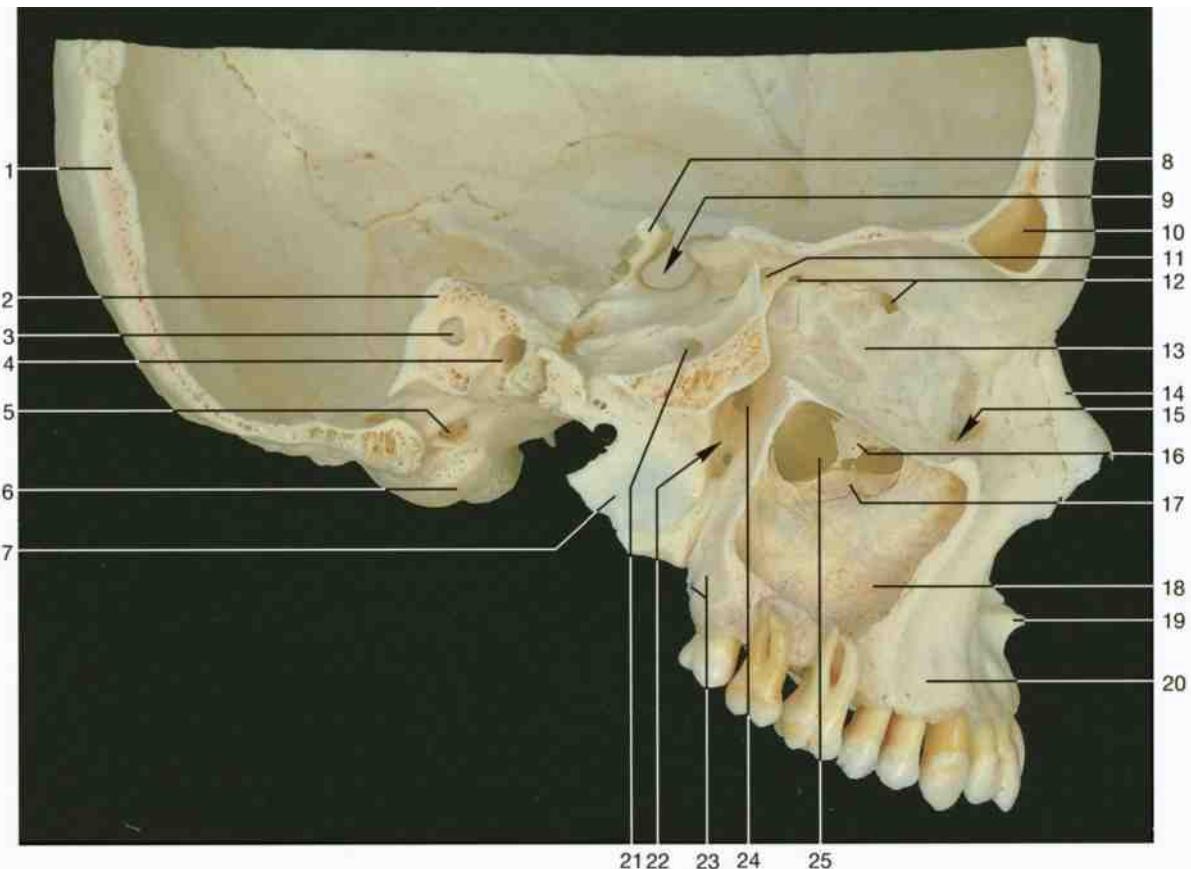

- 34 Median palatine suture
- 35 Transverse palatine suture
- 36 Choanae

Bony palate and teeth of the maxillae (from below).

Anterior view of both maxillae forming the anterior bony aperture of the nose.

Paramedian section through the skull, right side (lateral aspect). Frontal and maxillary sinuses are opened.

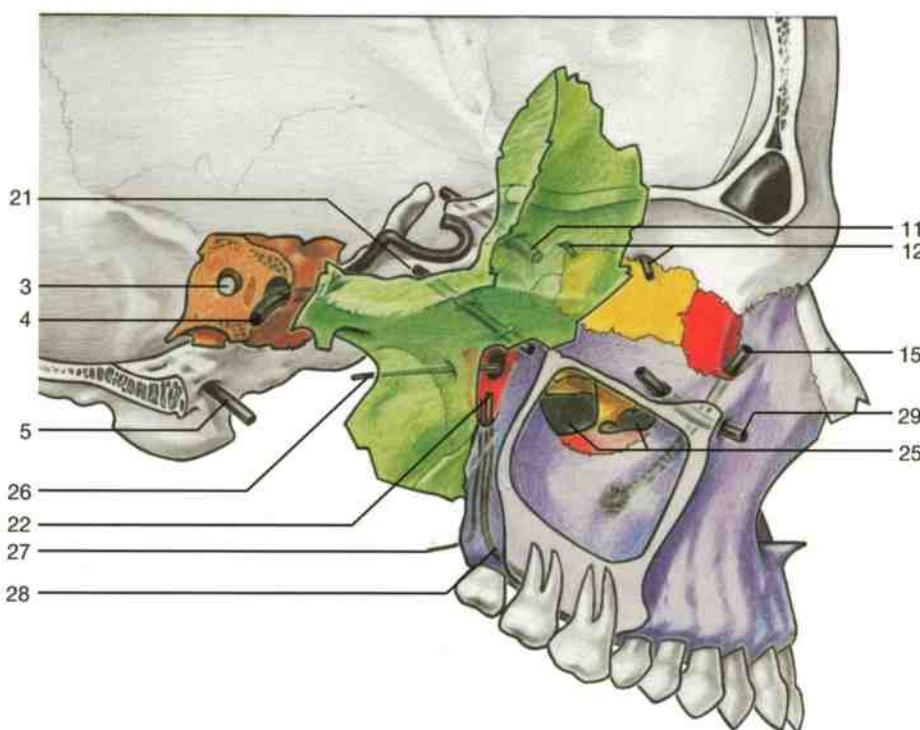

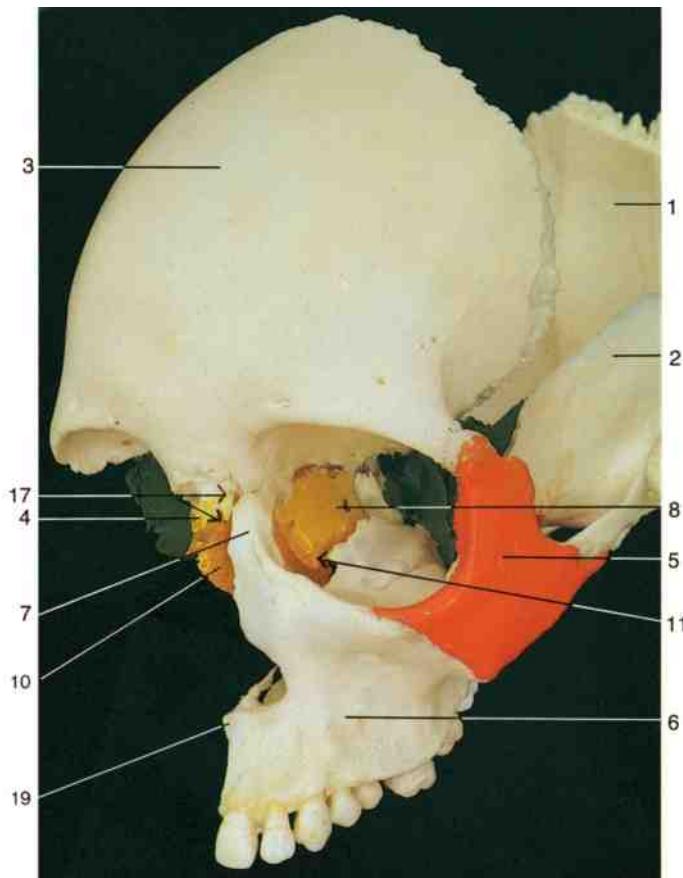

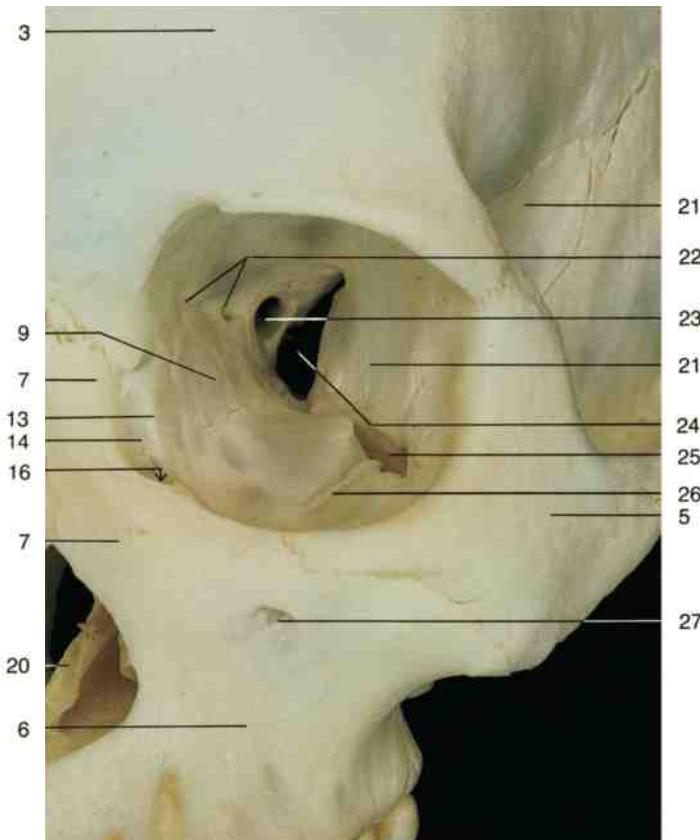

Illustration of canals and foramina connected with the right orbit and pterygopalatine fossa (compare the above figure). The greater wing of sphenoidal bone (green) is shown as being transparent. Brown = temporal bone; yellow = ethmoidal bone; red = lacrimal bone; light red = inferior nasal concha; violet = maxilla; red = palatine bone.

- 1: Occipital bone
- 2: Temporal bone (petrous part)
- 3: Internal acoustic meatus
- 4: Carotid canal
- 5: Hypoglossal canal
- 6: Occipital condyle
- 7: Lateral plate of pterygoid process
- 8: Dorsum of sella turcica
- 9: Sella turcica
- 10: Frontal sinus
- 11: Optic canal
- 12: Posterior and anterior ethmoidal foramina
- 13: Orbital plate of ethmoidal bone
- 14: Nasal bone
- 15: Nasolacrimal canal
- 16: Uncinate process
- 17: Inferior nasal concha (maxillary process)
- 18: Maxillary sinus
- 19: Anterior nasal spine
- 20: Alveolar process of maxilla
- 21: Foramen rotundum
- 22: Pterygopalatine fossa
- 23: Tuberosity of maxilla with alveolar foramina
- 24: Sphenopalatine foramen
- 25: Maxillary hiatus
- 26: Pterygoid or Vidian canal
- 27: Lesser palatine canal
- 28: Greater palatine canal
- 29: Infra-orbital canal

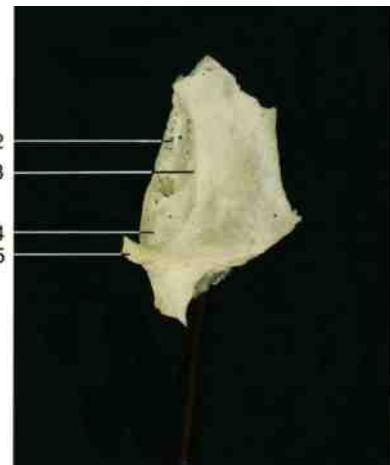

Anterior part of a disarticulated skull.

Orange = zygomatic bone; yellow = ethmoidal bone;
dark green = sphenoidal bone. The arrows indicate the locations
of the lacrimal bone (11) and the nasal bone (17).

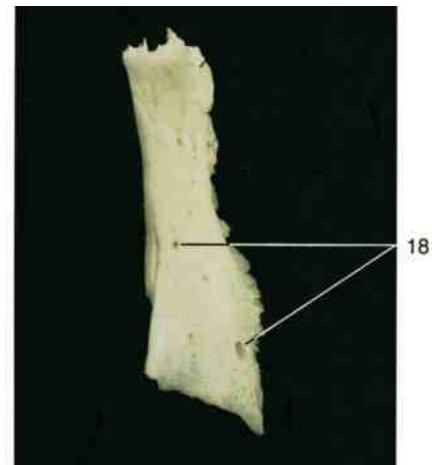

Left orbit (anterior aspect).

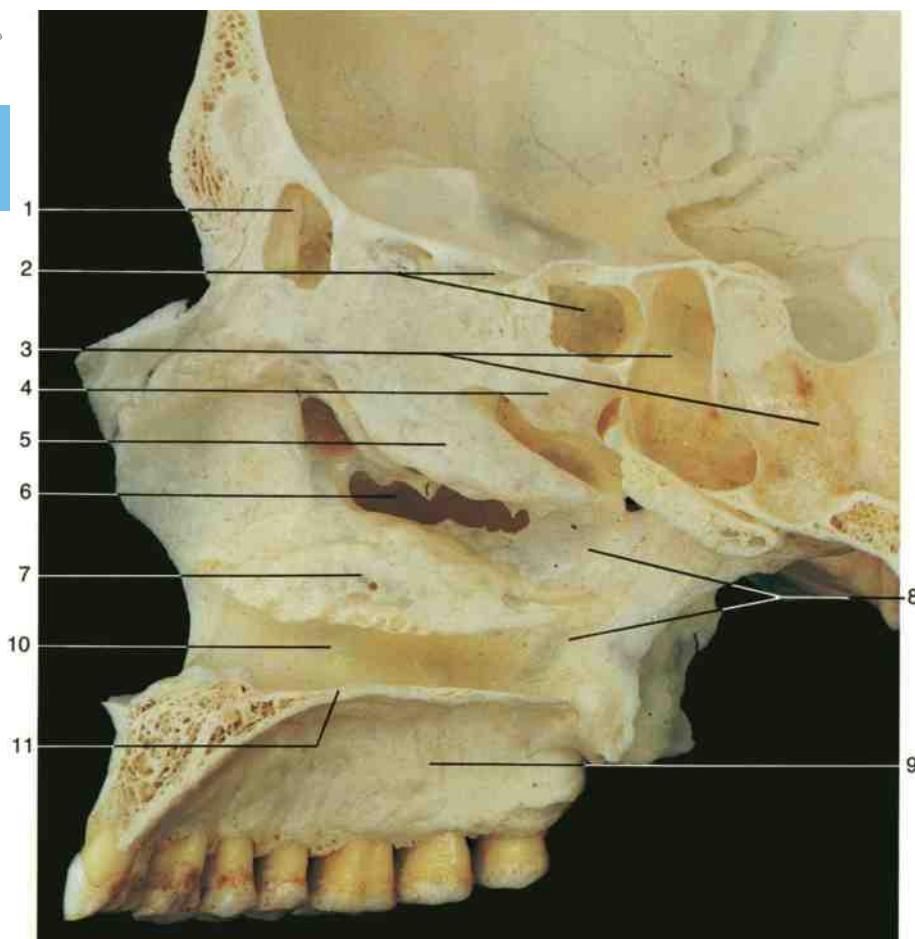

- 1 Occipital bone
- 2 Temporal bone
- 3 Frontal bone
- 4 Nasal spine of frontal bone
- 5 Zygomatic bone
- 6 Maxilla
- 7 Frontal process of maxilla

- 21 Superior longitudinal muscle of tongue
- 22 Transverse muscle of tongue
- 23 Buccinator muscle
- 24 Inferior longitudinal muscle of tongue
- 25 Sublingual gland
- 26 Genioglossus muscle

Coronal section through the oral cavity.

Deciduous teeth in child's skull. The developing crowns of the permanent teeth are displayed in their crypts in the maxilla and mandible.

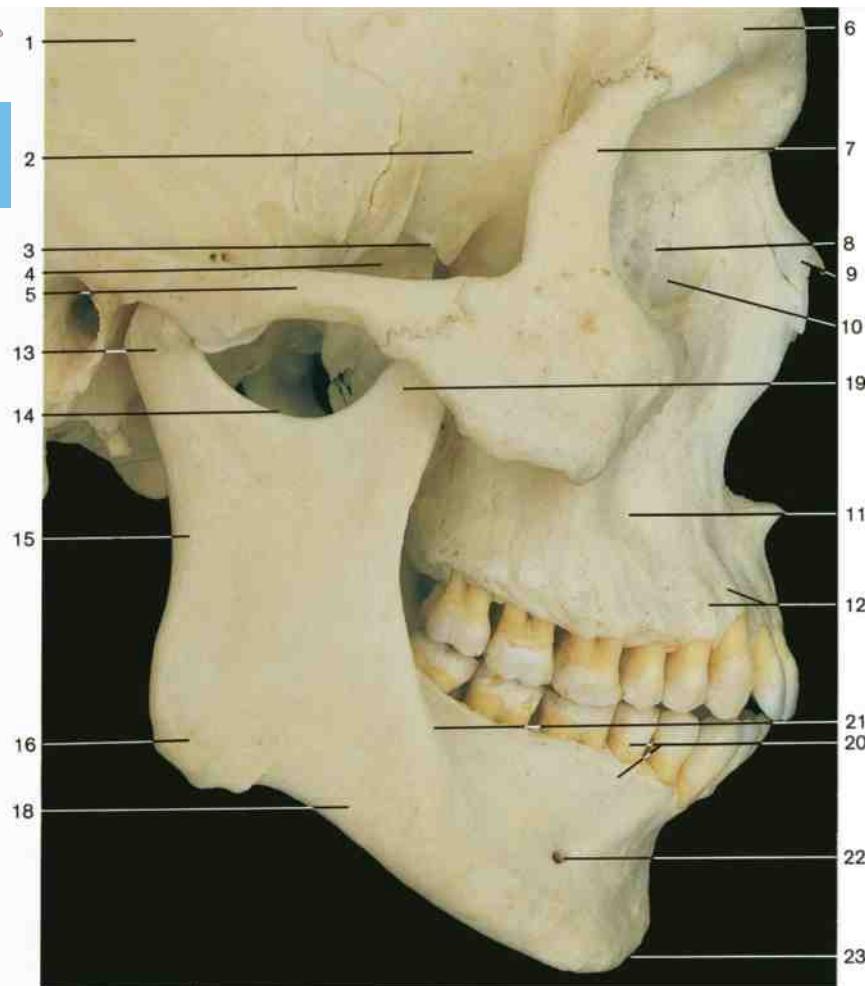

- 1 Permanent incisors
- 2 Permanent cupid (canine)
- 3 Premolars
- 4 First permanent molar
- 5 Second permanent molar
- 6 Mental foramen

Comparison of the deciduous and permanent teeth.

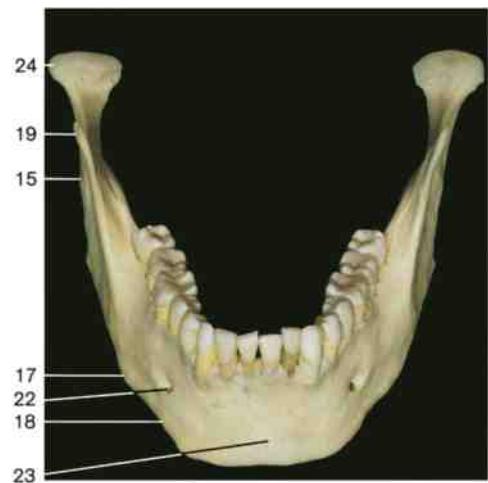

Notice that the breadth of the alveolar arch of the child's mandible and maxilla holding the deciduous teeth is nearly the same as the comparable portion in the jaws of the adult. Note the emergence of the third molars. The numbers of the teeth correspond to the numbers in the figure below.

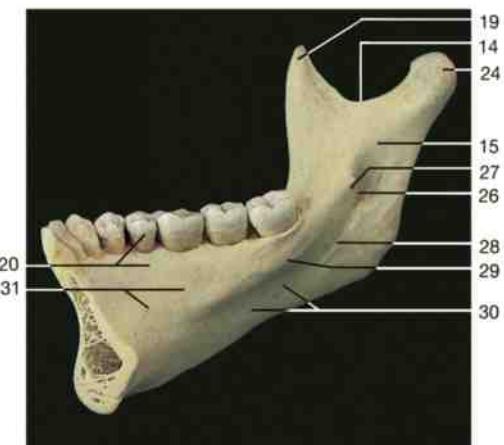

Isolated teeth of the alveolar part of the maxilla (top row) and the mandible (lower row), labial surface of the teeth.

Lateral aspect of the facial bones. Mandible and teeth in the position of occlusion. Upper and lower jaw occluded.

Mandible of the adult (anterior aspect).

Right half of mandible (medial aspect).

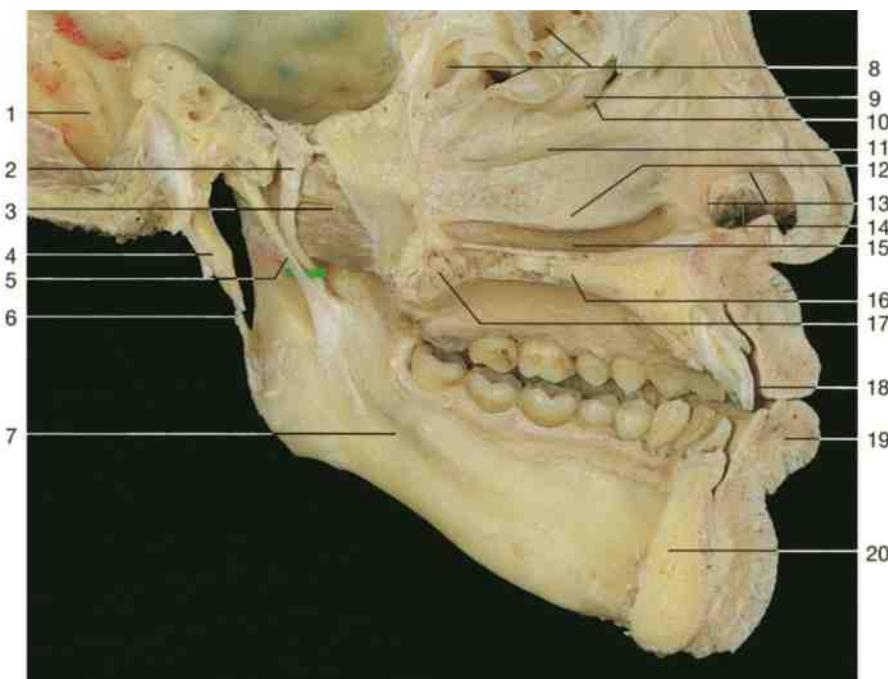

Mandible of the adult (superior aspect).

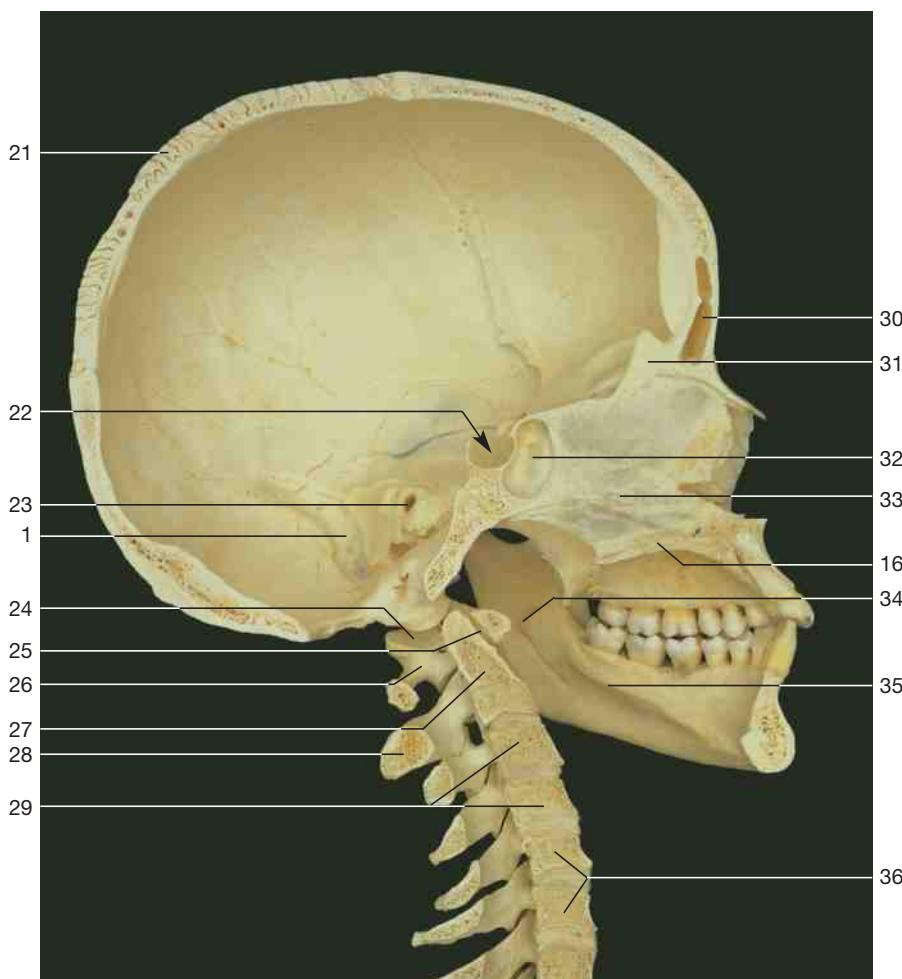

- Temporal bone**

Main branches of maxillary artery (schematic drawing).

1 Superficial temporal artery

Branches of the first part

- 2 Deep auricular artery and anterior tympanic artery
- 3 Middle meningeal artery
- 4 Inferior alveolar artery

Branches of the second part

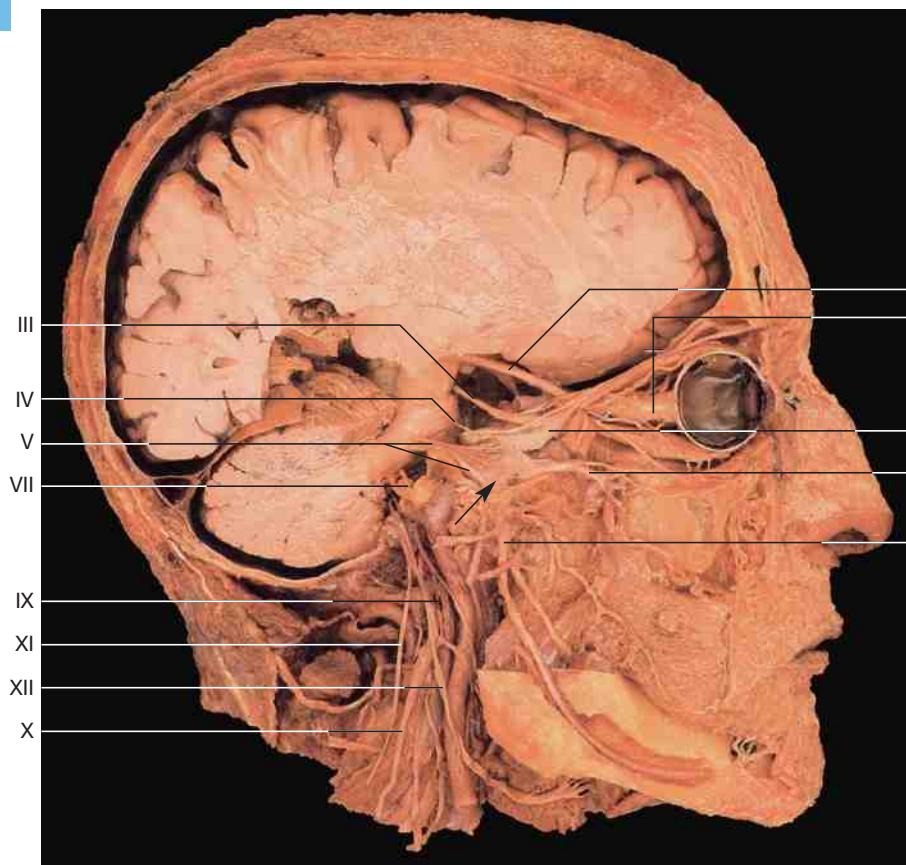

- 5 Deep temporal branches
- 6 Pterygoid branches
- 7 Masseteric artery
- 8 Buccal artery

Branches of the third part

- 9 Posterior superior alveolar artery
- 10 Infra-orbital artery
- 11 Sphenopalatine artery and branches to the nasal cavity
- 12 Descending palatine artery
- 13 Artery of the pterygoid canal

2.2 Cranial Nerves

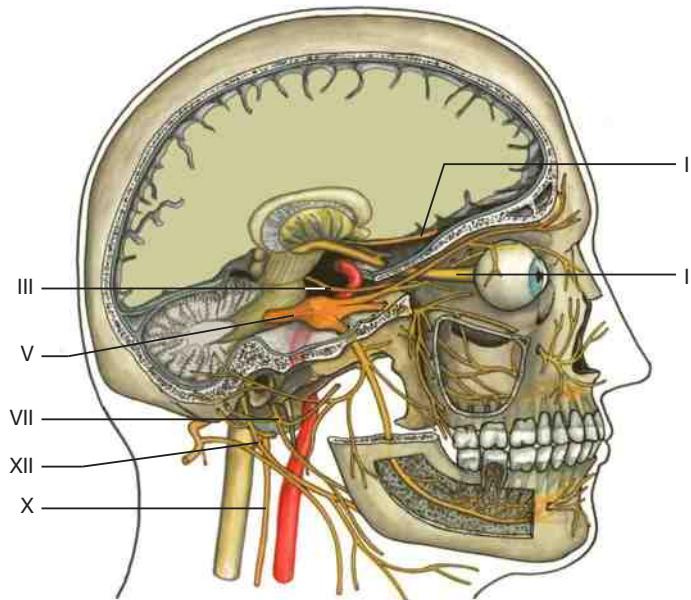

Dissection of the cranial nerves (indicated by I–XII) (lateral aspect). Brain, brain stem, and cerebellum have been partly removed (from Lütjen-Drecoll, Rohen, Innenansichten des menschlichen Körpers, 2010).

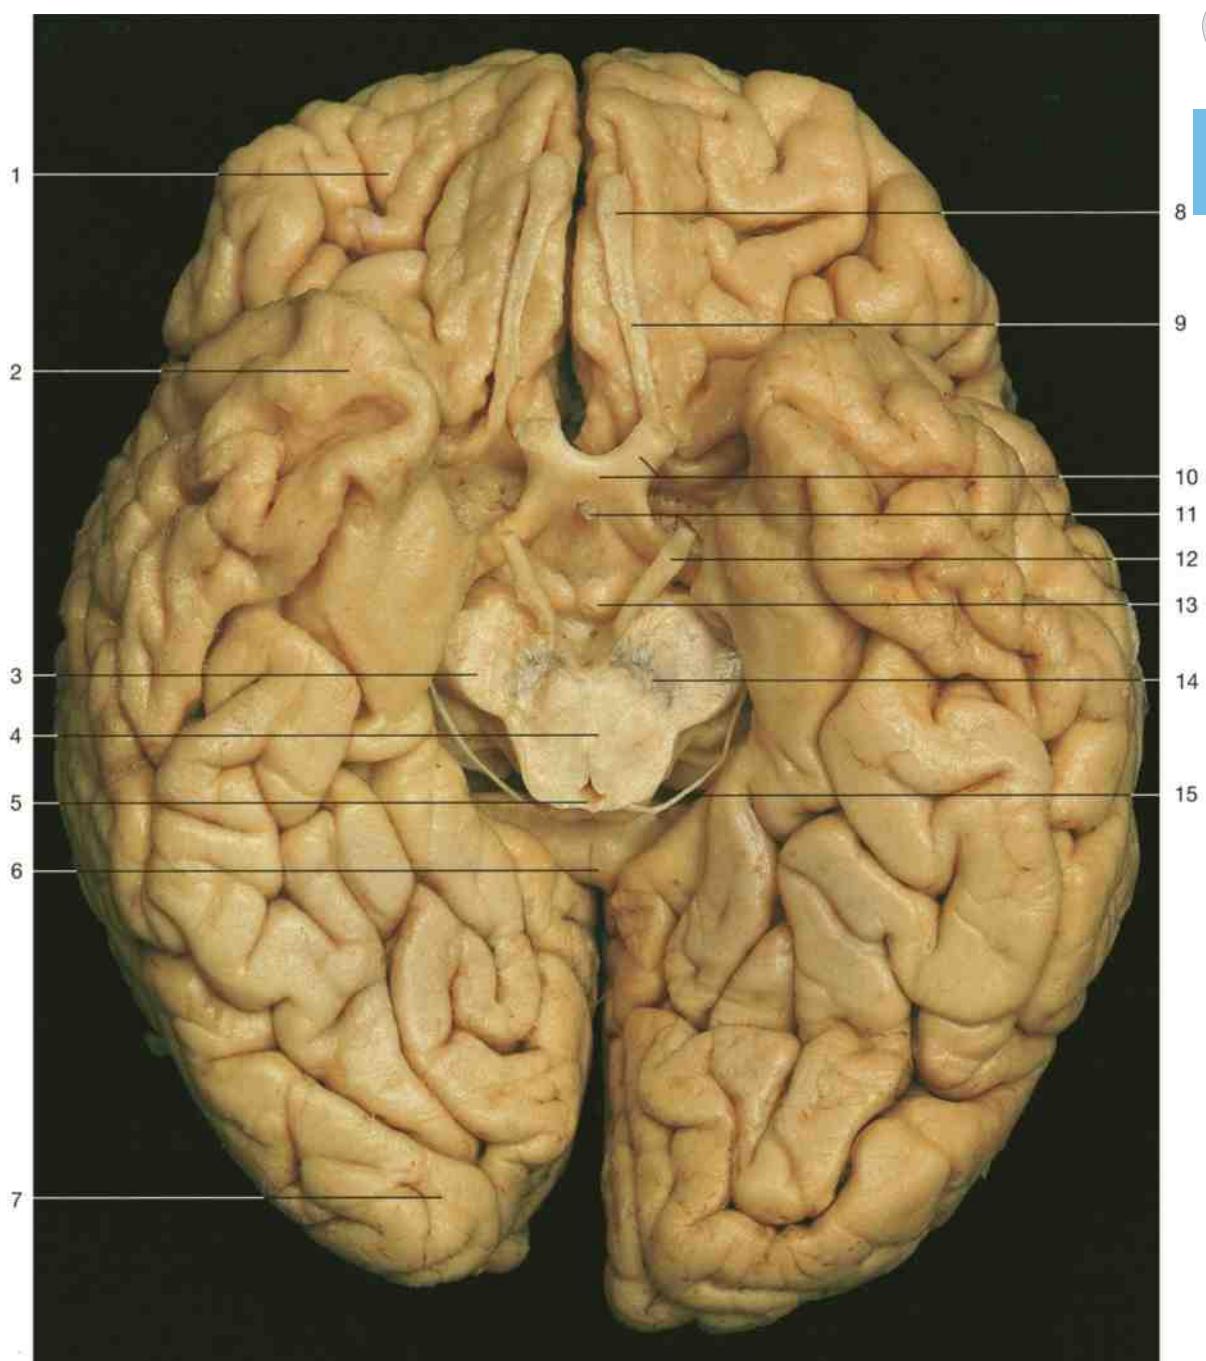

The twelve cranial nerves emerge from the brain stem and penetrate the skull at different places. The olfactory nerves (n. I) pass the lamina cribrosa innervating the upper part of the nasal mucous membrane. The optic nerve (n. II) is related to the eye. The external ocular muscles are innervated by the oculomotor, trochlear, and abducent nerves (n. III, n. IV, and n. VI). Facial skin and masticatory muscles are innervated by the trigeminal nerve (n. V) while the facial nerve (n. VII) innervates mainly the mimic musculature. The stato-acoustic organ is related to the vestibulocochlear nerve (n. VIII). The vagus nerve (n. X) is one of the longest cranial nerves, running through the lateral neck region to reach the thoracic and abdominal cavities. It belongs to the parasympathetic part of the autonomic nervous system. The glossopharyngeal (n. IX), accessory (n. XI), and hypoglossal (n. XII) nerves innervate the muscles of the neck, the tongue, and the pharynx. During human evolution, they were incorporated secondarily into the brain cavity.

Cranial nerves

- I = Olfactory nerves
- II = Optic nerve
- III = Oculomotor nerve
- IV = Trochlear nerve
- V = Trigeminal nerve
- VI = Abducent nerve
- VII = Facial nerve
- VIII = Vestibulocochlear nerve
- IX = Glossopharyngeal nerve
- X = Vagus nerve
- XI = Accessory nerve
- XII = Hypoglossal nerve

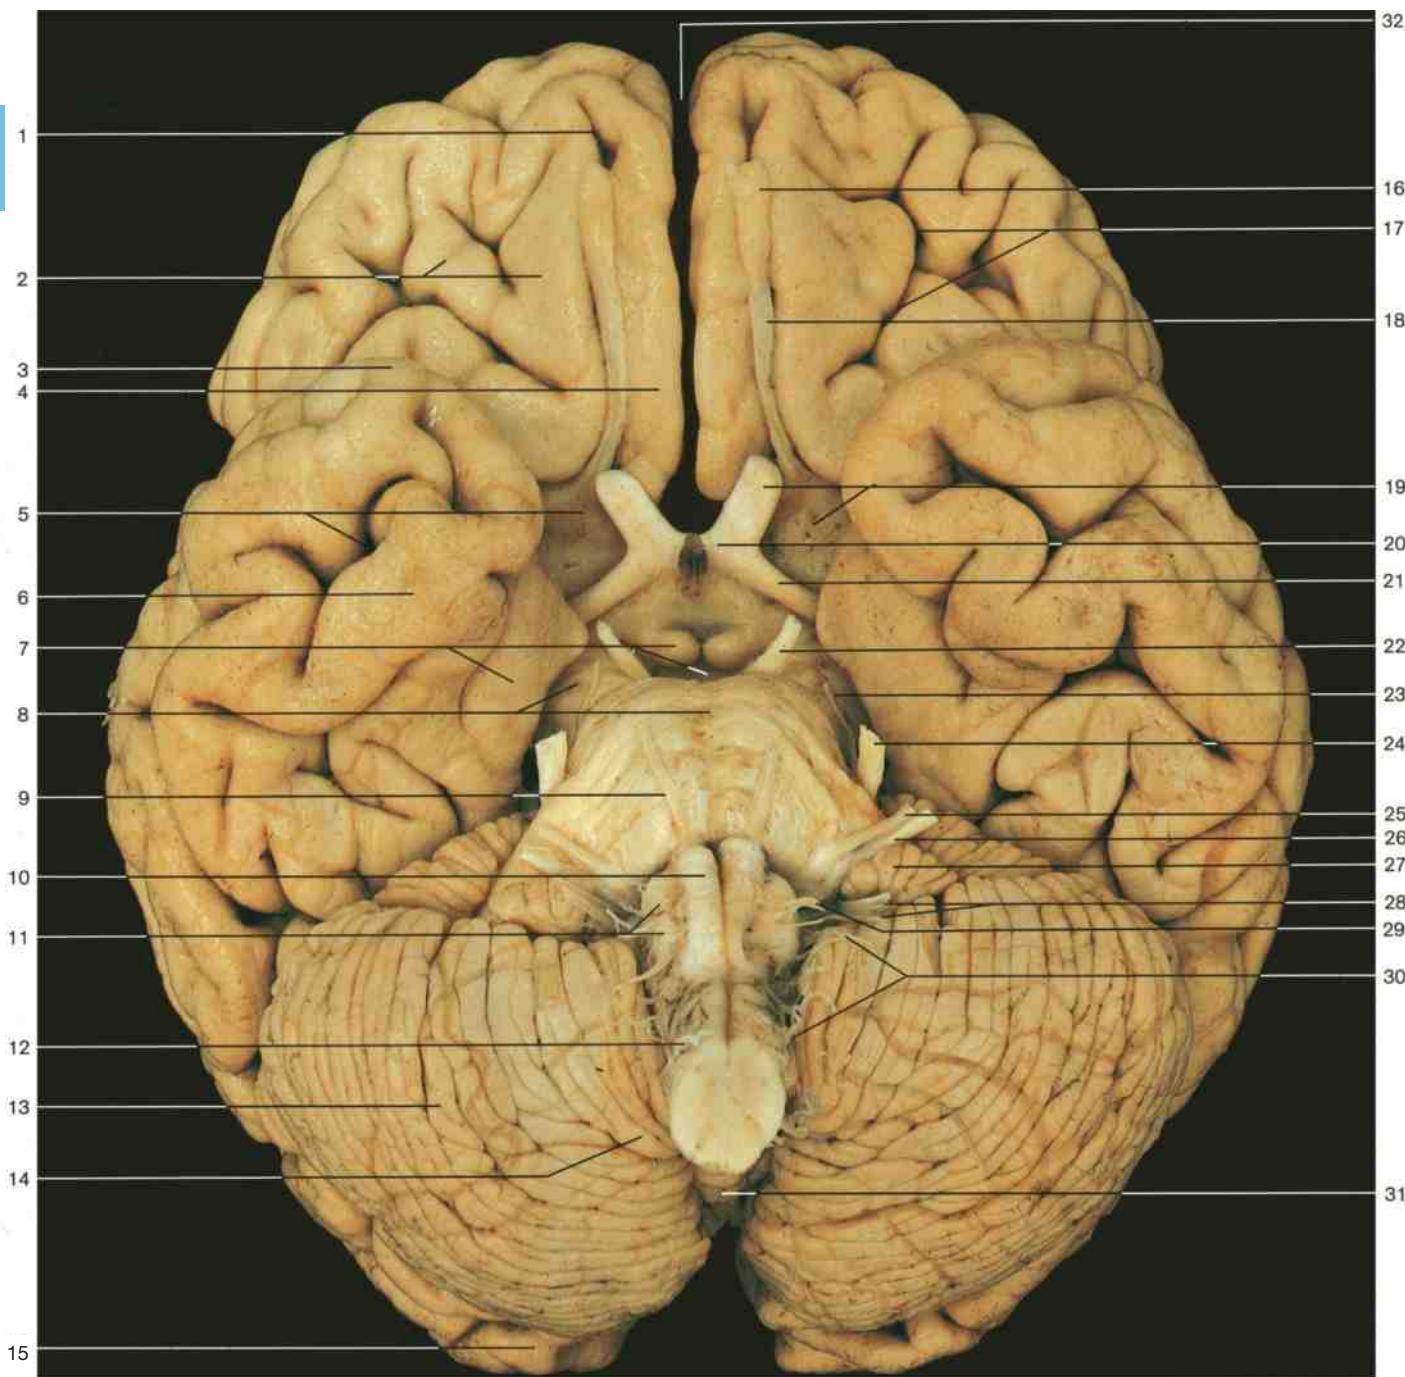

Schematic drawing of the cranial nerves (indicated by I–XII) (lateral aspect).

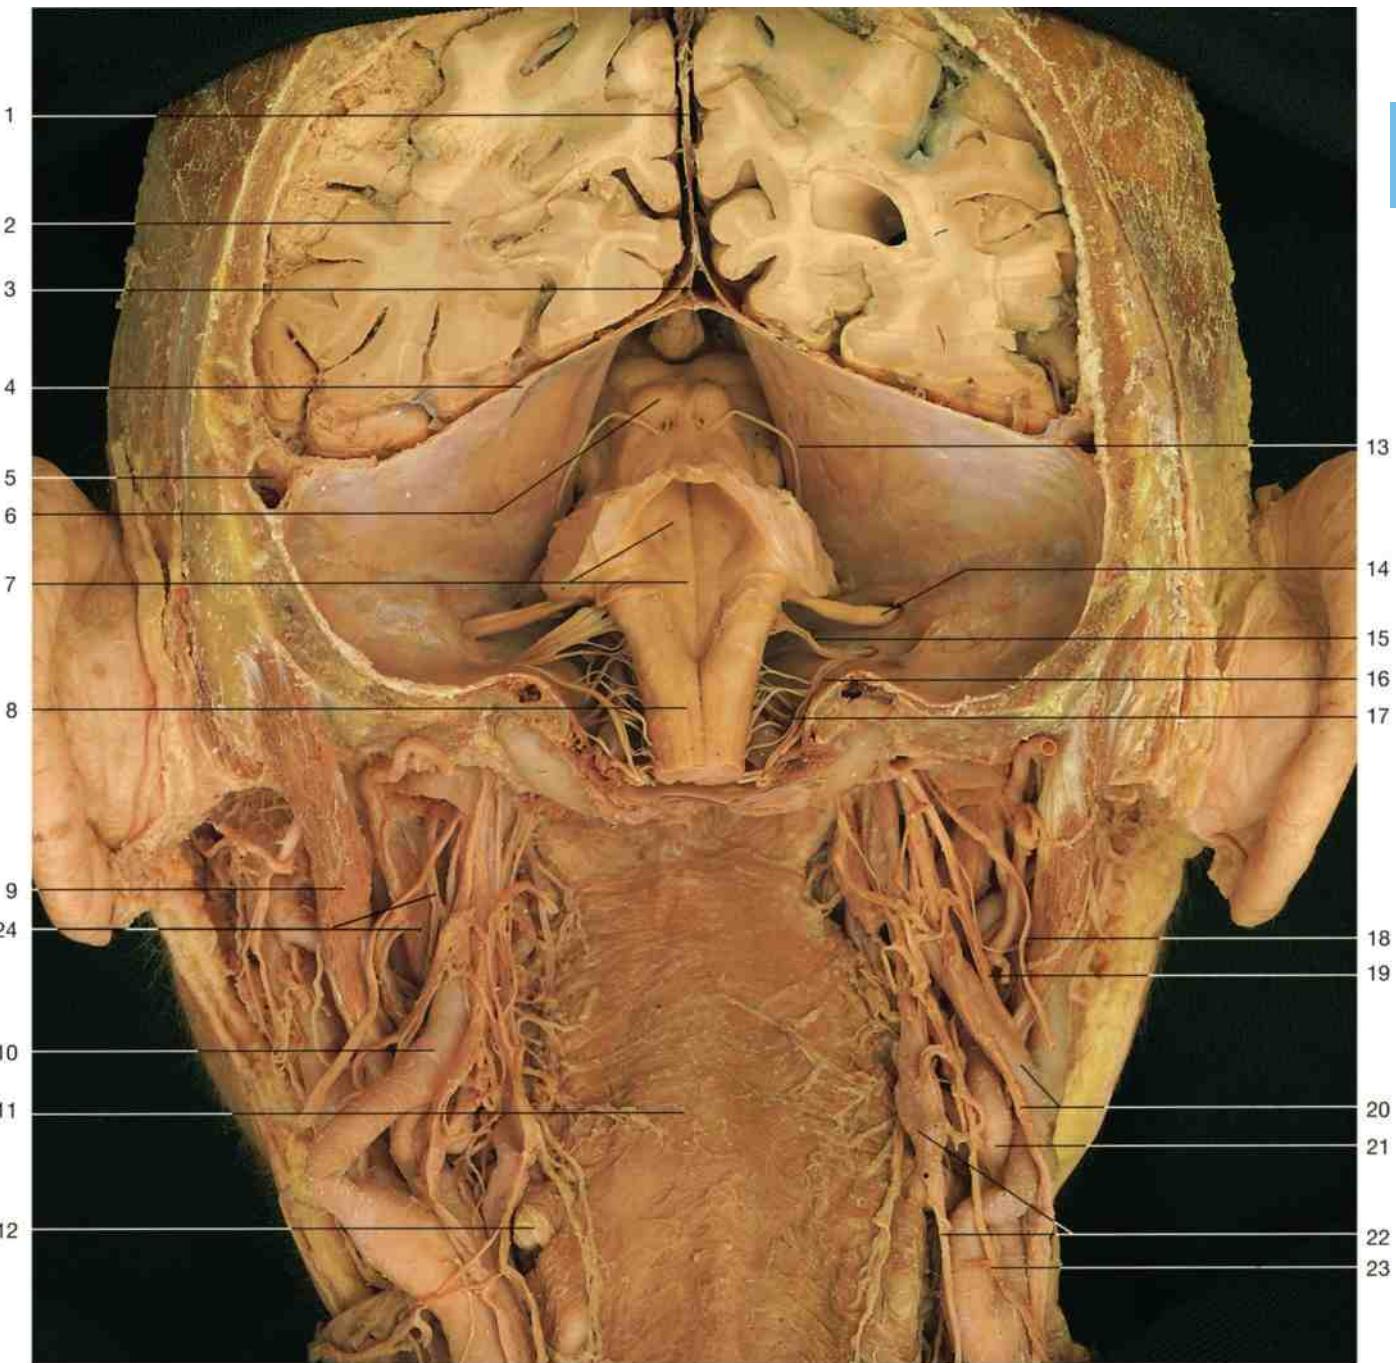

Inferior aspect of the brain with cranial nerves. Midbrain divided.

- | | |
|-------------------------------|----------------------------------|
| 1 Frontal lobe | 9 Olfactory tract |
| 2 Temporal lobe | 10 Optic nerve and optic chiasma |
| 3 Pedunculus cerebri | 11 Infundibulum |
| 4 Midbrain (divided) | 12 Oculomotor nerve (n. III) |
| 5 Cerebral aqueduct | 13 Mamillary body |
| 6 Splenium of corpus callosum | 14 Substantia nigra |
| 7 Occipital lobe | 15 Trochlear nerve (n. IV) |
| 8 Olfactory bulb | |

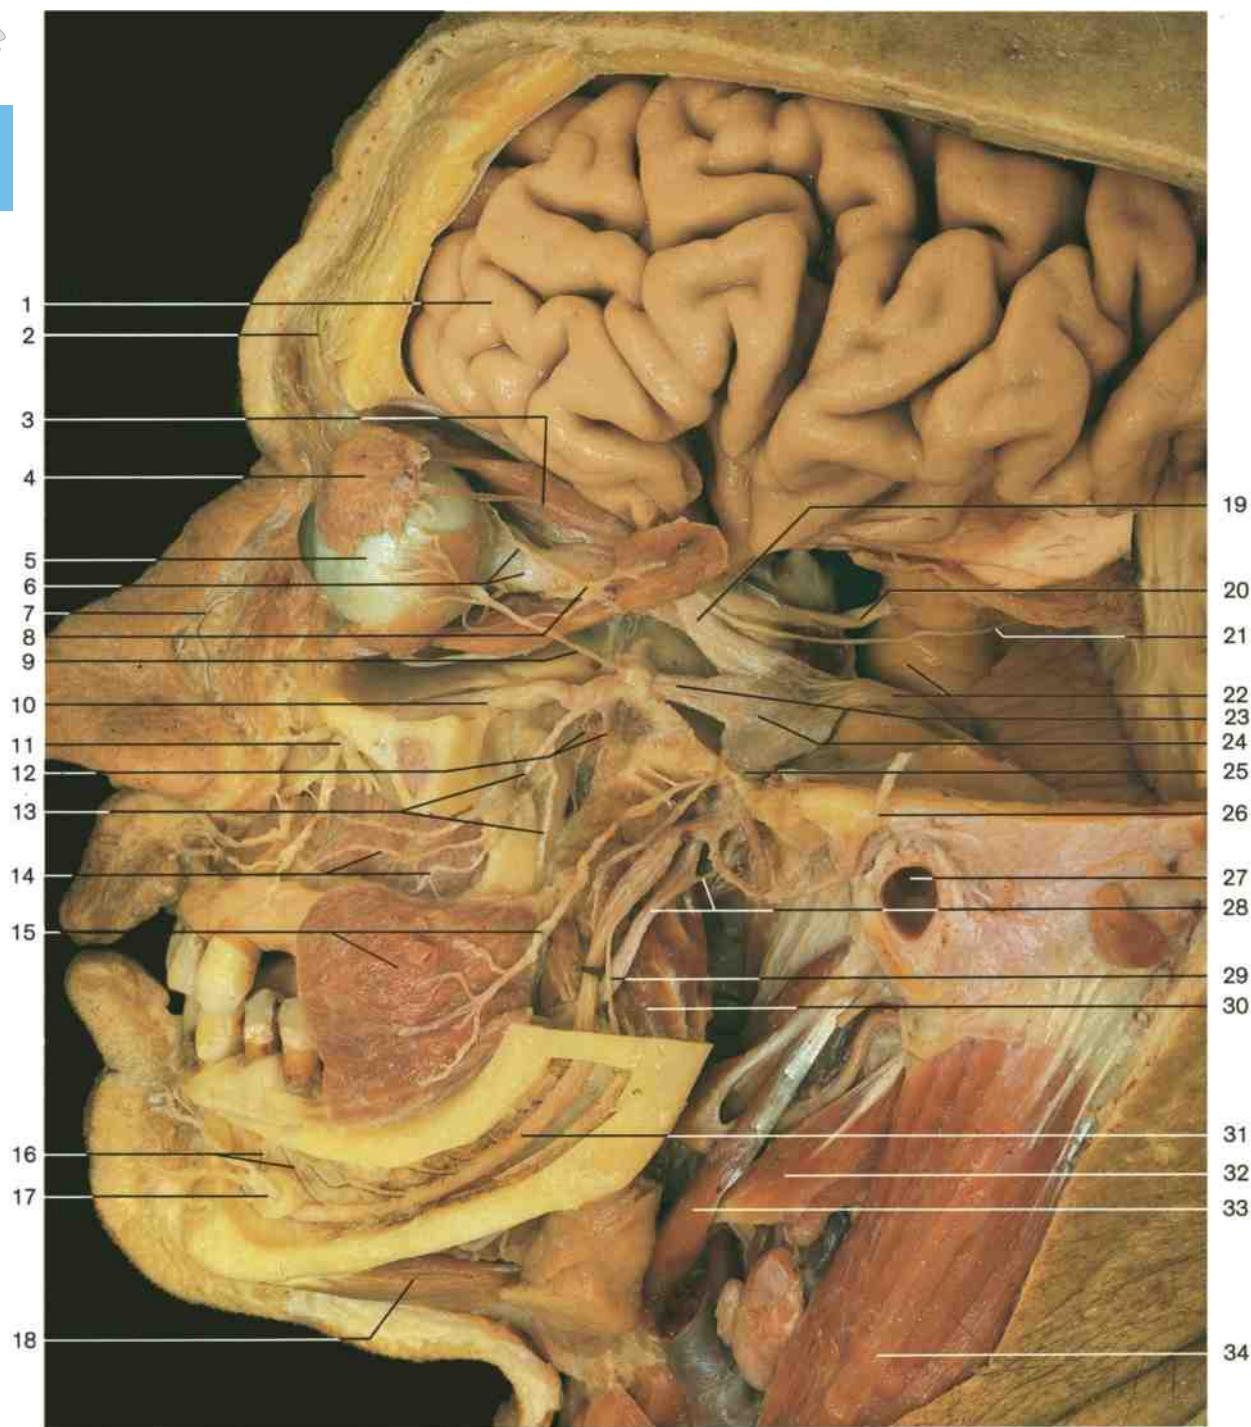

Cranial nerves. Brain (inferior aspect).

- | | | |
|--|--|--|
| 1 Olfactory sulcus (termination) | 13 Cerebellum | 25 Facial nerve (n. VII) |
| 2 Orbital gyri | 14 Tonsil of cerebellum | 26 Vestibulocochlear nerve (n. VIII) |
| 3 Temporal lobe | 15 Occipital lobe (posterior pole) | 27 Flocculus of cerebellum |
| 4 Straight gyrus | 16 Olfactory bulb | 28 Glossopharyngeal nerve (n. IX) and vagus nerve (n. X) |
| 5 Olfactory trigone and inferior temporal sulcus | 17 Orbital sulci of frontal lobe | 29 Hypoglossal nerve (n. XII) |
| 6 Medial occipitotemporal gyrus | 18 Olfactory tract | 30 Accessory nerve (n. XI) |
| 7 Parahippocampal gyrus, mamillary body, and interpeduncular fossa | 19 Optic nerve (n. II) and anterior perforated substance | 31 Vermis of cerebellum |

| 8 Ciliary ganglion | 19 Ophthalmic nerve (n. V ₁) | 30 Medial pterygoid muscle |
| 9 Zygomatic nerve | 20 Oculomotor nerve (n. III) | 31 Inferior alveolar nerve |
| 10 Infra-orbital nerve | 21 Trochlear nerve (n. IV) | 32 Posterior belly of digastric muscle |
| 11 Infra-orbital foramen and terminal branches of infra-orbital nerve | 22 Trigeminal nerve and pons | 33 Stylohyoid muscle |
| | | 34 Sternocleidomastoid muscle |

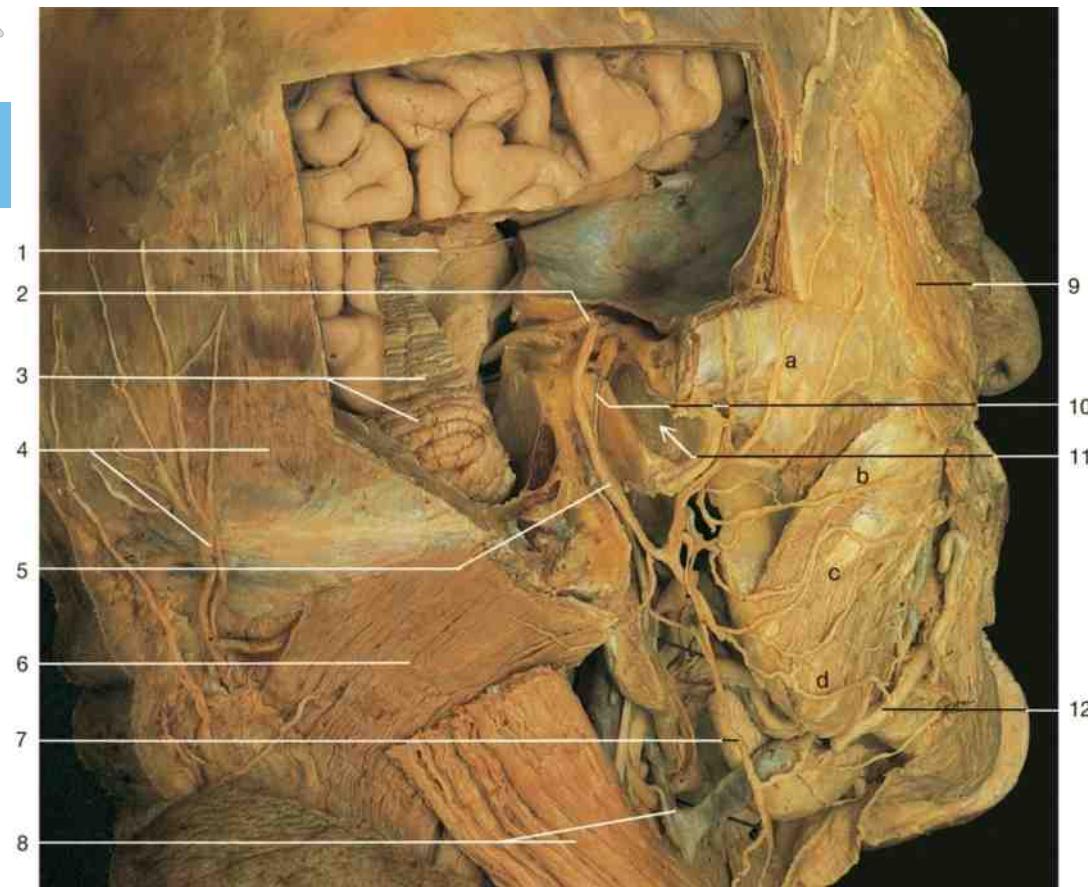

Cranial nerves in connection with the brain stem. Left side (lateral superior aspect). Left half of brain and head partly removed. Notice the location of trigeminal ganglion.

Main branches of trigeminal nerve (schematic drawing of figure on opposite page).

1. Frontal nerve
2. Lacrimal gland and eyeball
3. Lacrimal nerve
4. Lateral rectus muscle
5. Ciliary ganglion lateral to optic nerve
6. Zygomatic nerve
7. Inferior branch of oculomotor nerve
8. Ophthalmic nerve (n. V₁)
9. Maxillary nerve (n. V₂)
10. Trigeminal ganglion
11. Mandibular nerve (n. V₃)
12. Posterior superior alveolar nerves
13. Tympanic cavity, external acoustic meatus, and tympanic membrane
14. Inferior alveolar nerve
15. Lingual nerve
16. Facial nerve (n. VII)
17. Vagus nerve (n. X)
18. Hypoglossal nerve (n. XII) and superior root of ansa cervicalis
19. External carotid artery
20. Olfactory tract (n. I)
21. Optic nerve (n. II) (intracranial part)
22. Oculomotor nerve (n. III)
23. Abducent nerve (n. VI)
24. Trochlear nerve (n. IV)
25. Trigeminal nerve (n. V)
26. Vestibulocochlear nerve (n. VIII) and facial nerve (n. VII)
27. Glossopharyngeal nerve (n. IX) (leaving brain stem)
28. Rhomboid fossa
29. Vagus nerve (n. X) (leaving brain stem)
30. Hypoglossal nerve (n. XII) (leaving medulla oblongata)
31. Accessory nerve (n. XI) (ascending from foramen magnum)
32. Vertebral artery
33. Spinal ganglion and dura mater of spinal cord
34. Accessory nerve (n. XI)
35. Internal carotid artery
36. Lateral and medial branch of supra-orbital nerve
37. InfratrocLEAR nerve
38. Infra-orbital nerve
39. Pterygopalatine ganglion and middle superior alveolar nerve
40. Middle superior alveolar nerves (entering superior dental plexus)
41. Buccal nerve
42. Mental nerve and mental foramen
43. Auriculotemporal nerve
44. Otic ganglion (dotted line)
45. Chorda tympani
46. Mylohyoid nerve
47. Submandibular gland
48. Hyoid bone

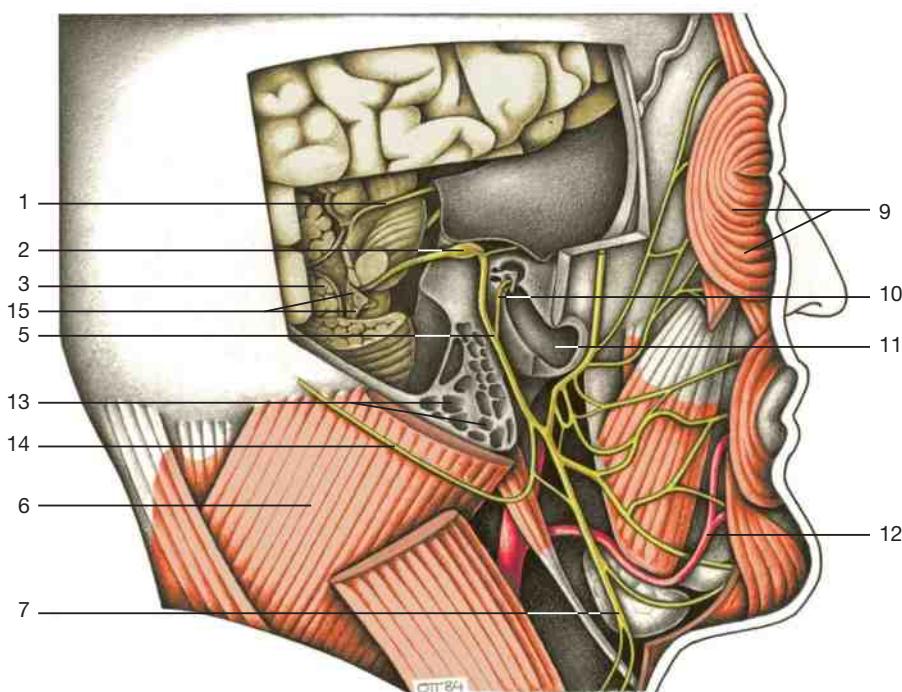

Dissection of facial nerve in its entirety. Cranial cavity fenestrated; temporal lobe partly removed.

Facial canal and tympanic cavity opened, posterior wall of external acoustic meatus removed.

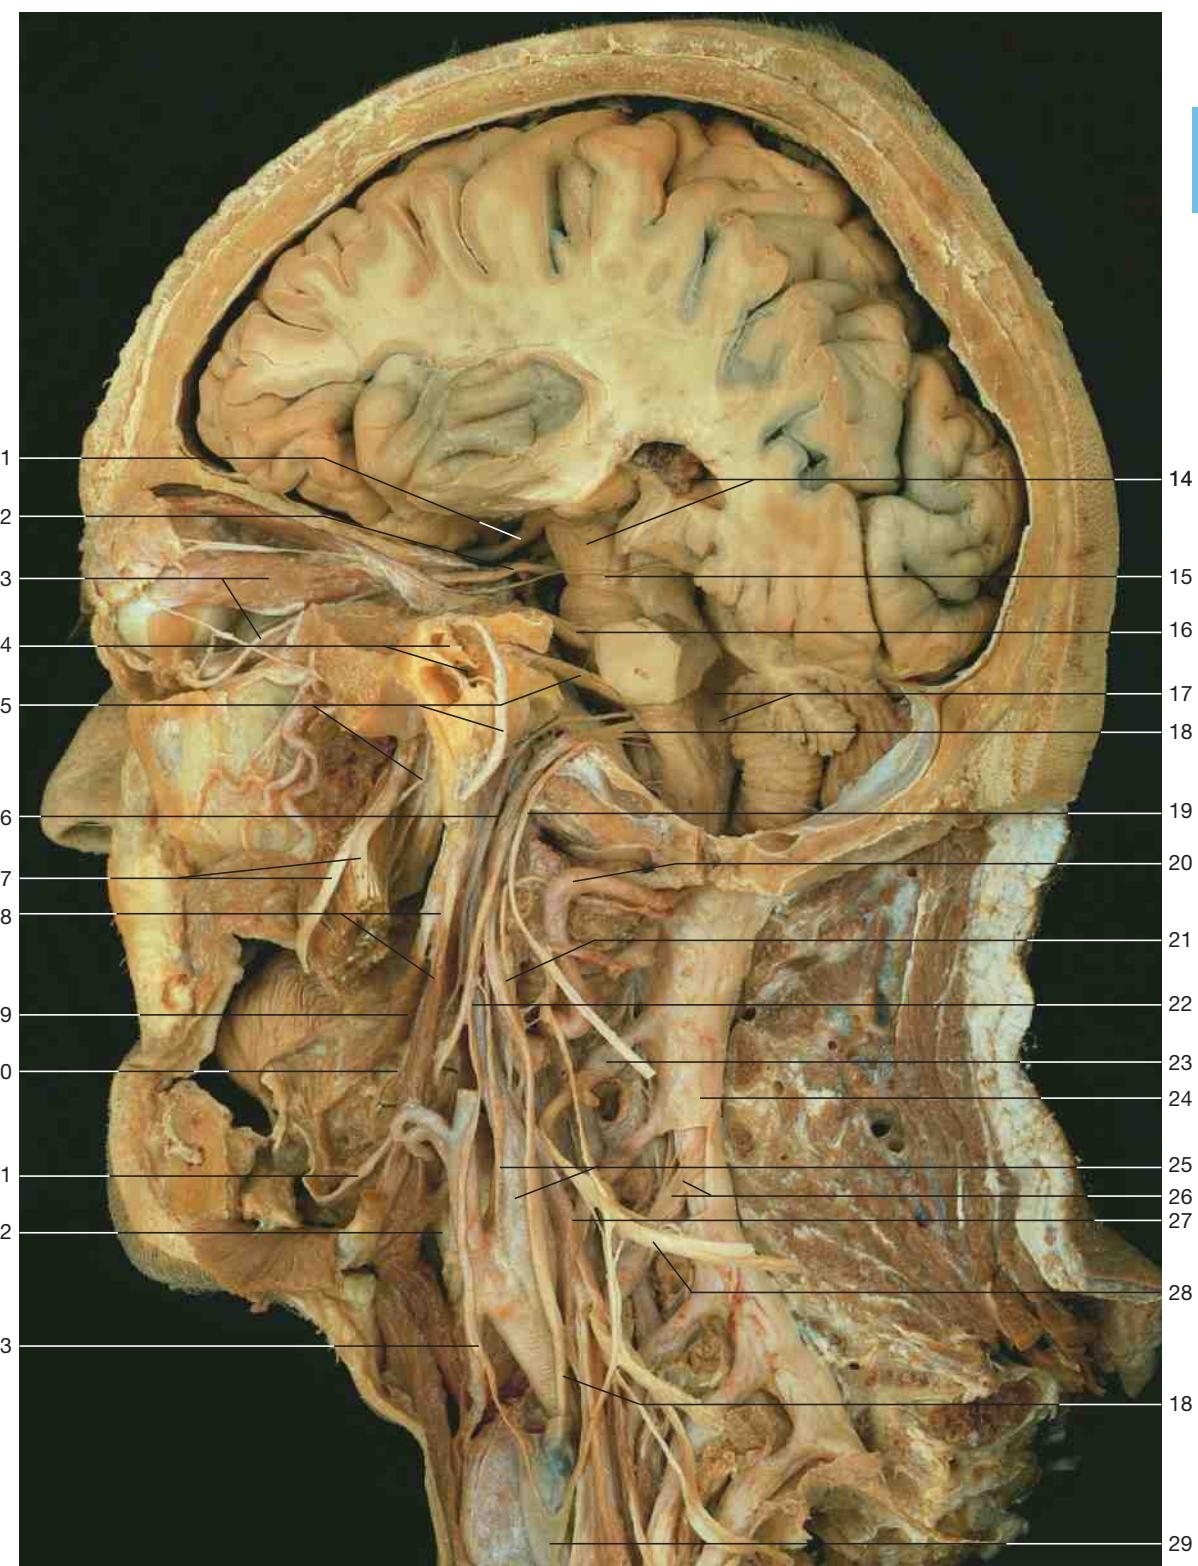

Branches of facial nerve: a = temporal branch; b = zygomatic branches; c = buccal branches; d = marginal mandibular branch.

Facial nerve (schematic drawing of the dissection above).

- 1 Trochlear nerve
- 2 Facial nerve with geniculate ganglion
- 3 Cerebellum (right hemisphere)
- 4 Occipital belly of occipitofrontalis muscle and greater occipital nerve
- 5 Facial nerve at stylomastoid foramen
- 6 Splenius capitis muscle
- 7 Cervical branch of facial nerve
- 8 Sternocleidomastoid muscle and retromandibular vein
- 9 Orbicularis oculi muscle
- 10 Chorda tympani
- 11 External acoustic meatus
- 12 Facial artery
- 13 Mastoid air cells
- 14 Posterior auricular nerve
- 15 Nucleus and genu of facial nerve

Cranial nerves in connection with the brain stem (oblique-lateral aspect). Lateral portion of the skull, brain, neck and facial structures, lateral wall of orbit and oral cavity have been removed. The tympanic cavity has been opened. The mandible has been divided and the muscles of mastication have been removed.

- | | | |
|--|---|---|
| 1 Optic tract | 11 Lingual branch of hypoglossal nerve | 22 Hypoglossal nerve (n. XII) |
| 2 Oculomotor nerve (n. III) | 12 External carotid artery | 23 Spinal ganglion with dural sheath |
| 3 Lateral rectus muscle and inferior branch of oculomotor nerve | 13 Superior root of ansa cervicalis (branch of hypoglossal nerve, derived from C ₁) | 24 Dura mater of spinal cord |
| 4 Malleus and chorda tympani | 14 Lateral ventricle with choroid plexus and cerebral peduncle | 25 Internal carotid artery and carotid sinus branch of glossopharyngeal nerve |
| 5 Chorda tympani, facial nerve (n. VII), and vestibulocochlear nerve (n. VIII) | 15 Trochlear nerve (n. IV) | 26 Dorsal roots of spinal nerve |
| 6 Glossopharyngeal nerve (n. XI) | 16 Trigeminal nerve (n. V) | 27 Sympathetic trunk |
| 7 Lingual nerve and inferior alveolar nerve | 17 Fourth ventricle and rhomboid fossa | 28 Branch of cervical plexus (ventral primary ramus of third cervical spinal nerve) |
| 8 Styloid process and stylohyoid muscle | 18 Vagus nerve (n. X) | 29 Ansa cervicalis |
| 9 Styloglossus muscle | 19 Accessory nerve (n. XI) | |
| 10 Lingual branches of glossopharyngeal nerve | 20 Vertebral artery | |
| | 21 Superior cervical ganglion | |

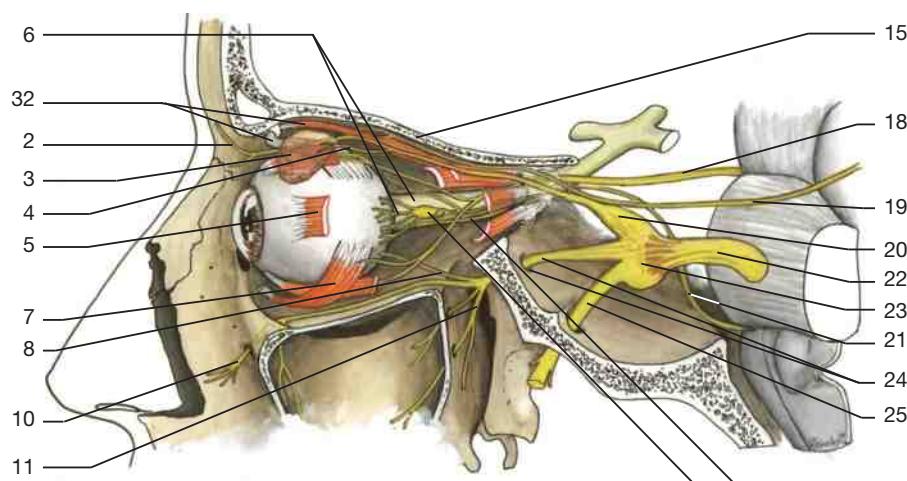

Cranial nerves of the orbit and pterygopalatine fossa. Left orbit (lateral aspect). Note the zygomaticolacrimal anastomosis (arrow).

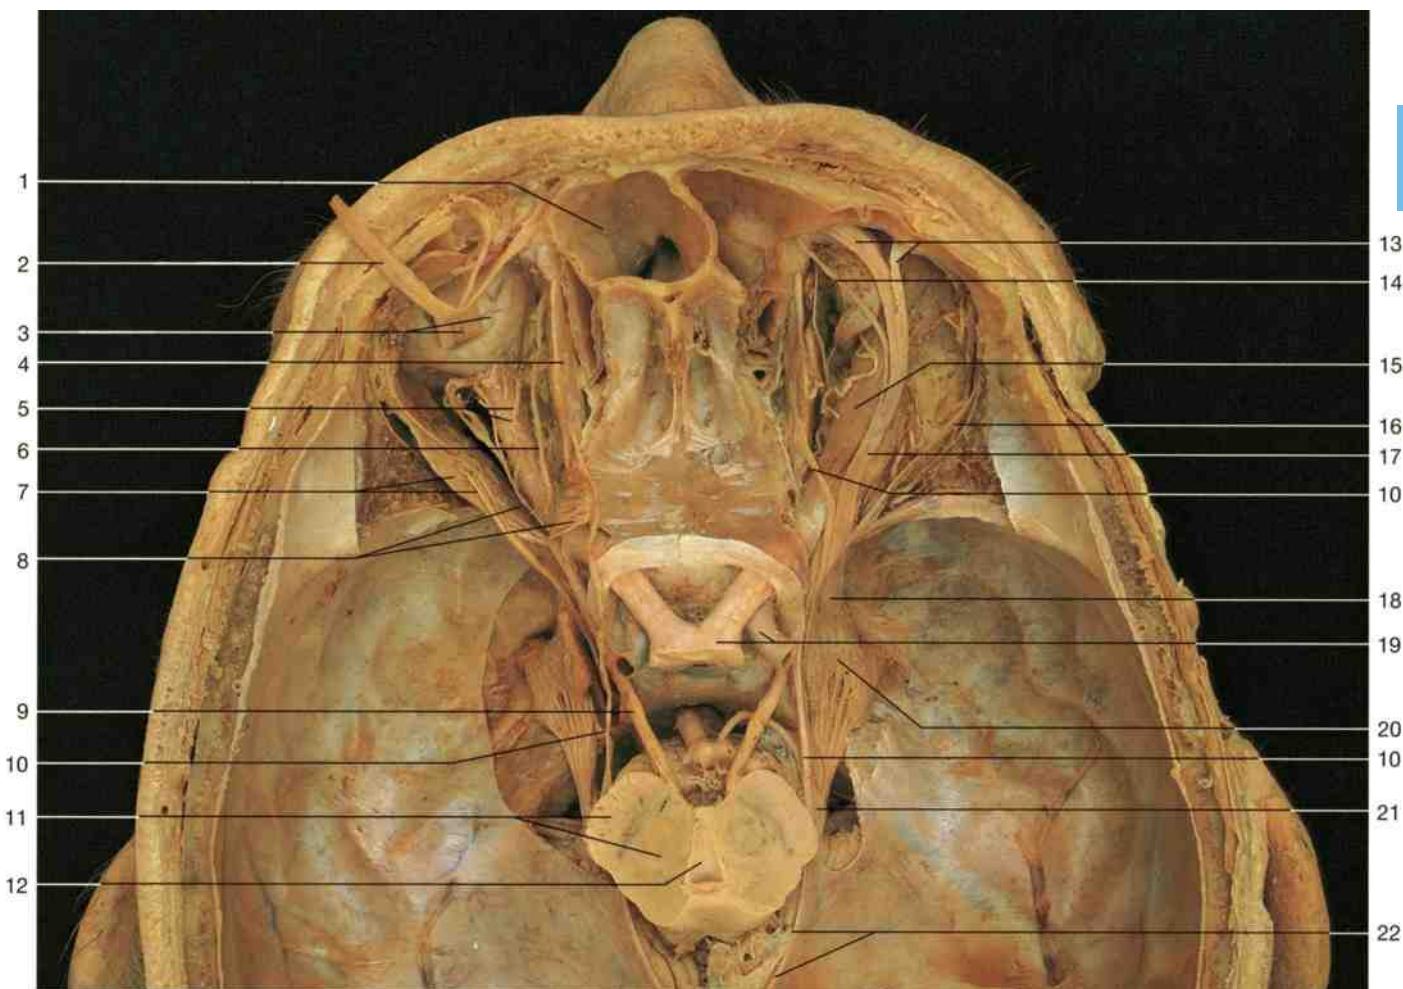

- 1 Frontal lobe
- 2 Supra-orbital nerve
- 3 Lacrimal gland
- 4 Lacrimal nerve
- 5 Lateral rectus muscle (divided)

- 6 Optic nerve and short ciliary nerves
- 7 Inferior oblique muscle
- 8 Zygomatic nerve
- 9 Inferior branch of oculomotor nerve and inferior rectus muscle

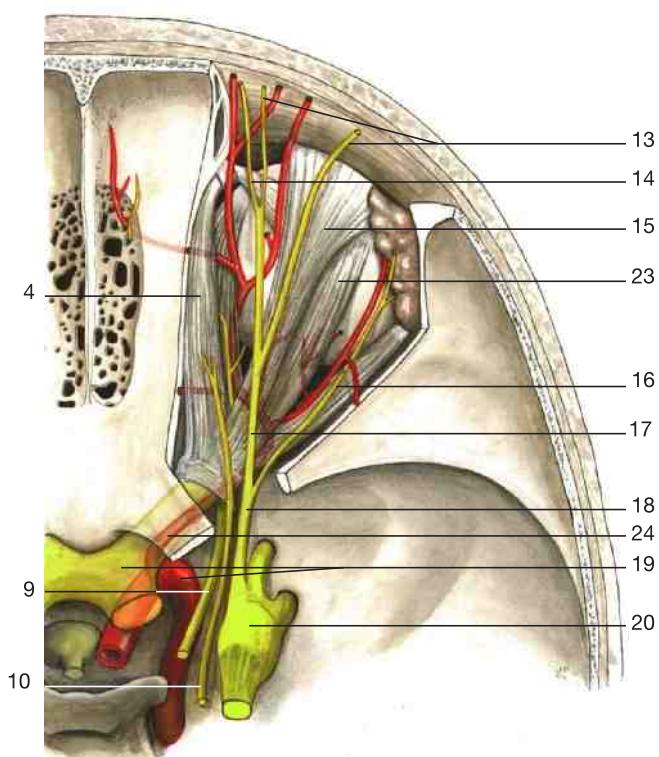

- 10 Infra-orbital nerve
- 11 Posterior superior alveolar nerves
- 12 Branches of superior alveolar plexus adjacent to mucous membrane of maxillary sinus
- 13 Central sulcus of insula
- 14 Superior rectus muscle
- 15 Periorbita (roof of orbit)
- 16 Nasociliary nerve
- 17 Ciliary ganglion
- 18 Oculomotor nerve (n. III)
- 19 Trochlear nerve (n. IV)
- 20 Ophthalmic nerve (n. V₁)
- 21 Abducent nerve (n. VI) (divided)
- 22 Trigeminal nerve (n. V)
- 23 Trigeminal ganglion
- 24 Maxillary nerve (n. V₂) and foramen rotundum
- 25 Mandibular nerve (n. V₃)
- 26 External acoustic meatus
- 27 Pterygopalatine nerves
- 28 Deep temporal nerves
- 29 Buccal nerve
- 30 Masseteric nerve
- 31 Auriculotemporal nerve
- 32 Trochlea and superior oblique muscle

Cranial nerves innervating extra-ocular muscles (lateral aspect).
(Schematic drawing.)

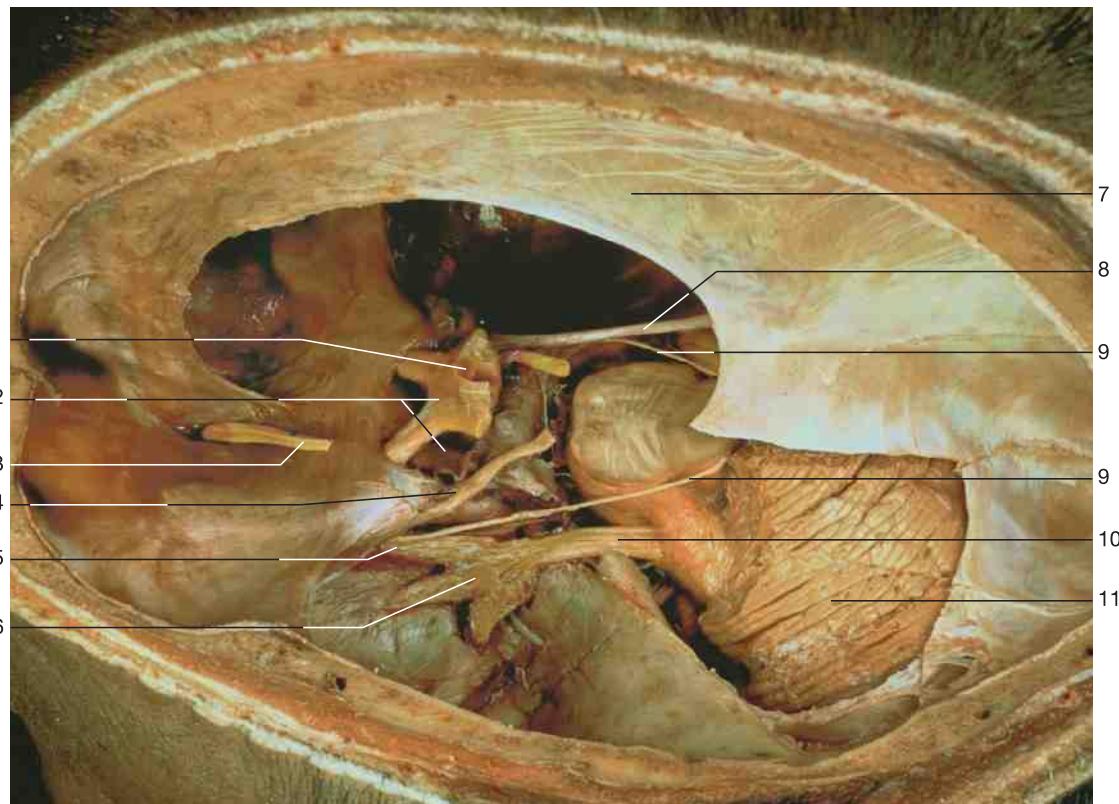

Cranial nerves of the orbit (superior aspect). Right side: superficial layer, left side: middle layer of the orbit (superior rectus muscle and frontal nerve divided and reflected). Tentorium and dura mater partly removed.

Cranial nerves within the orbit (superior aspect).

- 1 Frontal sinus (enlarged)
- 2 Frontal nerve (divided and reflected)
- 3 Superior rectus muscle (divided) and eyeball
- 4 Superior oblique muscle
- 5 Short ciliary nerves and optic nerve (n. II)
- 6 Nasociliary nerve
- 7 Abducent nerve (n. VI) and lateral rectus muscle
- 8 Ciliary ganglion and superior rectus muscle (reflected)
- 9 Oculomotor nerve (n. III)
- 10 Trochlear nerve (n. IV)
- 11 Crus cerebri and midbrain
- 12 Inferior wall of the third ventricle connected with cerebral aqueduct
- 13 Lateral and medial branches of supra-orbital nerve
- 14 Supratrochlear nerve
- 15 Superior levator palpebrae muscle
- 16 Lacrimal nerve
- 17 Frontal nerve
- 18 Ophthalmic nerve (n. V₁)
- 19 Optic chiasma and internal carotid artery
- 20 Trigeminal ganglion
- 21 Trigeminal nerve (n. V)
- 22 Tentorial notch
- 23 Superior rectus muscle
- 24 Ophthalmic artery

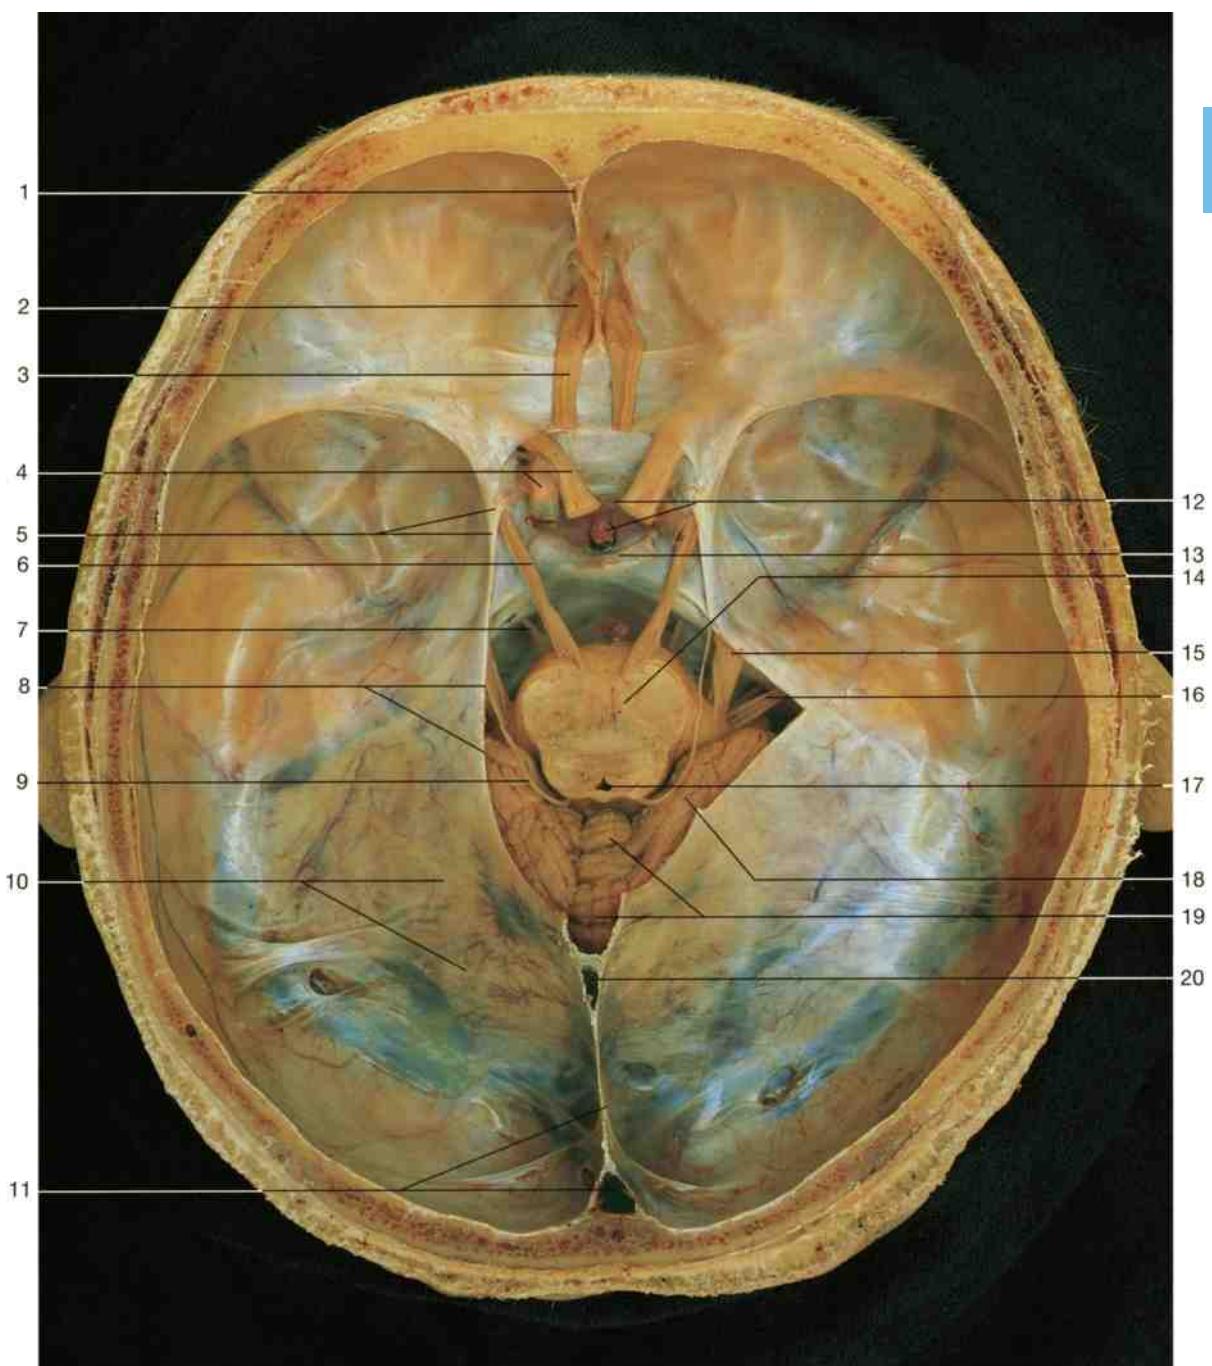

Cranial nerves at the base of the skull. The brain stem was divided and the tentorium fenestrated. Both hemispheres were removed.

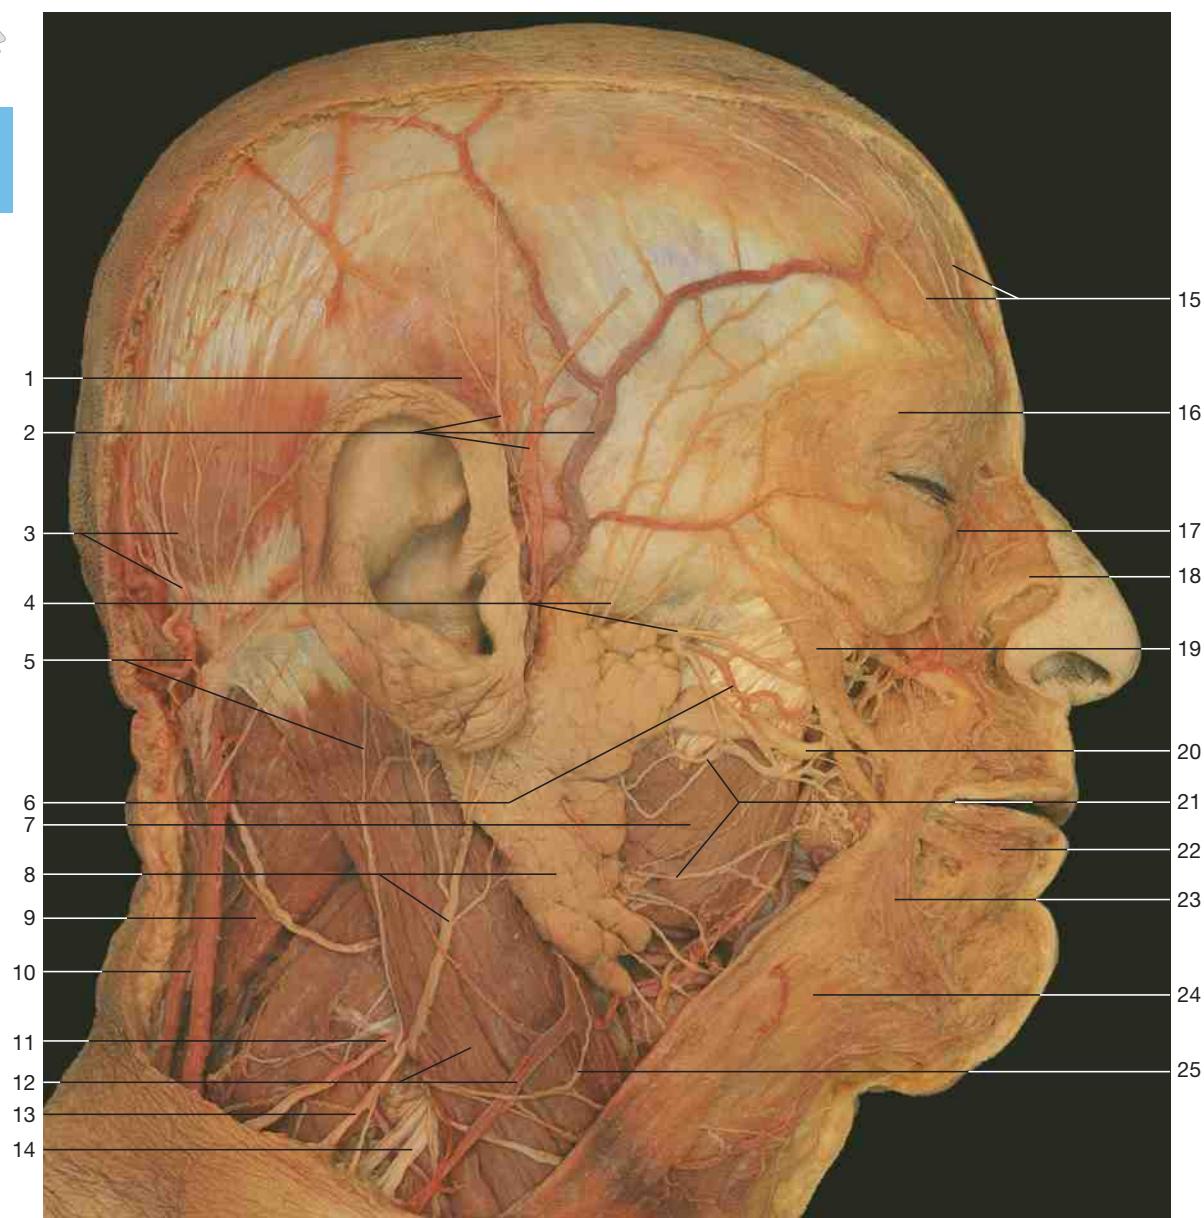

- 1 Infundibulum
- 2 Optic chiasma and internal carotid artery
- 3 Olfactory tract
- 4 Oculomotor nerve (n. III)
- 5 Ophthalmic nerve (n. V1)
- 6 Trigeminal ganglion

Lateral superficial aspect of the face. Peripheral distribution of facial nerve (n. VII).

Superficial region of the face. Note the facial plexus within the parotid gland (semischematic drawing).

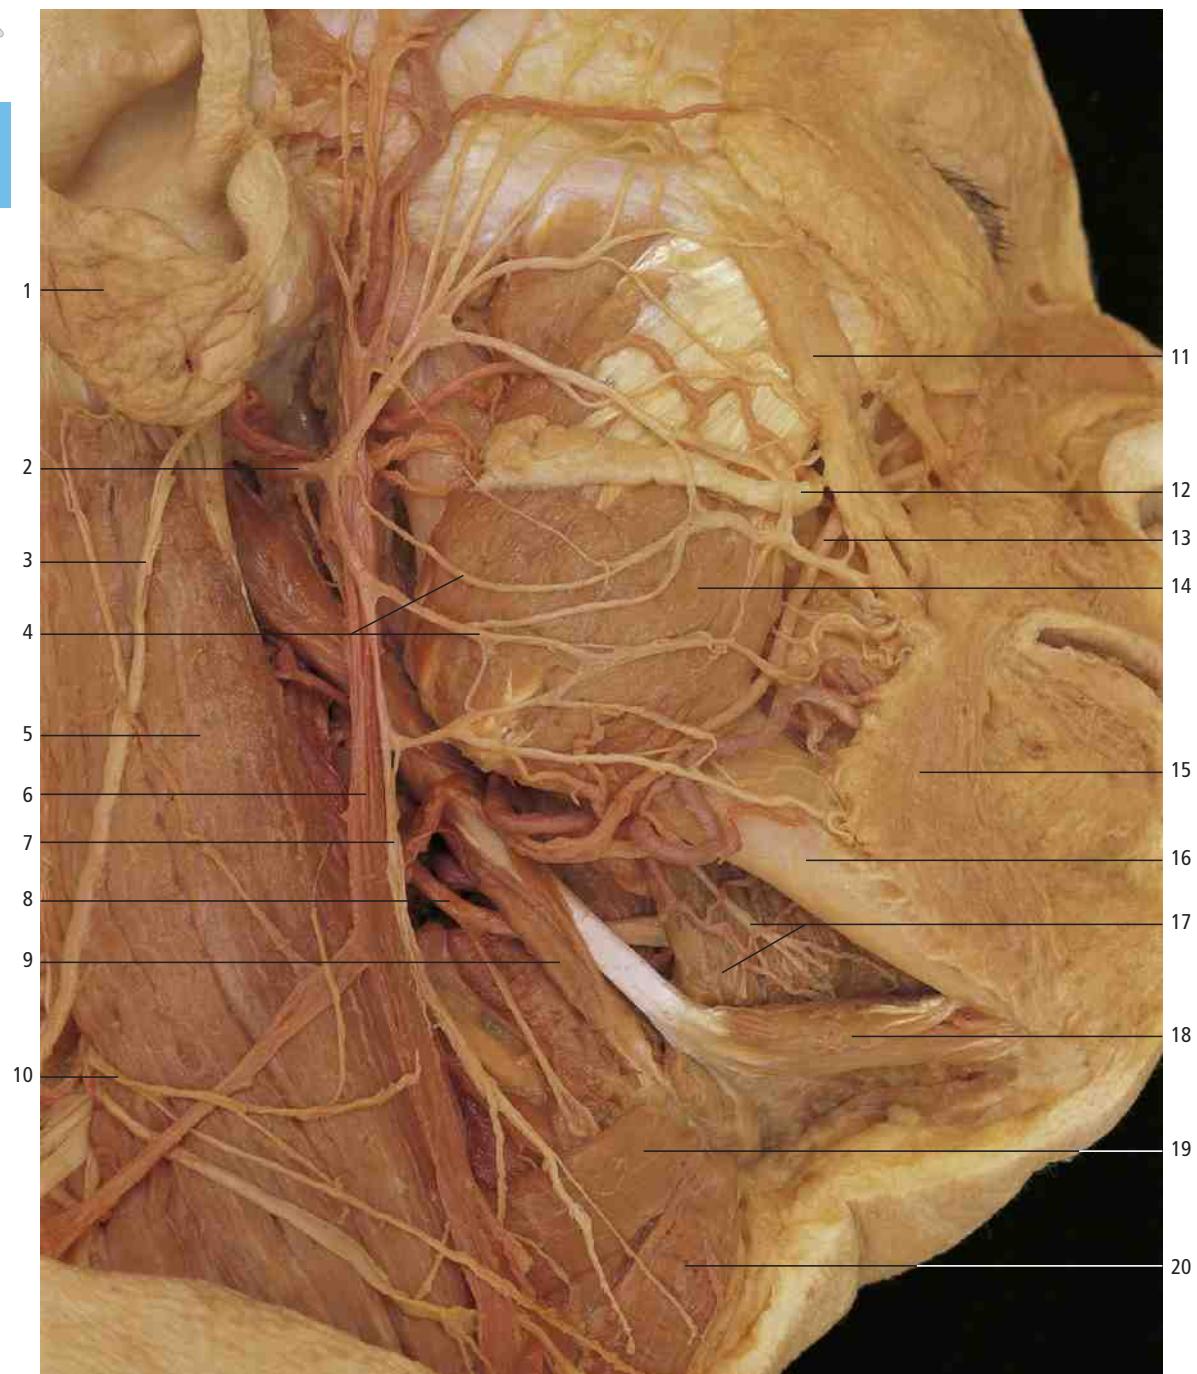

- 1 Temporoparietalis muscle
- 2 Superficial temporal artery and vein, and auriculotemporal nerve
- 3 Occipital belly of occipitofrontalis muscle and greater occipital nerve (C₂)
- 4 Facial nerve (n. VII)
- 5 Lesser occipital nerve and occipital artery
- 6 Transverse facial artery
- 7 Masseter muscle
- 8 Parotid gland and great auricular nerve
- 9 Splenius capitis muscle
- 10 Trapezius muscle
- 11 Punctum nervosum, point of distribution of cutaneous nerves of cervical plexus
- 12 Sternocleidomastoid muscle and external jugular vein
- 13 Supraclavicular nerves
- 14 Brachial plexus
- 15 Supra-orbital nerves
- 16 Orbicularis oculi muscle
- 17 Angular artery (terminal branch of facial artery)
- 18 Nasalis muscle
- 19 Zygomaticus major muscle
- 20 Parotid duct
- 21 Zygomatic and buccal branches of facial nerve
- 22 Orbicularis oris muscle
- 23 Depressor anguli oris muscle
- 24 Platysma muscle
- 25 Cervical branch of facial nerve (anastomosing with transverse cervical nerve of cervical plexus)
- 26 Facial artery and vein
- 27 Temporal branches of facial nerve
- 28 Submandibular gland
- 29 Mandible
- 30 Mylohyoideus muscle and nerve
- 31 Anterior belly of digastric muscle
- 32 Omohyoid muscle
- 33 Greater petrosal nerve
- 34 Geniculate ganglion
- 35 Chorda tympani
- 36 Posterior auricular nerve
- 37 Styломastoid foramen
- 38 Sternocleidomastoid muscle and retromandibular vein

Main branches of facial nerve (schematic drawing).

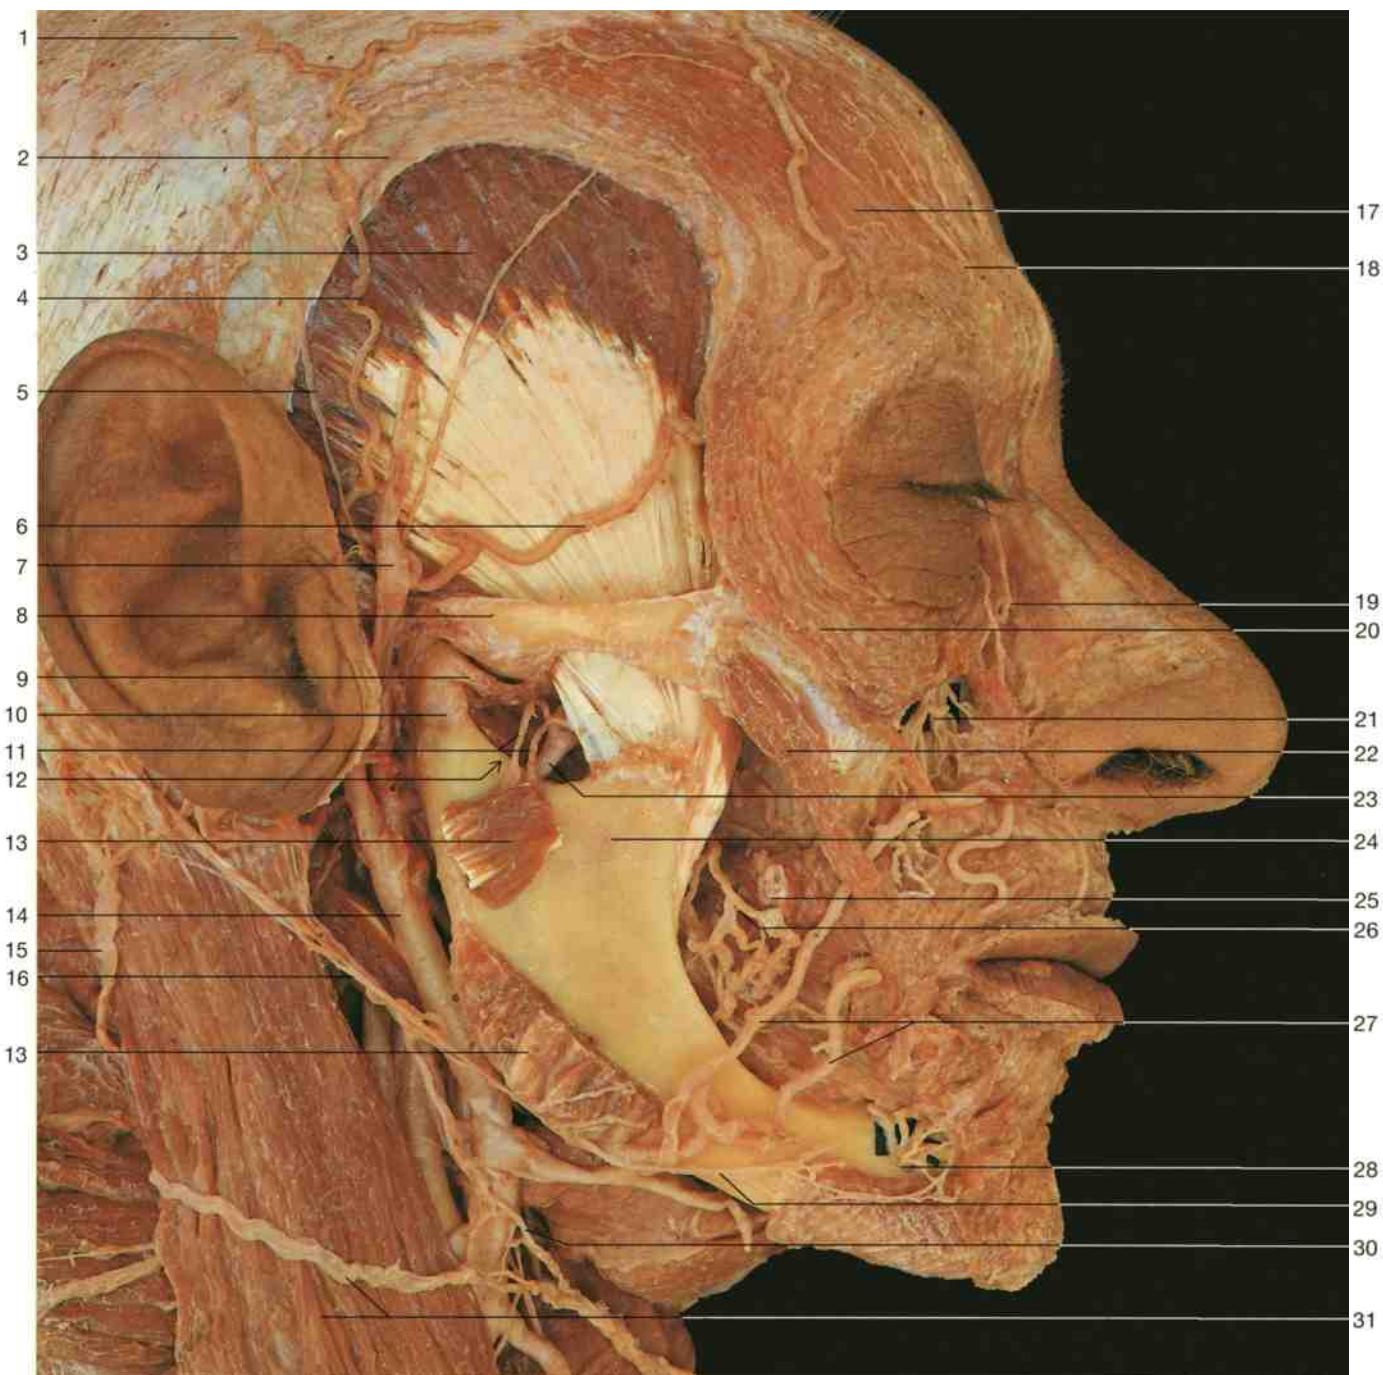

a = temporal branches; b = zygomatic branches; c = buccal branches; d = marginal mandibular branch.

Deep dissection of facial nerve. Retromandibular and submandibular regions of the head (lateral aspect).

The parotid gland and the submandibular gland have been removed. The parotid plexus (4) is formed by anastomosis of the temporal, zygomatic, buccal, marginal mandibular, and cervical branches of the facial nerve, arising in the parotid gland.

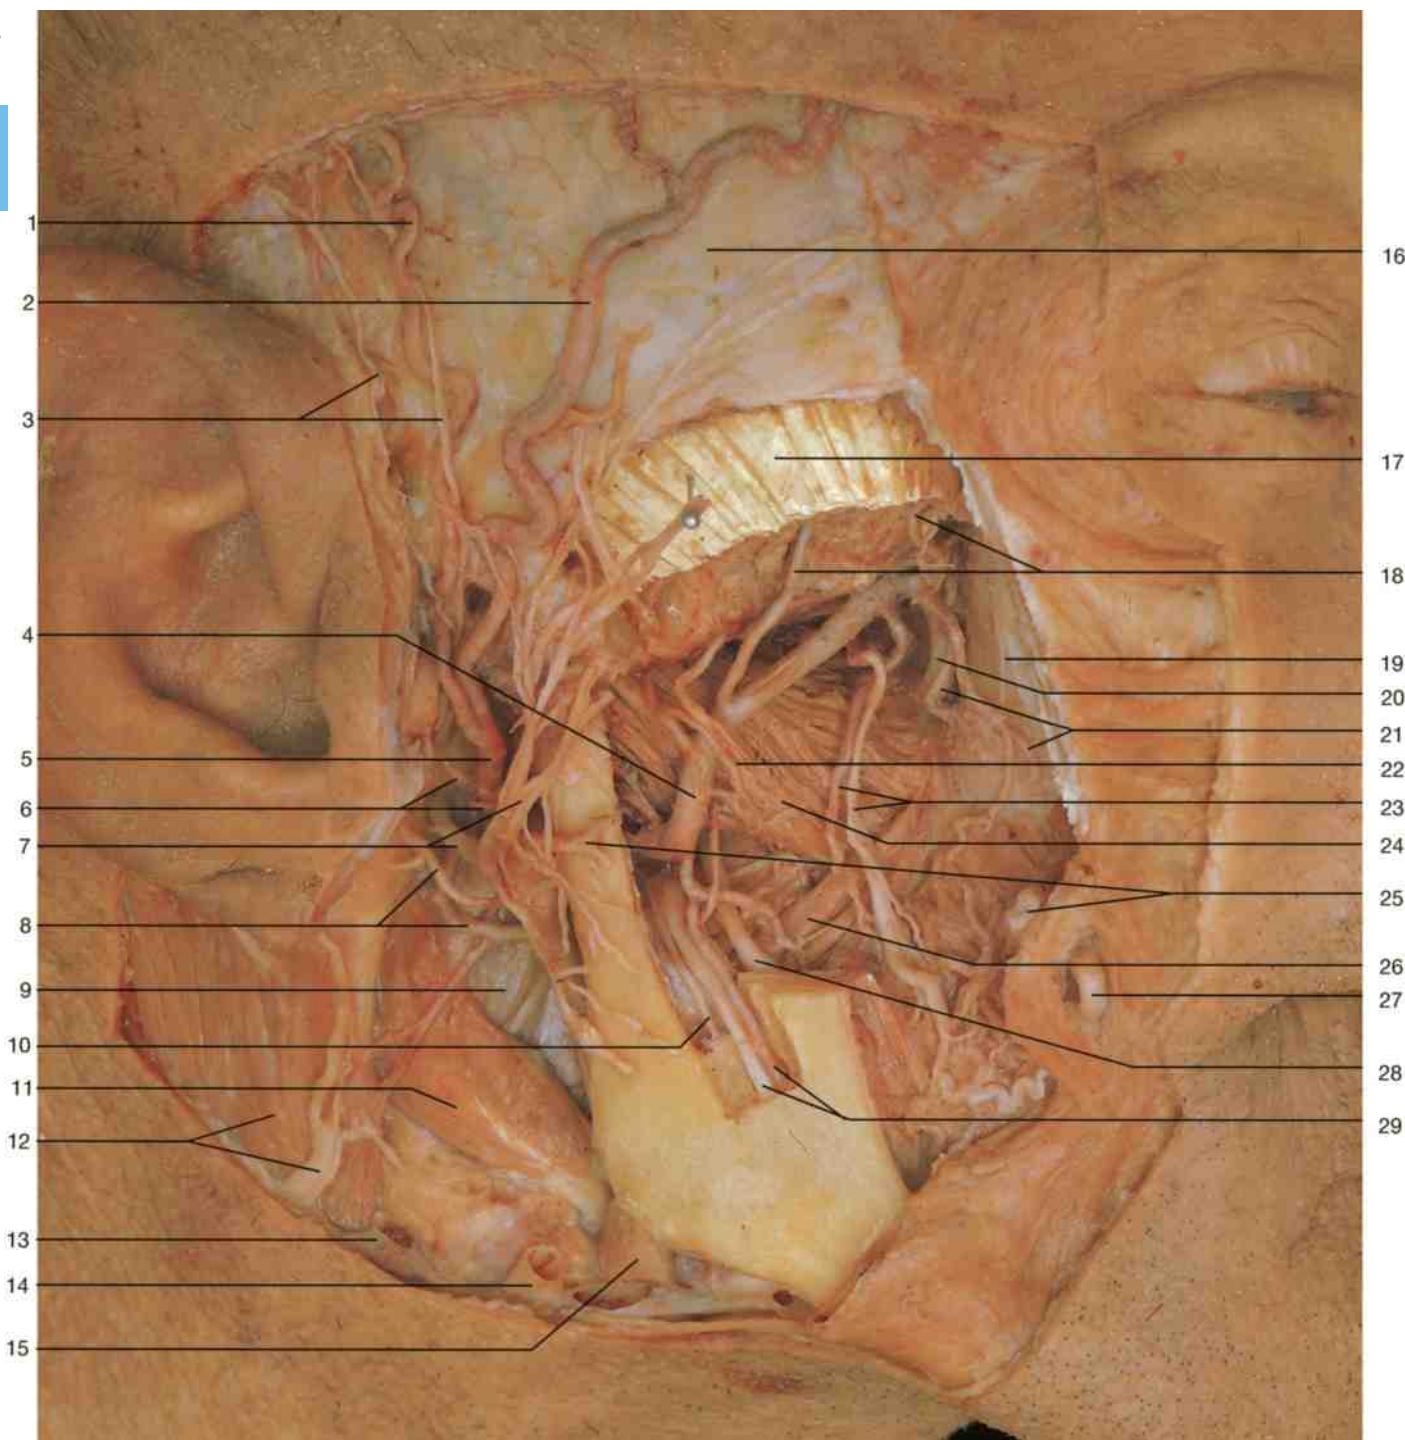

- | | | |
|-----------------------------------|------------------------------|---------------------------------------|
| 1 Parotid gland | 8 Hypoglossal nerve (n. XII) | 15 Depressor anguli oris muscle |
| 2 Facial nerve (n. VII) | 9 Stylohyoid muscle | 16 Mandible |
| 3 Great auricular nerve | 10 Transverse cervical nerve | 17 Mylohyoid muscle and nerve |
| 4 Parotid plexus | 11 Zygomaticus major muscle | 18 Anterior belly of digastric muscle |
| 5 Sternocleidomastoid muscle | 12 Parotid duct | 19 Omohyoid muscle |
| 6 Retromandibular vein | 13 Facial artery | 20 Sternohyoid muscle |
| 7 Cervical branch of facial nerve | 14 Masseter muscle | |

Lateral superficial aspect of the face. Masseter muscle and temporal fascia have been partly removed to display the masseteric artery and nerve.

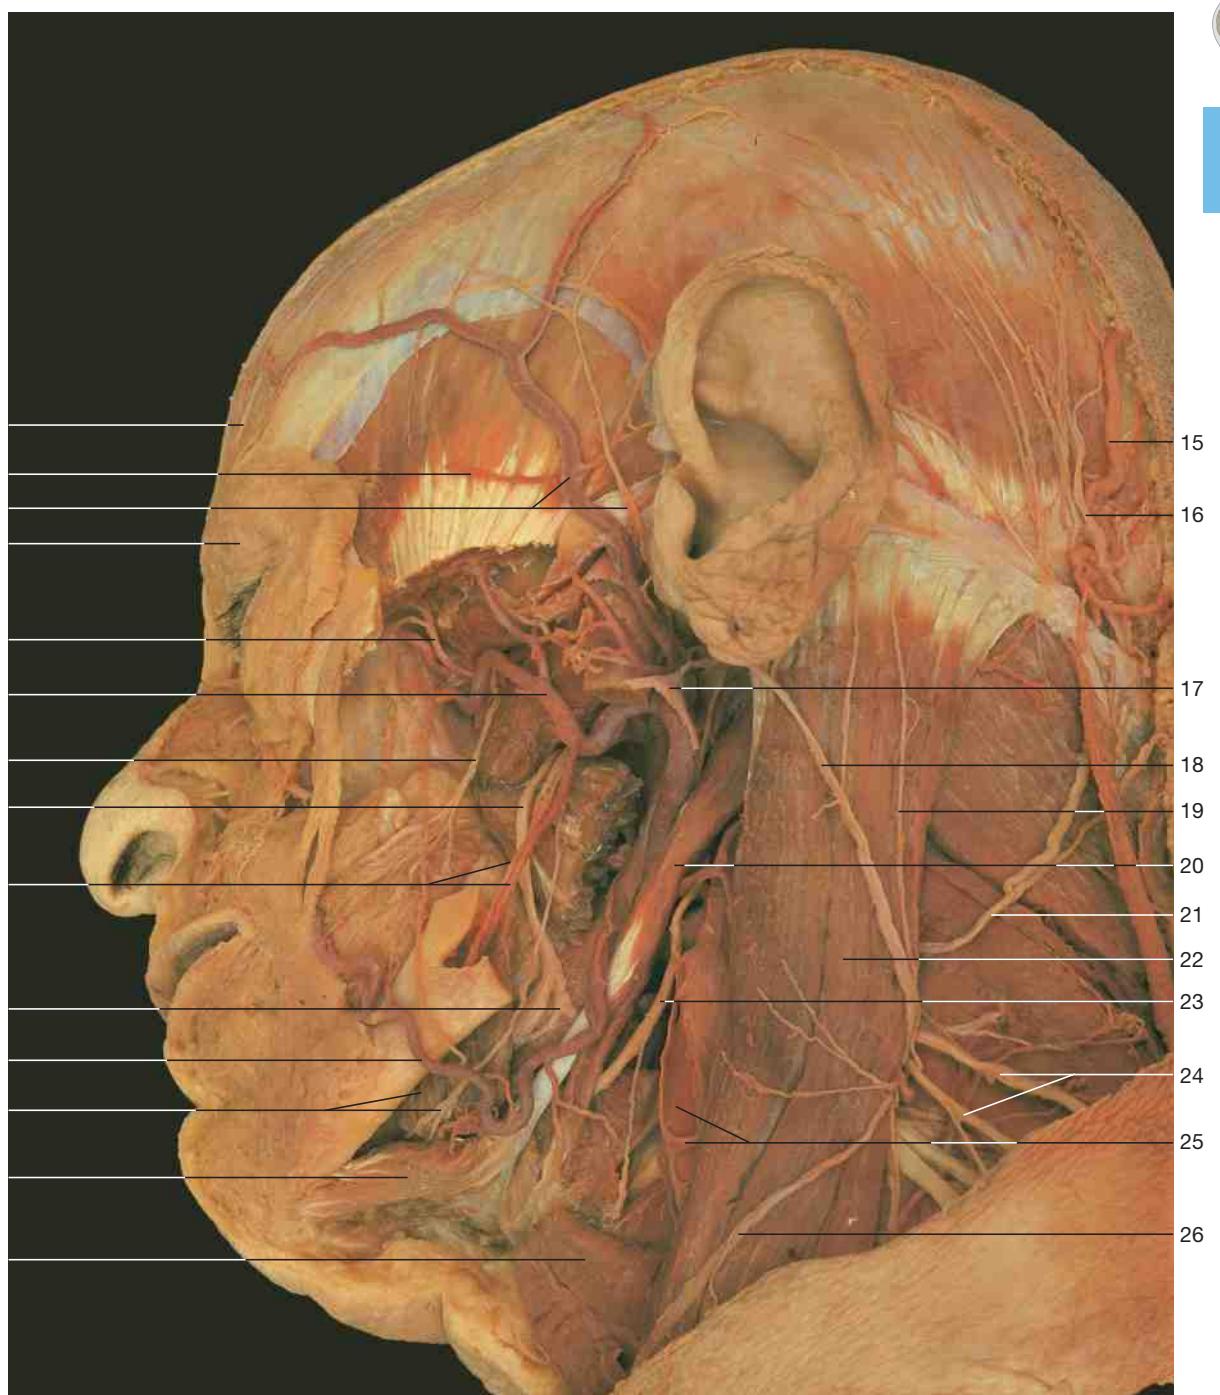

- 1 Galea aponeurotica
- 2 Temporal fascia
- 3 Temporalis muscle
- 4 Parietal branch of superficial temporal artery
- 5 Auriculotemporal nerve
- 6 Frontal branch of superficial temporal artery
- 7 Superficial temporal vein
- 8 Zygomatic arch
- 9 Articular disc of temporomandibular joint

- 10 Head of mandible
- 11 Masseteric artery and nerve
- 12 Mandibular notch
- 13 Masseter muscle (divided)
- 14 External carotid artery
- 15 Great auricular nerve
- 16 Facial nerve (reflected)
- 17 Frontal belly of occipitofrontalis muscle
- 18 Medial branch of supra-orbital nerve
- 19 Angular artery
- 20 Orbicularis oculi muscle
- 21 Infra-orbital nerve
- 22 Zygomaticus major muscle
- 23 Maxillary artery
- 24 Coronoid process
- 25 Parotid duct (divided)
- 26 Buccal nerve
- 27 Facial artery and vein
- 28 Mental nerve
- 29 Mandibular branch of facial nerve
- 30 Cervical branch of facial nerve
- 31 Transverse cervical nerve
(communicating branch with facial nerve) and sternocleidomastoid muscle

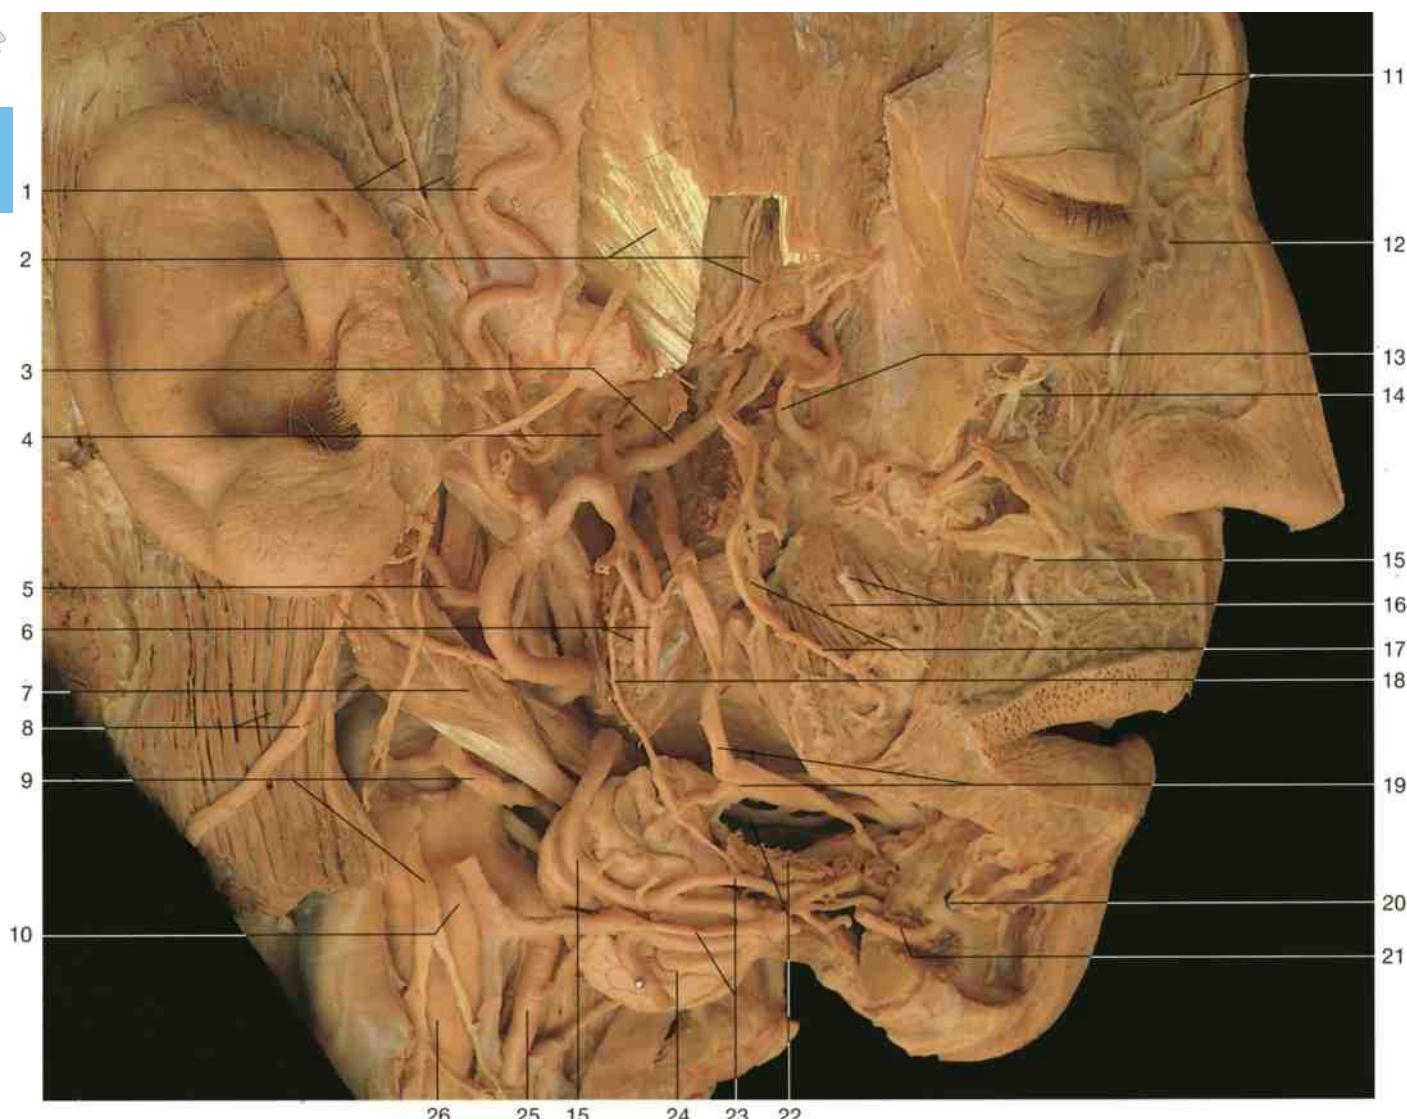

Deep dissection of facial and retromandibular regions. The coronoid process together with the insertions of temporalis muscle have been removed to display the maxillary artery. The upper part of the mandibular canal has been opened.

- | | | |
|---|---|---|
| 1 Parietal branch of the superficial temporal artery | 10 Mylohyoid nerve | 22 Masseteric artery and nerve |
| 2 Frontal branch of the superficial temporal artery | 11 Posterior belly of digastric muscle | 23 Buccal nerve and artery |
| 3 Auriculotemporal nerve | 12 Great auricular nerve and sternocleidomastoid muscle | 24 Lateral pterygoid |
| 4 Maxillary artery | 13 External jugular vein | 25 Transverse facial artery and parotid duct (divided) |
| 5 Superficial temporal artery | 14 Retromandibular vein | 26 Medial pterygoid muscle |
| 6 Communicating branches between facial and auriculotemporal nerves | 15 Submandibular gland | 27 Facial artery |
| 7 Facial nerve | 16 Temporal fascia | 28 Lingual nerve |
| 8 Posterior auricular artery and anterior auricular branch of superficial temporal artery | 17 Temporalis tendon | 29 Inferior alveolar artery and nerve (mandibular canal opened) |
| 9 Internal jugular vein | 18 Deep temporal arteries | |
| | 19 Posterior superior alveolar nerve | |
| | 20 Sphenopalatine artery | |
| | 21 Posterior superior alveolar arteries | |

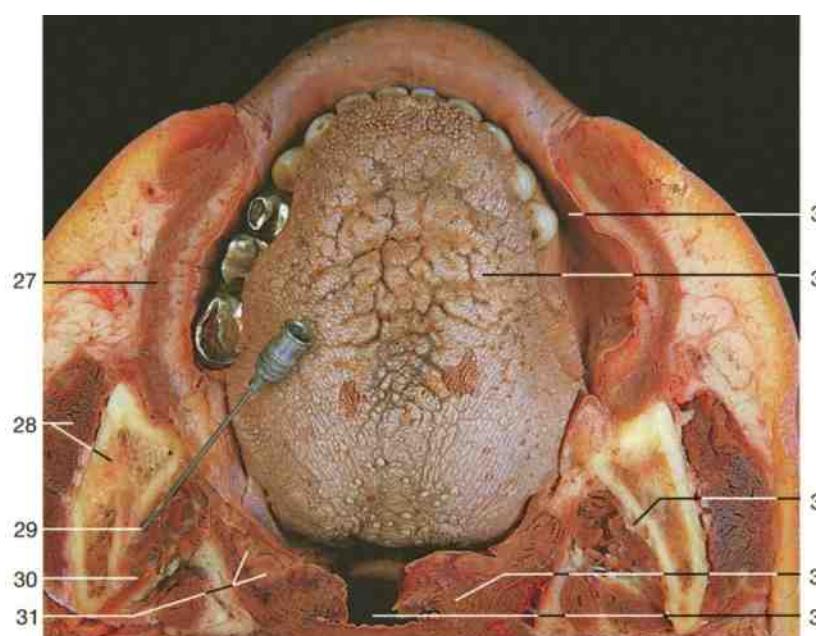

Peripharyngeal and retromandibular regions. The mandible has been partly removed (oblique lateral aspect).

- | | | |
|---|--|--|
| 1 Supra-orbital nerve (medial branch) | 10 Submandibular ganglion | 20 Posterior belly of digastric muscle |
| 2 Temporalis muscle | 11 Facial artery | 21 Accessory nerve (Var.) |
| 3 Superficial temporal artery and
auriculotemporal nerve | 12 Mylohyoid muscle and nerve | 22 Sternocleidomastoid muscle |
| 4 Orbicularis oculi muscle | 13 Anterior belly of digastric muscle | 23 Hypoglossus nerve (n. XII) |
| 5 Anterior deep temporal artery | 14 Omohyoid muscle | 24 Supraclavicular nerves
(lateral and intermediate branches) |
| 6 Maxillary artery | 15 Occipital artery | 25 Internal jugular vein and ansa
cervicalis |
| 7 Buccal nerve | 16 Greater occipital nerve (C ₂) | 26 Anterior supraclavicular nerve |
| 8 Lingual nerve | 17 Facial nerve (cut) (n. VII) | |
| 9 Inferior alveolar nerve and artery | 18 Great auricular nerve | |
| | 19 Lesser occipital nerve | |

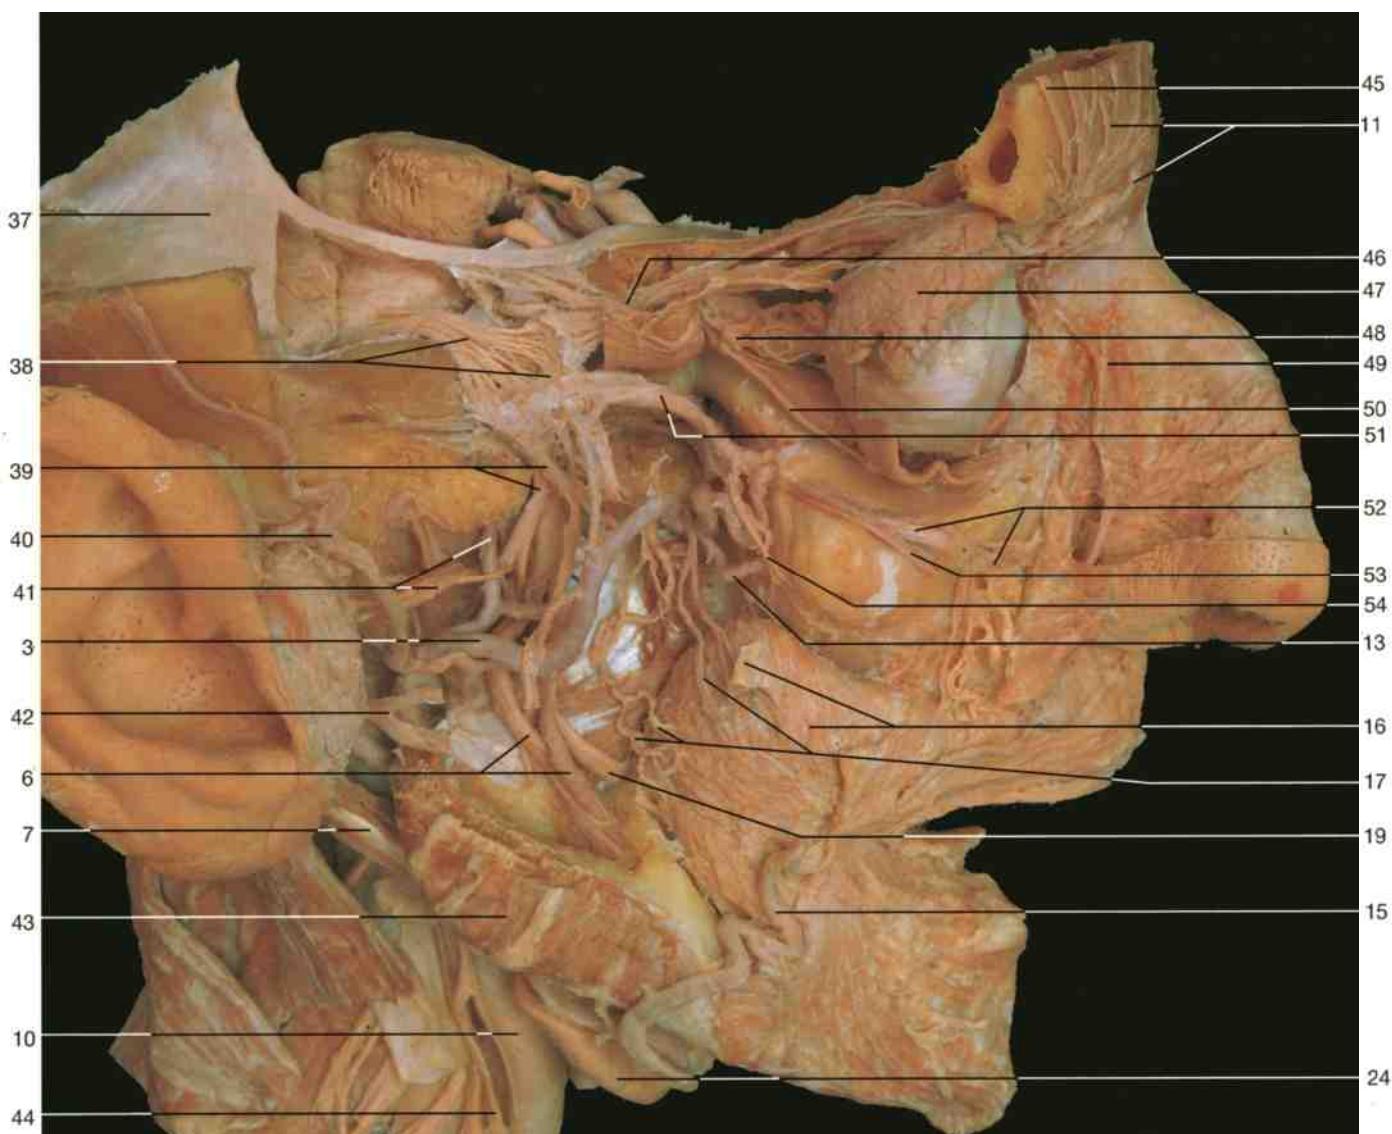

Dissection of deep facial and retromandibular regions after removal of mandible. Pterygoid muscles removed, temporalis muscle fenestrated.

Transverse section through oral cavity and pharynx. The location of inferior alveolar nerve and artery is indicated by a needle.

- 1 Superficial temporal artery and vein and auriculotemporal nerve
- 2 Temporalis tendon, deep temporal nerves and artery
- 3 Maxillary artery
- 4 Middle meningeal artery
- 5 Occipital artery
- 6 Inferior alveolar artery and nerve
- 7 Posterior belly of digastric muscle
- 8 Great auricular nerve and sternocleidomastoid muscle
- 9 Hypoglossal nerve and superior root of ansa cervicalis
- 10 External carotid artery
- 11 Supratrochlear nerve and medial branch of supra-orbital artery
- 12 Angular artery
- 13 Posterior superior alveolar artery
- 14 Infra-orbital nerve
- 15 Facial artery
- 16 Parotid duct (divided) and buccinator muscle
- 17 Buccal artery and nerve

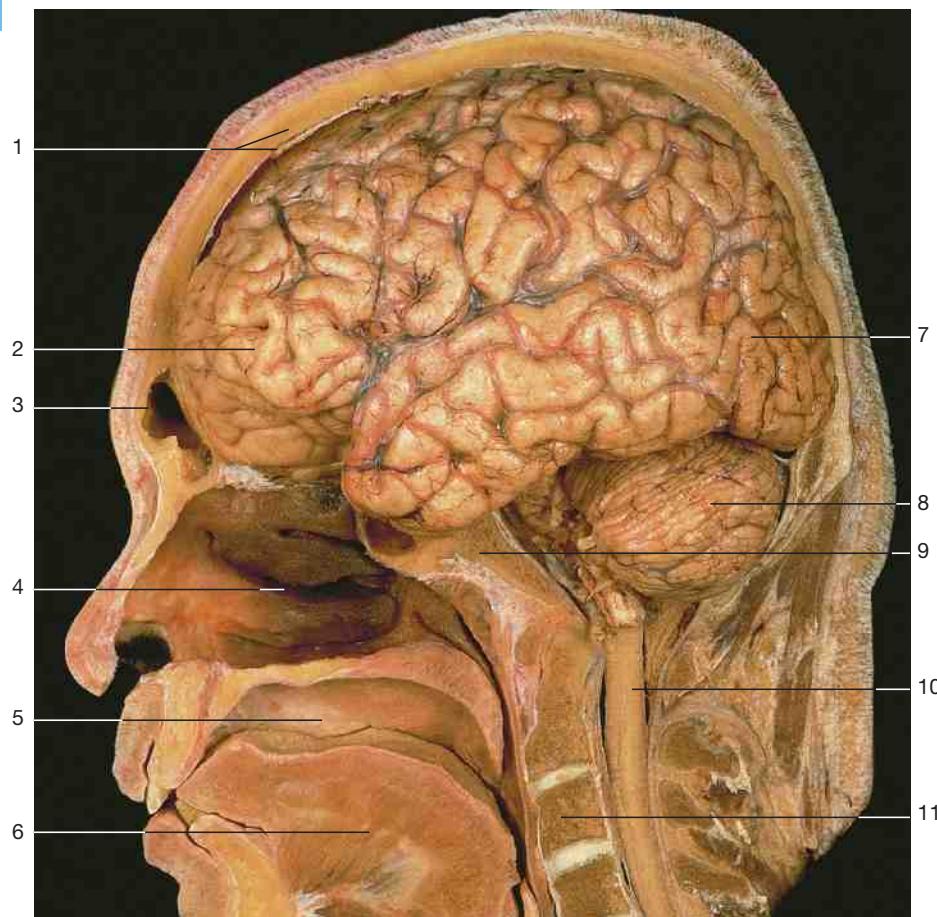

Para- and retropharyngeal regions. The mandible and the lateral wall of the orbit have been removed. The main branches of the trigeminal nerve and its ganglion are displayed.

- | | |

2.3 Brain and Sensory Organs

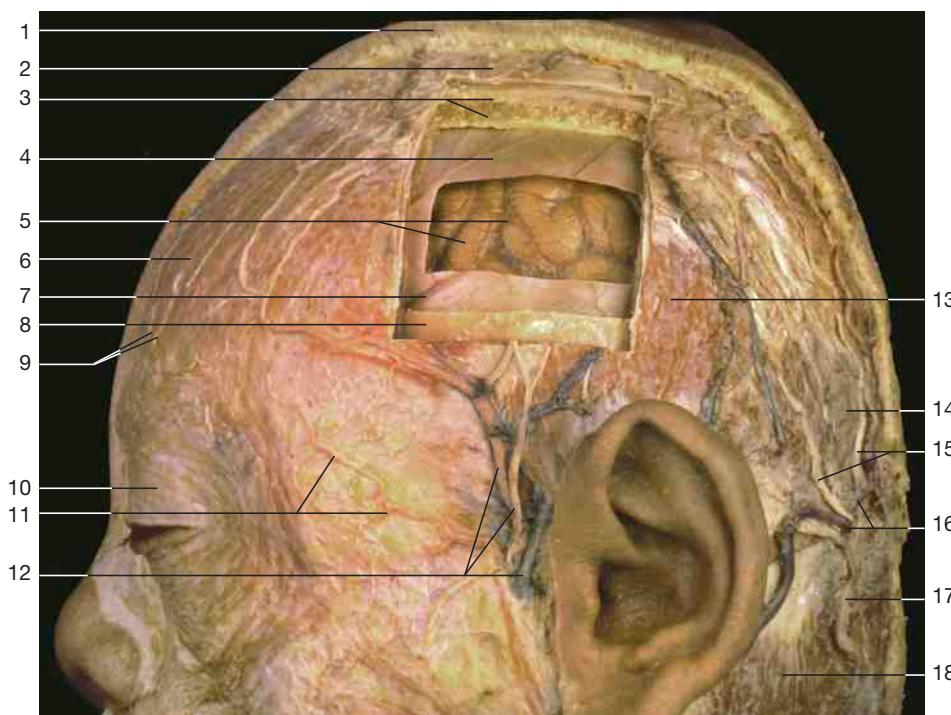

Dissection of the brain with pia mater and arachnoid in situ. The head is cut in half except for the brain, which is shown in its entirety.

The cranial cavity harbours the brain, the cerebellum, and the brain stem from where the cranial nerves emerge and exit the skull through various openings and fissures. The great sensory organs are located within the orbit (eye), the nasal cavity (olfactory system), and the petrous portion of the temporal bone (vestibulocochlear organ). The brain is enwrapped by the pia mater containing the brain vessels. The dura mater is firmly attached to the skull and provides shelter and stabilization for the brain. Interposed between pia and dura mater lies the arachnoid containing the cerebrospinal fluid.

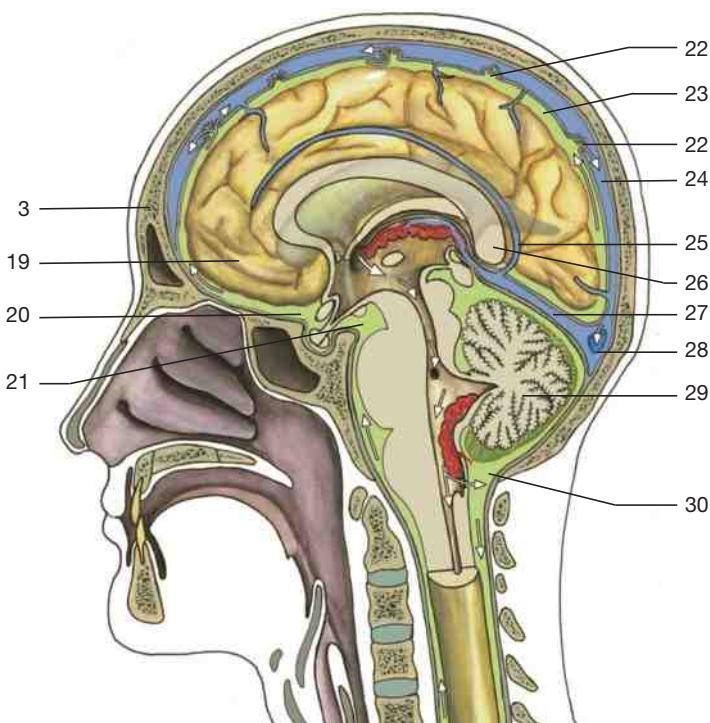

Sagittal section through the head with brain and sensory organs (schematic drawing). The eye with the optic nerve is located within the orbit; the labyrinth organ, within the petrous bone.

- 1 Vertex of the skull and dura mater
- 2 Frontal lobe covered by arachnoid and pia mater
- 3 Frontal sinus
- 4 Nasal cavity
- 5 Oral cavity
- 6 Tongue
- 7 Occipital lobe
- 8 Cerebellum
- 9 Base of skull
- 10 Spinal cord
- 11 Vertebral column
- 12 Brain stem
- 13 Eye and optic nerve (n. II)

Lateral aspect of the head. Scalp, vertex of the skull, and meninges are demonstrated by a series of window-like openings.

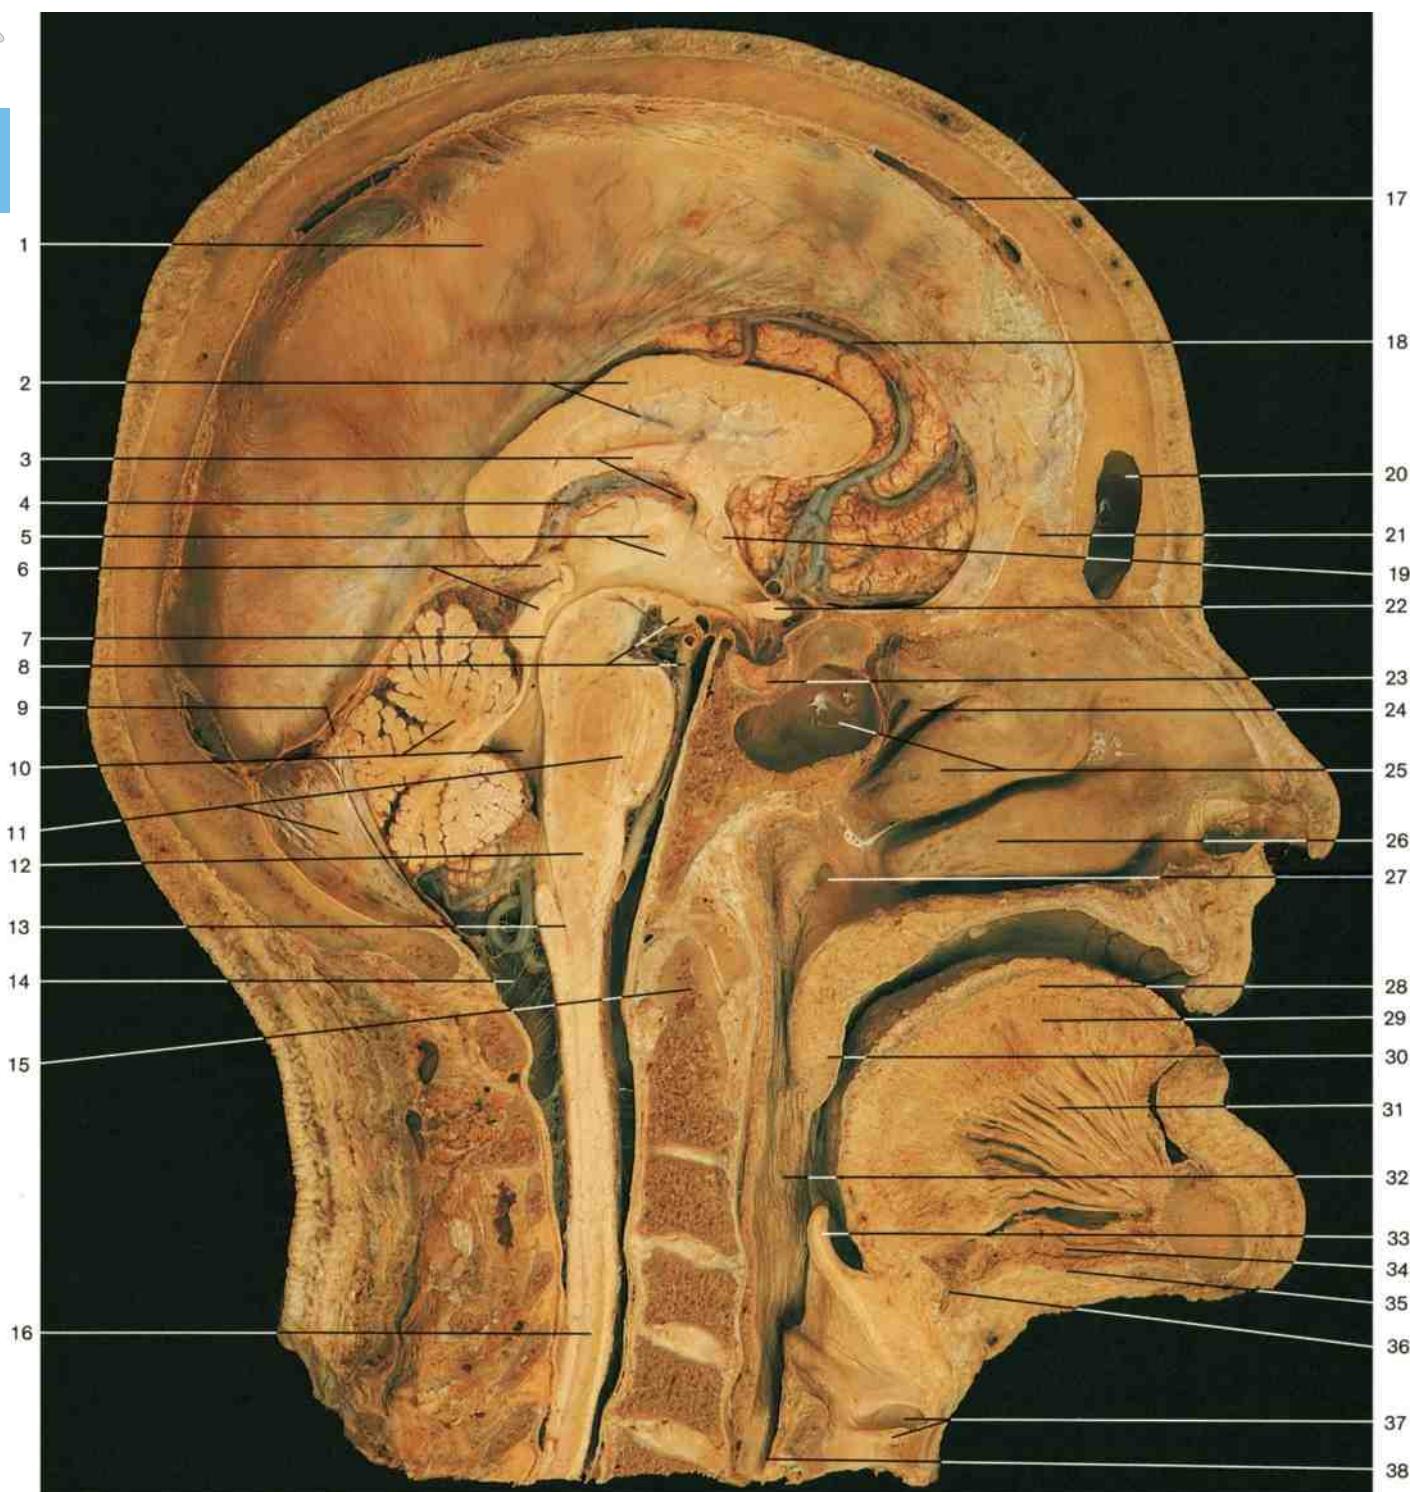

- 1 Skin
- 2 Galea aponeurotica
- 3 Skull diploe
- 4 Dura mater
- 5 Arachnoid and pia mater with cerebral vessels
- 6 Frontal belly of occipitofrontalis muscle
- 7 Branch of middle meningeal artery
- 8 Pericranium (periosteum)
- 9 Lateral and medial branches of supra-orbital nerve
- 10 Orbicularis oculi muscle
- 11 Zygomatico-orbital artery
- 12 Auriculotemporal nerve and superficial temporal artery and vein
- 13 Superior auricular muscle
- 14 Occipital belly of occipitofrontalis muscle
- 15 Occipital nerve
- 16 Occipital artery and vein
- 17 Greater occipital nerve
- 18 Sternocleidomastoid muscle
- 19 Frontal lobe
- 20 Chiasmatic cistern
- 21 Interpeduncular cistern
- 22 Arachnoid granulations
- 23 Subarachnoid space
- 24 Superior sagittal sinus
- 25 Inferior sagittal sinus
- 26 Corpus callosum
- 27 Straight sinus
- 28 Confluence of sinuses
- 29 Cerebellum
- 30 Cerebellomedullary cistern
- 31 Cerebral cortex

Subarachnoid cisterns of the brain (midsagittal section).
Green = cisterns; blue = dural sinuses and ventricles;
red = choroid plexus of third and fourth ventricles; arrows = flow of cerebrospinal fluid.

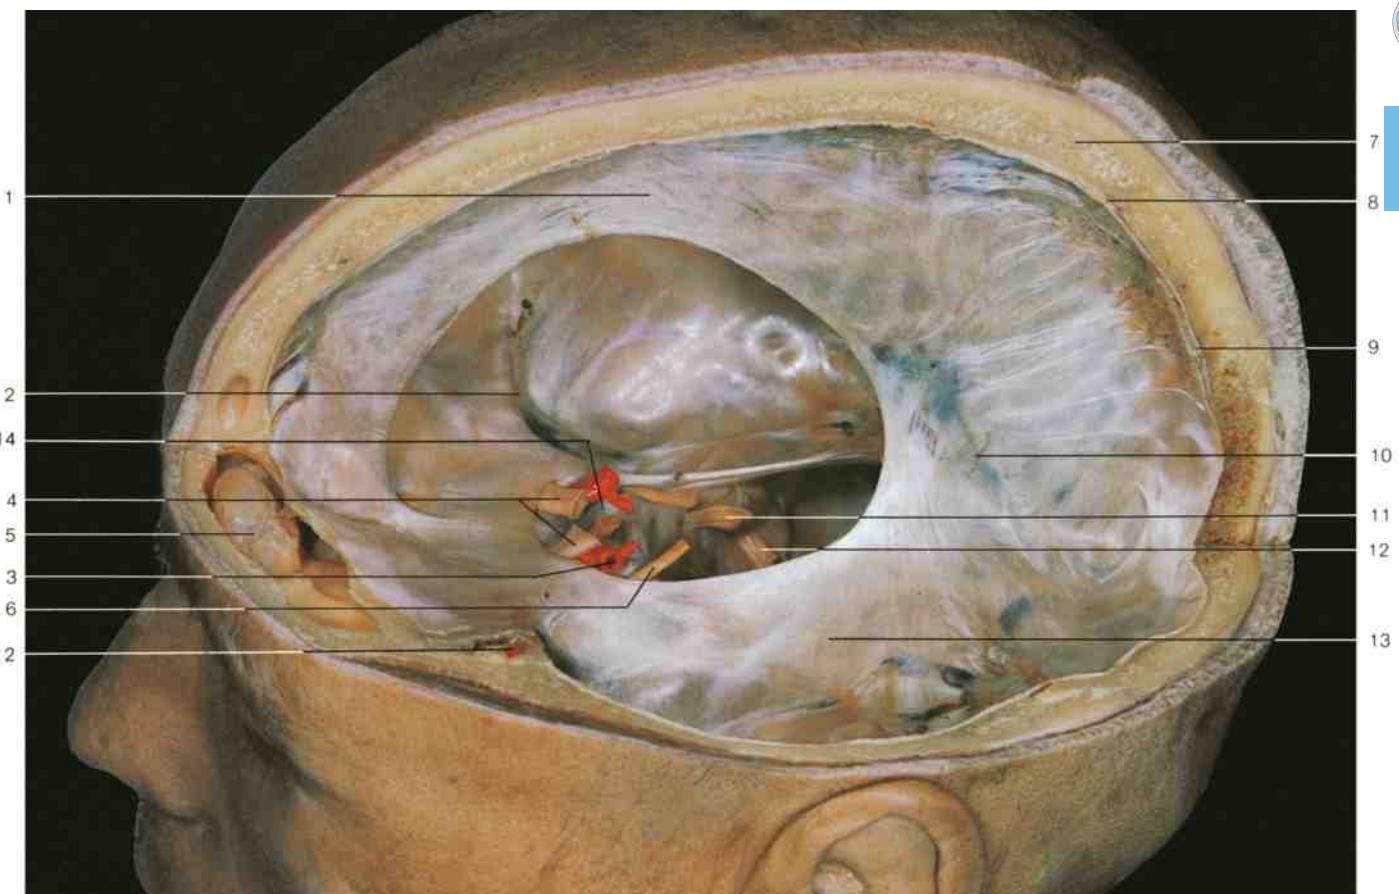

Cross section of the scalp and the meninges.
The subarachnoid space (23) is shown.

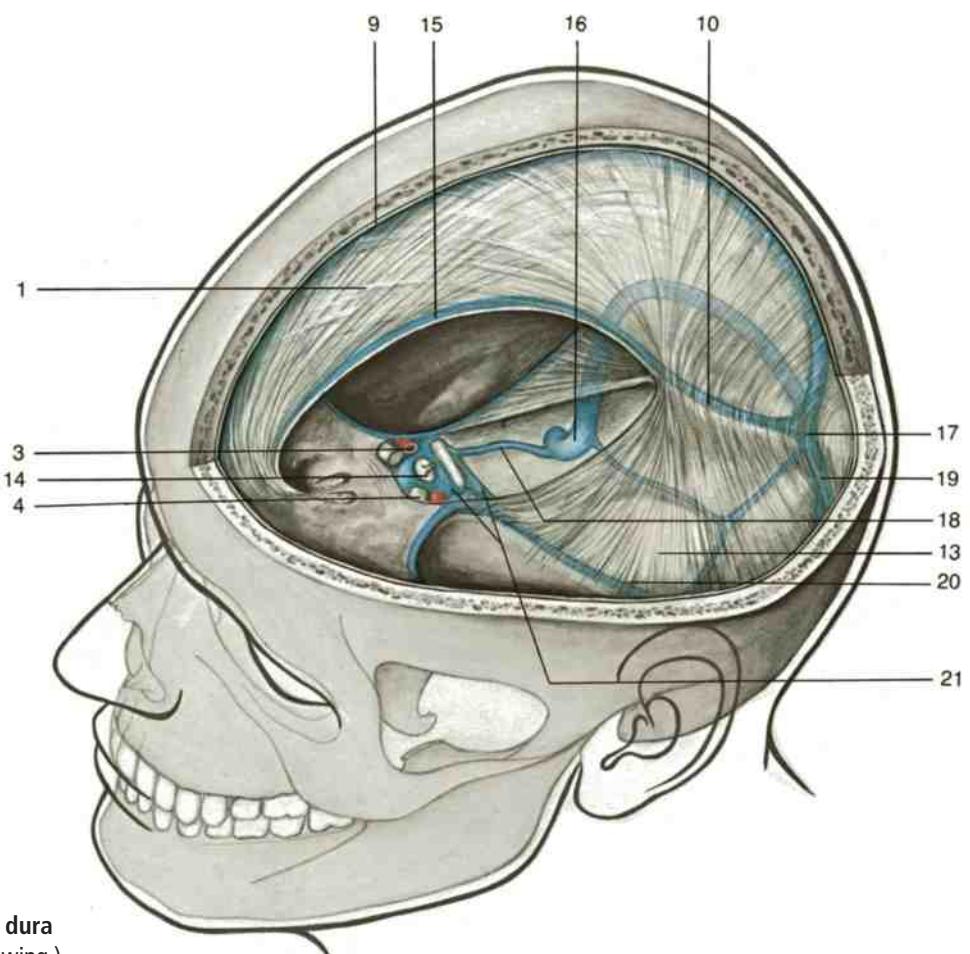

Median sagittal section through the head and neck.

- | | | |
|--|---|---|
| 1 Falx cerebri | 14 Cerebellomedullary cistern | 27 Pharyngeal opening of auditory tube |
| 2 Corpus callosum and septum pellucidum | 15 Dens of the axis (odontoid process) | 28 Superior longitudinal muscle of tongue |
| 3 Interventricular foramen and fornix | 16 Spinal cord | 29 Vertical muscle of the tongue |
| 4 Choroid plexus of third ventricle and internal cerebral vein | 17 Superior sagittal sinus | 30 Uvula |
| 5 Third ventricle and interthalamic adhesion | 18 Anterior cerebral artery | 31 Genioglossus muscle |
| 6 Pineal body and colliculi of the midbrain | 19 Anterior commissure | 32 Pharynx |
| 7 Cerebral aqueduct | 20 Frontal sinus | 33 Epiglottis |
| 8 Mamillary body and basilar artery | 21 Crista galli | 34 Geniohyoid muscle |
| 9 Straight sinus | 22 Optic chiasma | 35 Mylohyoid muscle |
| 10 Fourth ventricle and cerebellum | 23 Pituitary gland (hypophysis) | 36 Hyoid bone |
| 11 Pons and falx cerebelli | 24 Superior nasal concha | 37 Vocal fold and sinus of larynx |
| 12 Medulla oblongata | 25 Middle nasal concha and sphenoid sinus | 38 Esophagus |
| 13 Central canal | 26 Inferior nasal concha | |

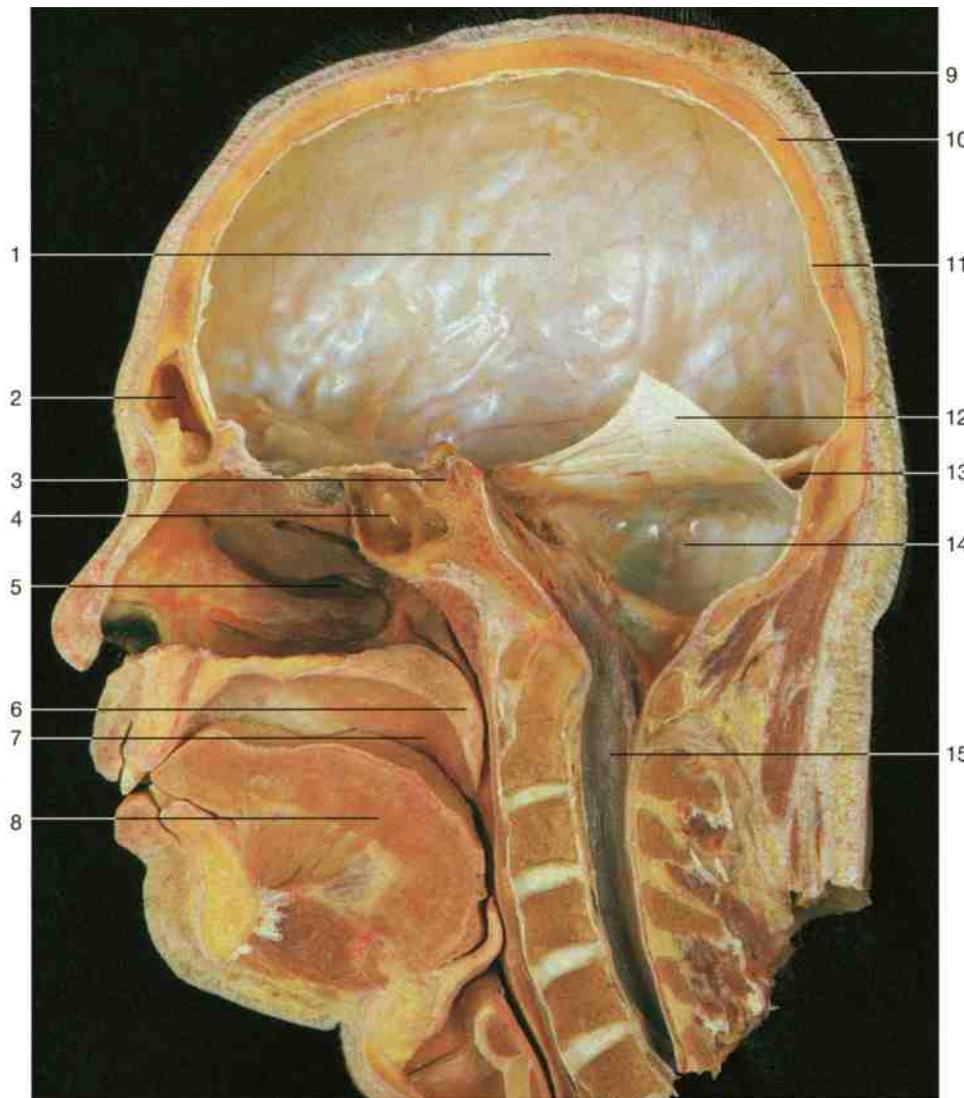

Dura mater and venous sinuses of the dura mater. The brain has been removed (oblique lateral aspect).

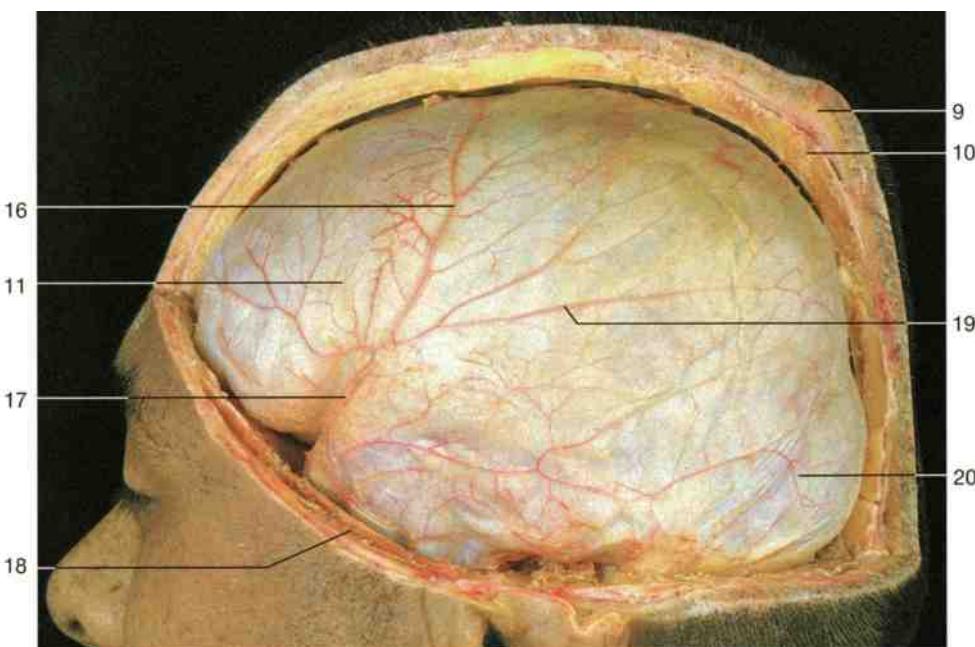

- 1 Falx cerebri
- 2 Position of middle meningeal artery and vein
- 3 Internal carotid artery
- 4 Optic nerve (n. II)
- 5 Frontal sinus
- 6 Oculomotor nerve (n. III)
- 7 Diploe
- 8 Dura mater
- 9 Superior sagittal sinus
- 10 Straight sinus
- 11 Trigeminal nerve (n. V)
- 12 Facial and vestibulocochlear nerve (n. VII and n. VIII)
- 13 Tentorium cerebelli
- 14 Pituitary gland (hypophysis)
- 15 Inferior sagittal sinus
- 16 Sigmoid sinus
- 17 Confluence of sinuses
- 18 Inferior petrosal sinus
- 19 Transverse sinus
- 20 Superior petrosal sinus
- 21 Cavernous and intercavernous sinuses

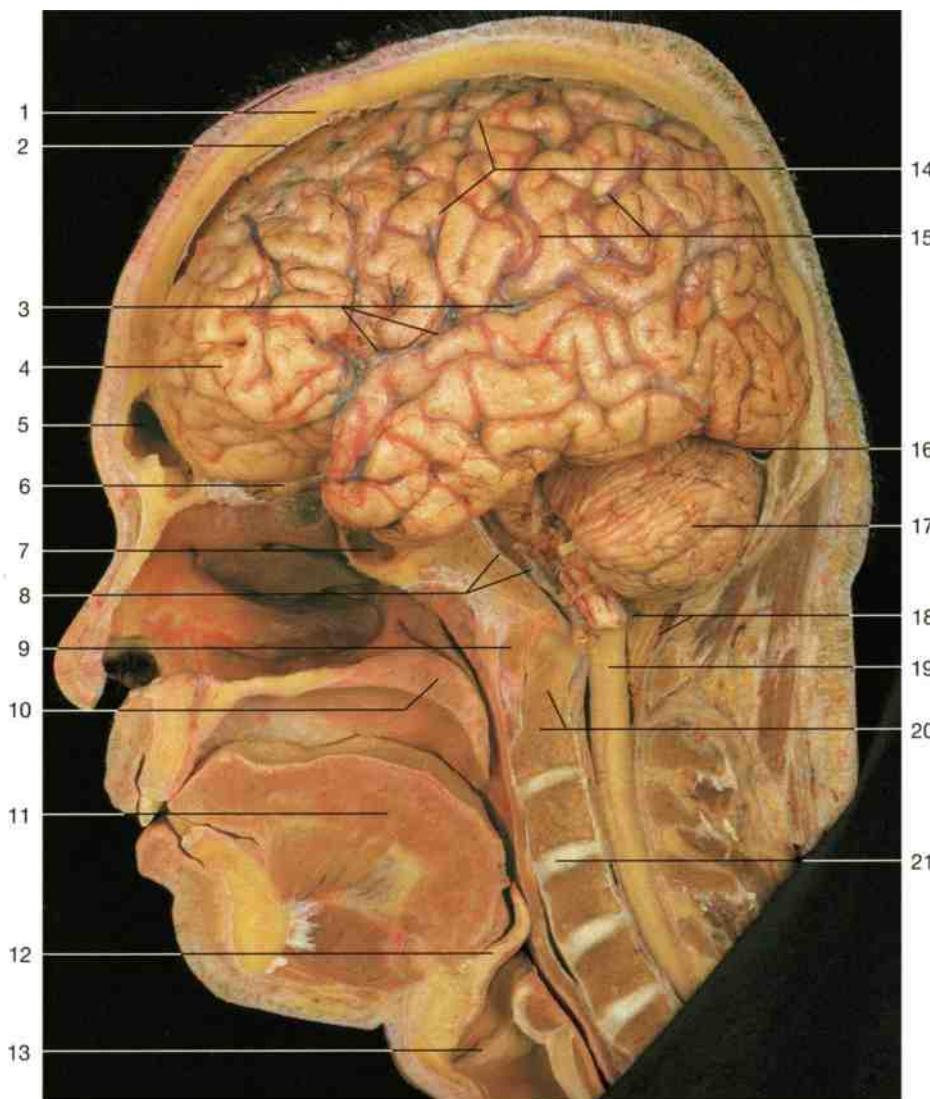

Dura mater and venous sinuses of the dura mater (left lateral aspect). (Schematic drawing.)

Median section through the head. Demonstration of dura mater covering the cranial cavity. Brain and spinal cord are removed (right half of the head, as seen from medial).

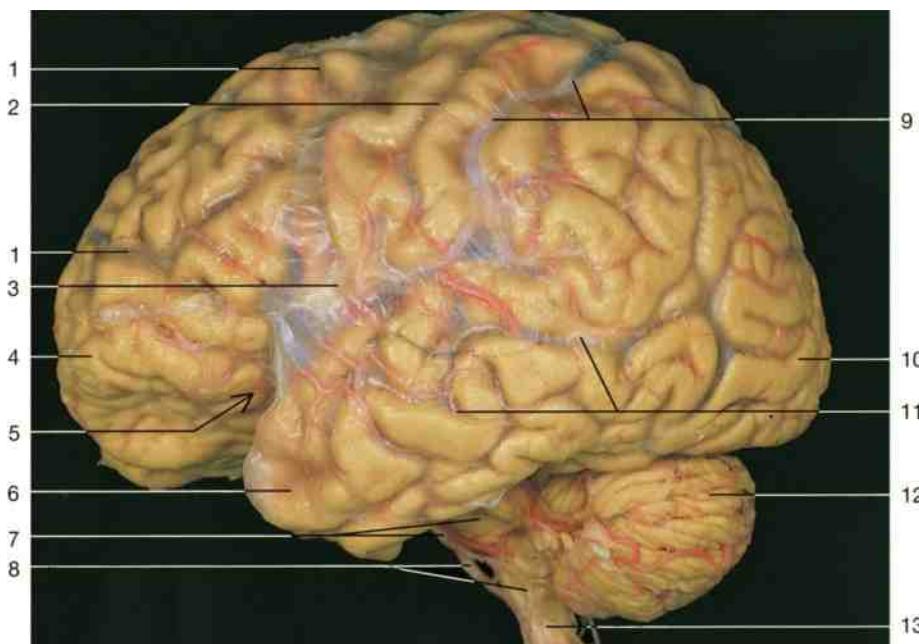

Dissection of dura mater and meningeal vessels. Left half of calvaria removed.

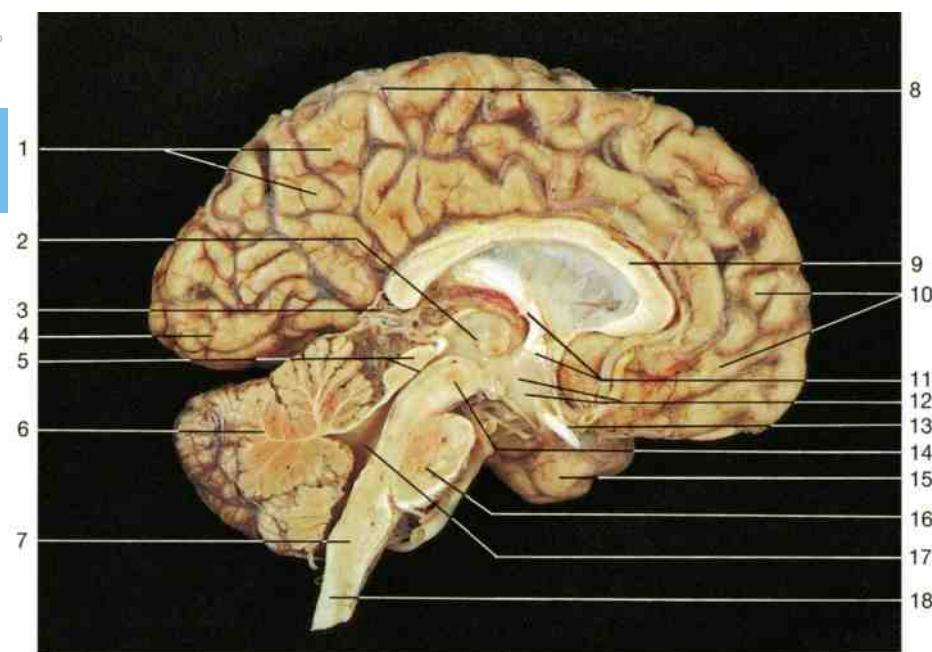

Dissection of the brain with pia mater and arachnoid in situ. The head is cut in half except for the brain, which is shown in its entirety.

- 1 Calvaria and skin of the scalp
- 2 Dura mater (divided)
- 3 Position of lateral sulcus
- 4 Frontal lobe covered by arachnoid and pia mater
- 5 Frontal sinus
- 6 Olfactory bulb
- 7 Sphenoidal sinus
- 8 Dura mater on clivus and basilar artery
- 9 Atlas (anterior arch, divided)
- 10 Soft palate
- 11 Tongue
- 12 Epiglottis
- 13 Vocal fold
- 14 Position of central sulcus
- 15 Superior cerebral veins
- 16 Tentorium (divided)
- 17 Cerebellum
- 18 Cerebellomedullary cistern
- 19 Position of foramen magnum and spinal cord
- 20 Dens of axis
- 21 Intervertebral disc

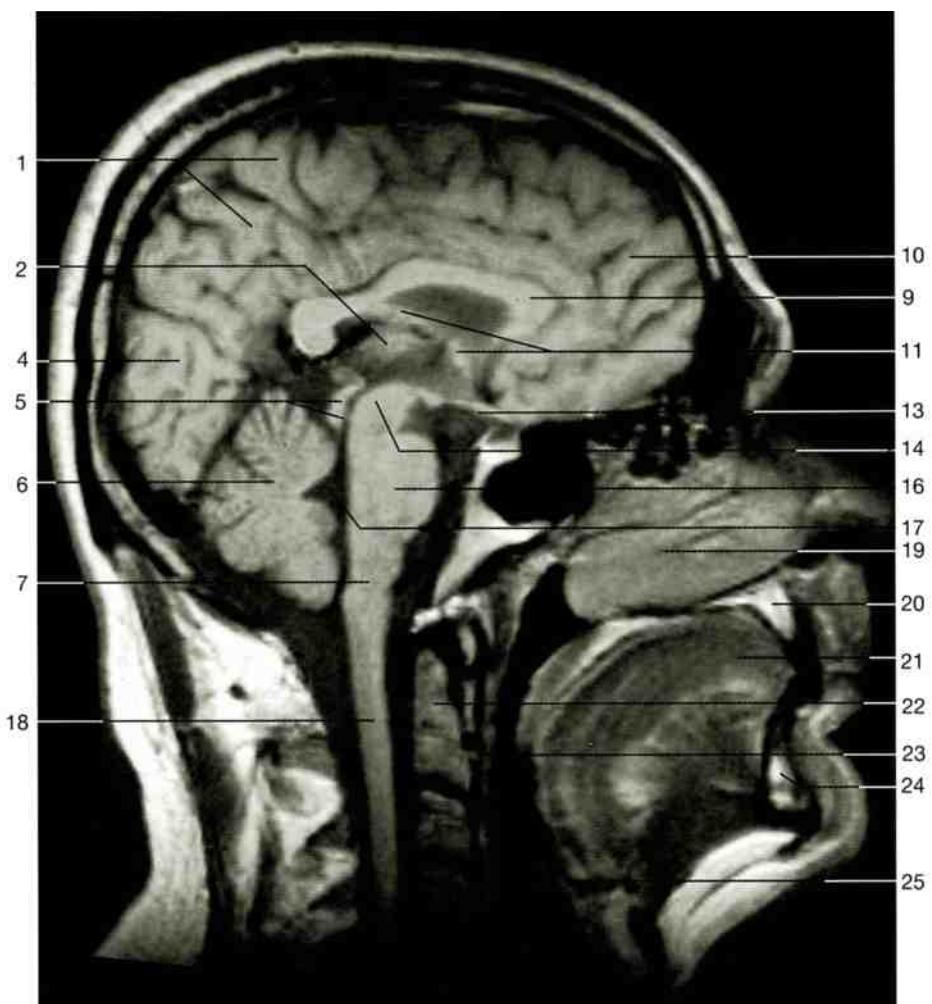

- 1 Superior cerebral veins
- 2 Position of central sulcus
- 3 Position of lateral sulcus and cistern of lateral cerebral fossa
- 4 Frontal pole
- 5 Lateral sulcus (arrow)
- 6 Temporal pole
- 7 Pons and basilar artery
- 8 Vertebral arteries
- 9 Superior anastomotic vein
- 10 Occipital pole
- 11 Inferior cerebral veins
- 12 Hemisphere of cerebellum
- 13 Medulla oblongata

Brain with pia mater and arachnoid. Frontal pole to the left (lateral aspect).

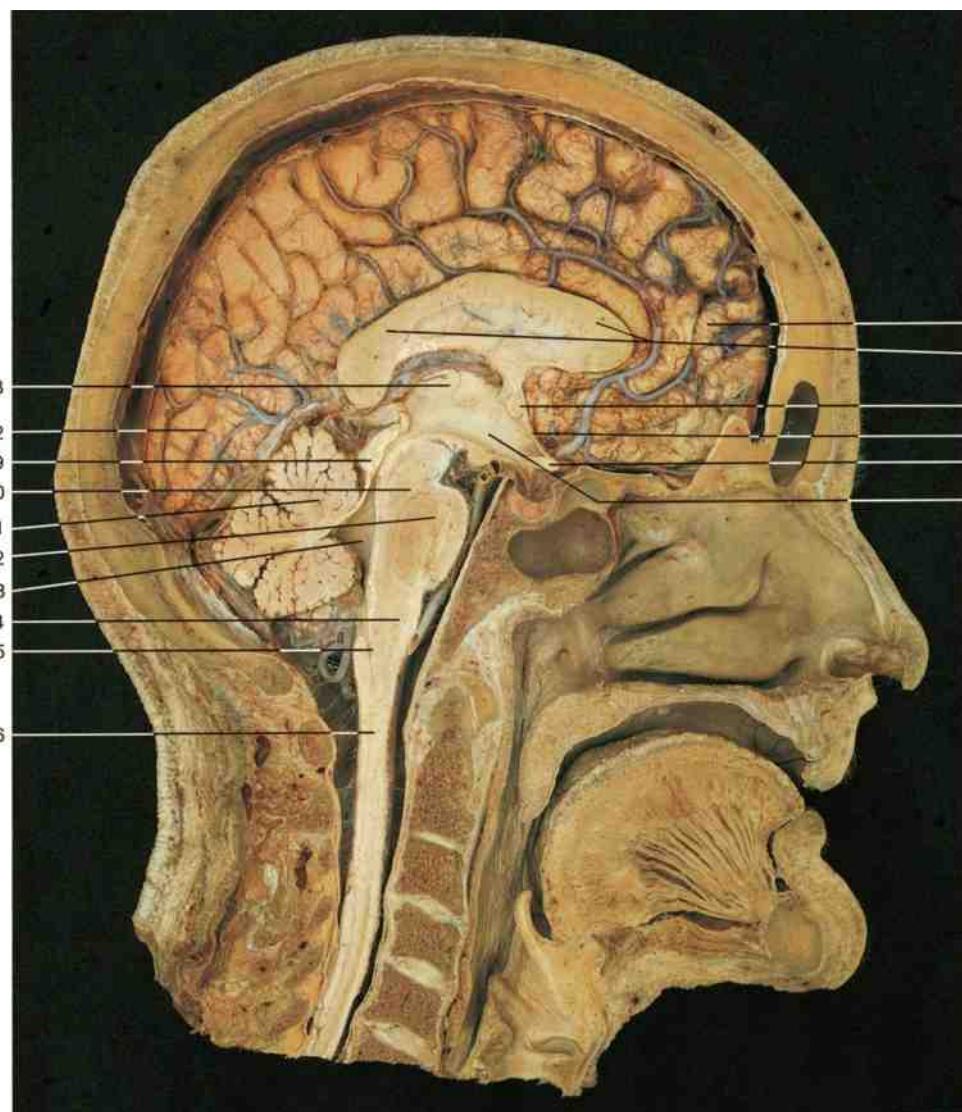

Brain and brain stem, median section. Frontal pole to the right.

- 1 Parietal lobe
- 2 Thalamus, third ventricle, and intermediate mass
- 3 Great cerebral vein
- 4 Occipital lobe
- 5 Colliculi of the midbrain and cerebral aqueduct
- 6 Cerebellum
- 7 Medulla oblongata
- 8 Central sulcus
- 9 Corpus callosum
- 10 Frontal lobe
- 11 Fornix and anterior commissure
- 12 Hypothalamus
- 13 Optic chiasma
- 14 Midbrain
- 15 Temporal lobe
- 16 Pons
- 17 Fourth ventricle
- 18 Spinal cord
- 19 Inferior concha and nasal cavity
- 20 Alveolar process of maxilla
- 21 Tongue
- 22 Dens of axis
- 23 Oral part of pharynx
- 24 Alveolar process of mandible
- 25 Epiglottis

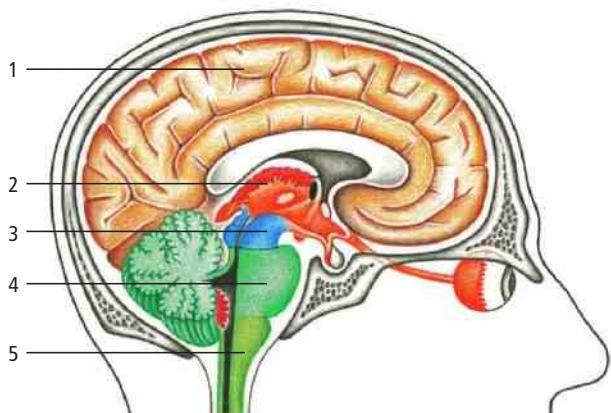

Median section through the head. (MRI scan, cf. section on opposite page.)

- 1 Frontal lobe of cerebrum
- 2 Occipital lobe of cerebrum
- 3 Corpus callosum
- 4 Anterior commissure
- 5 Lamina terminalis
- 6 Optic chiasma
- 7 Hypothalamus
- 8 Thalamus and third ventricle
- 9 Colliculi of the midbrain
- 10 Midbrain (inferior portion)
- 11 Cerebellum
- 12 Pons
- 13 Fourth ventricle
- 14 Medulla oblongata
- 15 Central canal
- 16 Spinal cord

Median section through the head. Regions of the brain. Falx cerebri removed.

Scheme of brain divisions (cf. table). (Schematic drawing.)
Red = choroidal plexus.

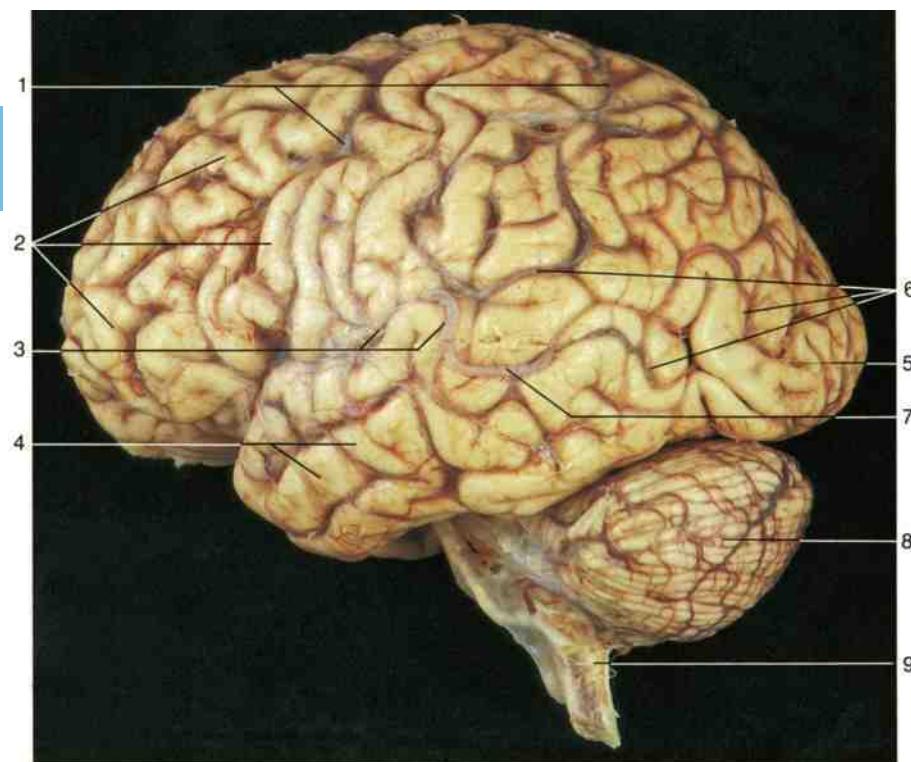

- 1 Telencephalon (yellow) with lateral ventricles
- 2 Diencephalon (orange) with third ventricle, optic nerve, and retina
- 3 Mesencephalon (blue) with cerebral aqueduct
- 4 Metencephalon (green) with fourth ventricle
- 5 Myelencephalon (yellow-green)

I. Prosencephalon (forebrain)	1. Telencephalon (cerebral hemispheres, striatum, etc.)
	2. Diencephalon (thalamus, metathalamus, hypothalamus, etc.)
II. Mesencephalon (midbrain)	3. Mesencephalon (colliculi, cerebral peduncles, tegmentum)
III. Rhombencephalon (hindbrain)	4. Metencephalon (pons, cerebellum)
	5. Myelencephalon (medulla oblongata)

Main divisions of the brain

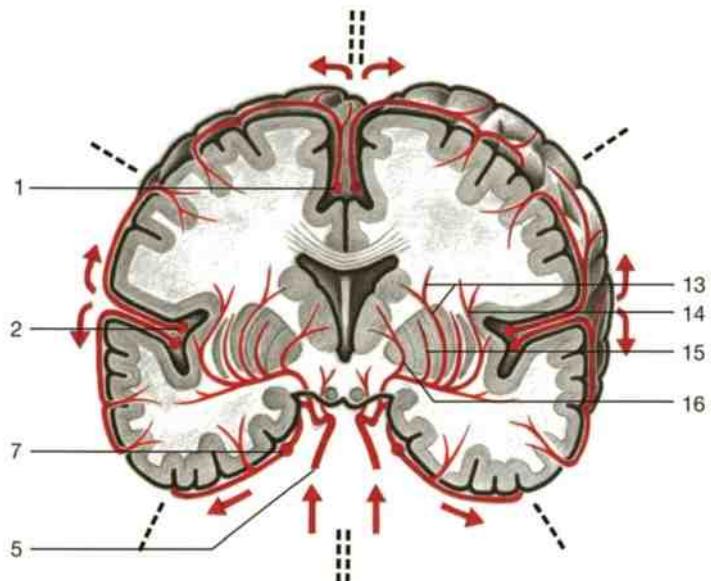

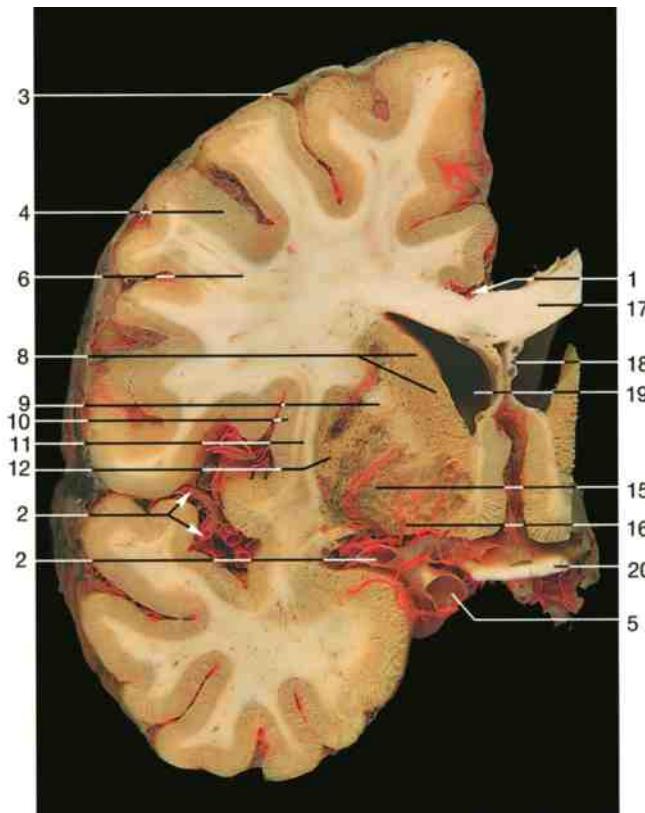

I-III = primary brain vesicles; 1-5 = secondary brain vesicles

Diencephalon, midbrain, pons, and medulla oblongata are collectively termed the **brain stem**.

Brain with pia mater. Cerebral veins (bluish). In the lateral sulcus the cistern of the lateral fossa is recognizable. Frontal lobe to the left.

- 1 Superior cerebral veins and parietal lobe
- 2 Frontal lobe
- 3 Superficial middle cerebral vein and cistern of lateral cerebral fossa
- 4 Temporal lobe
- 5 Occipital lobe
- 6 Inferior cerebral veins and transverse occipital sulcus
- 7 Inferior anastomotic vein
- 8 Cerebellum
- 9 Medulla oblongata

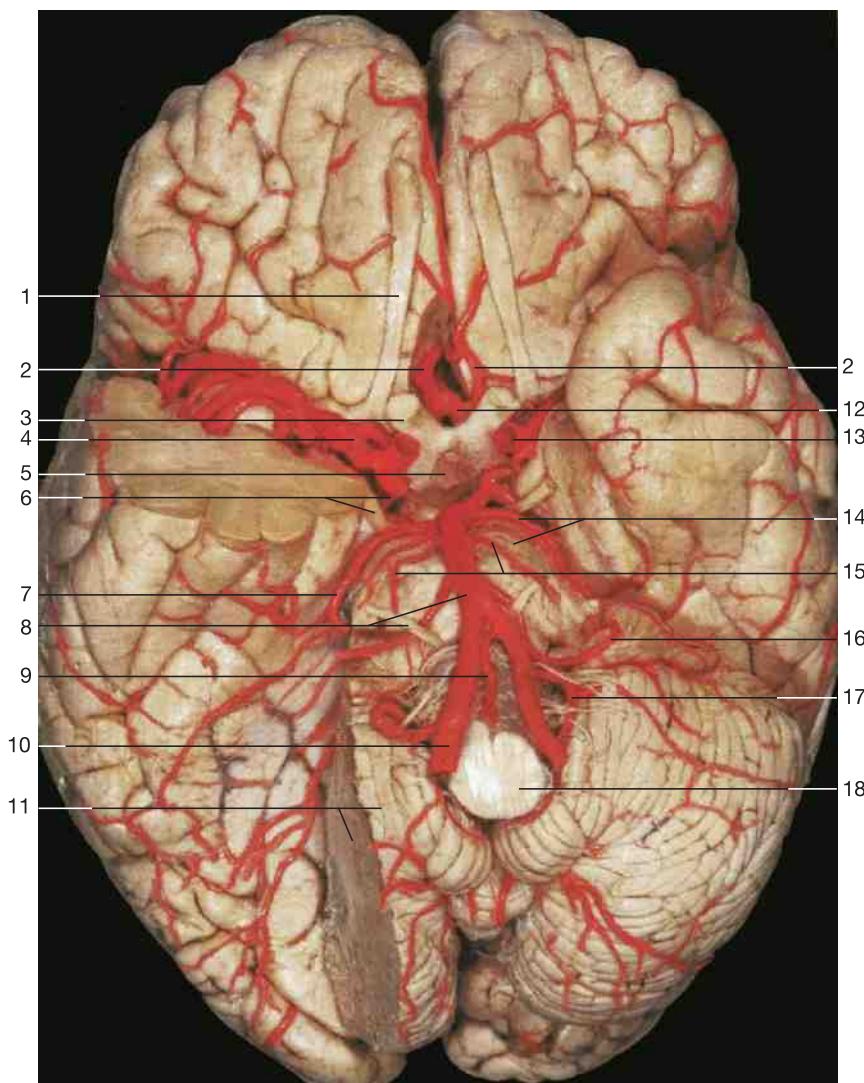

Arteries of the brain. Coronal section. Areas supplied by cortical and central arteries. Dotted lines indicate boundaries of arterial supply areas; arrows = direction of blood flow.

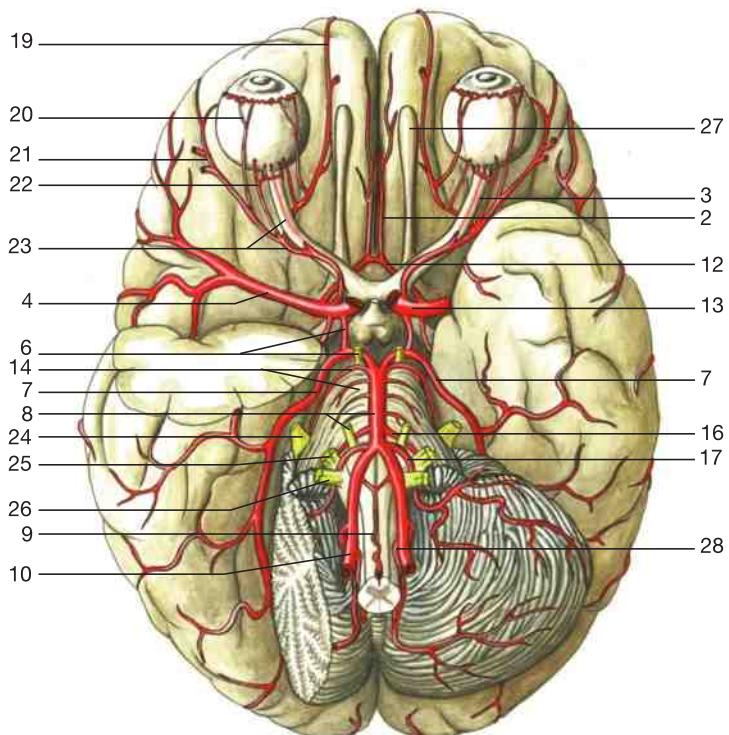

◀ **Coronal section through the right hemisphere,** showing arachnoid, pia mater, and the arterial blood supply (anterior aspect).

- 1 Anterior cerebral artery
- 2 Middle cerebral arteries
- 3 Arachnoid
- 4 Cortex
- 5 Internal carotid artery
- 6 Frontal lobe (white matter)
- 7 Posterior cerebral artery
- 8 Caudate nucleus
- 9 Internal capsule
- 10 Insular lobe
- 11 Claustrum
- 12 Putamen
- 13 Posterior striate branch
- 14 Insular artery

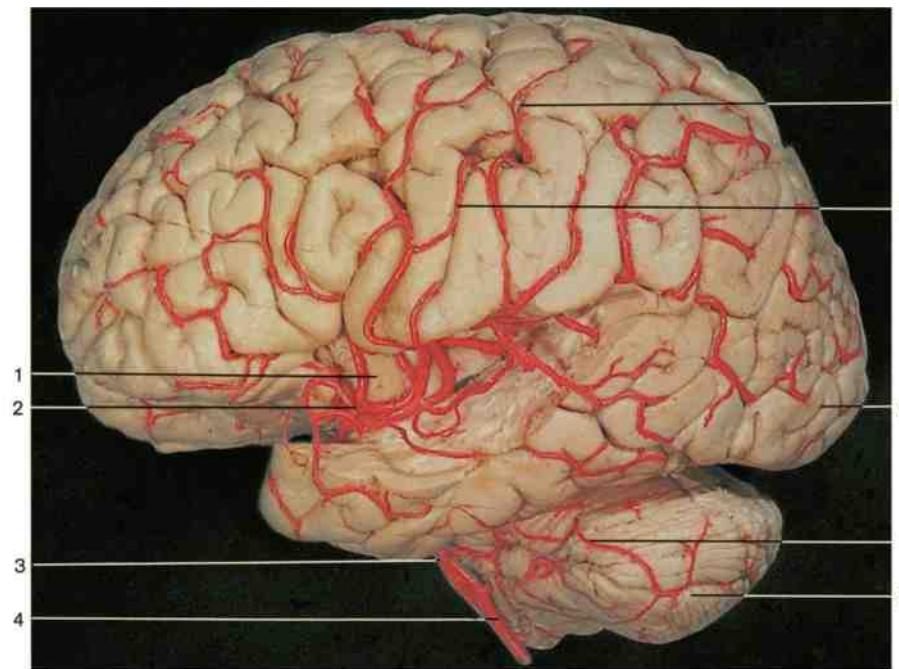

- 15 Pallidostriate artery
- 16 Thalamic artery
- 17 Corpus callosum
- 18 Septum pellucidum
- 19 Lateral ventricle
- 20 Optic chiasma

Arteries of the brain (inferior aspect, frontal pole above). Right temporal lobe and cerebellum partly removed.

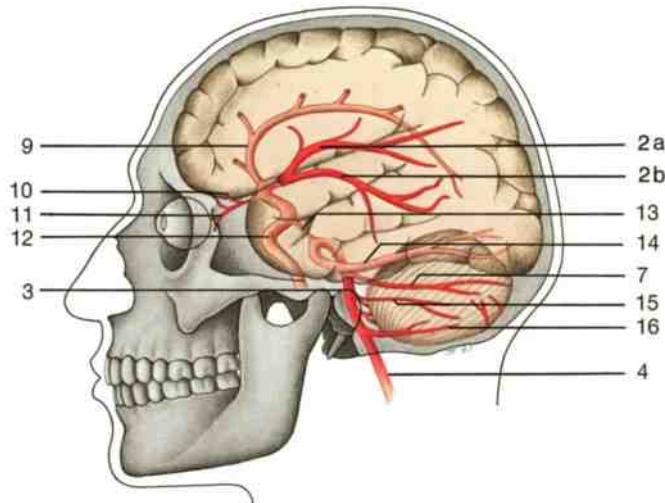

Arteries of the brain (inferior aspect). Right temporal lobe and cerebellum partly removed. Note the arterial circle of Willis around the infundibulum.

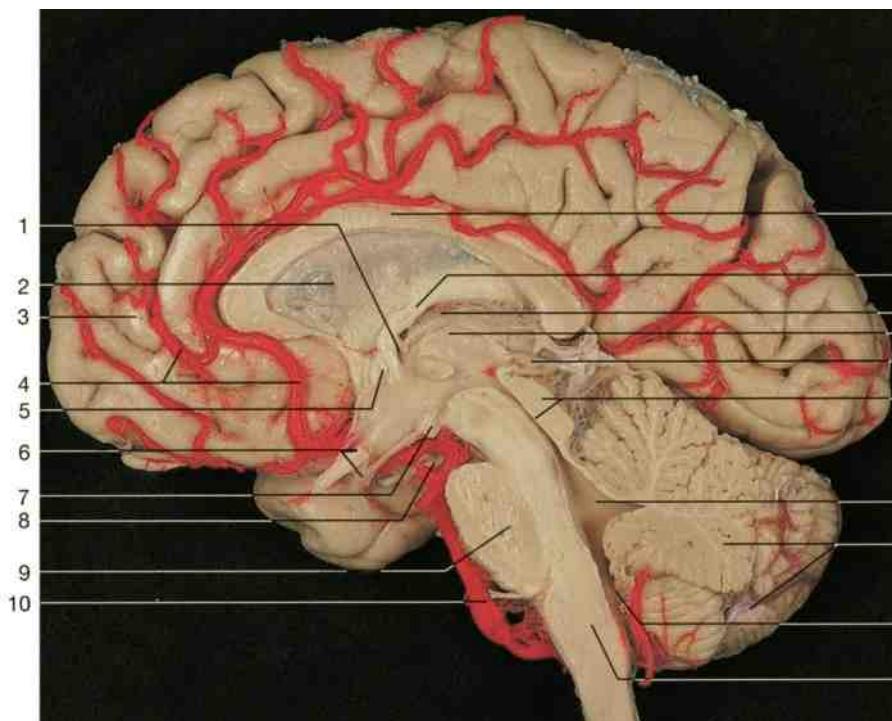

- 1 Insula
- 2 Middle cerebral artery (2 branches:
 - a Parietal branches,
 - b Temporal branches)
- 3 Basilar artery
- 4 Vertebral artery
- 5 Central sulcus
- 6 Occipital lobe
- 7 Superior cerebellar artery
- 8 Cerebellum
- 9 Anterior cerebral artery
- 10 Ethmoidal arteries
- 11 Ophthalmic artery
- 12 Internal carotid artery
- 13 Posterior communicating artery
- 14 Posterior cerebral artery
- 15 Anterior inferior cerebellar artery
- 16 Posterior inferior cerebellar artery

Cerebral arteries. Lateral aspect of the left hemisphere. The upper part of the temporal lobe has been removed to display the insula and cerebral arteries.

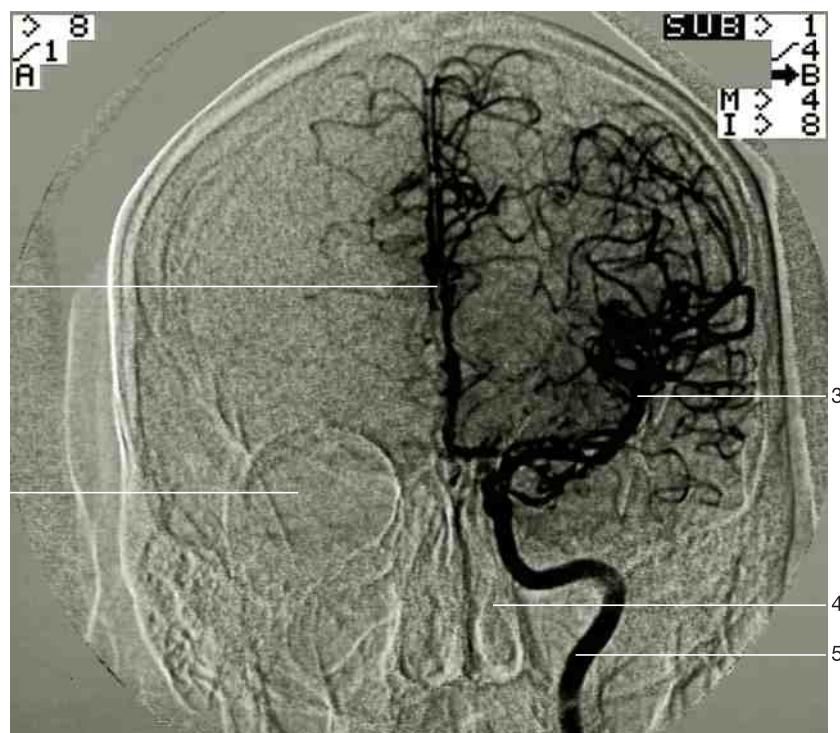

▷ Arteries of the brain.

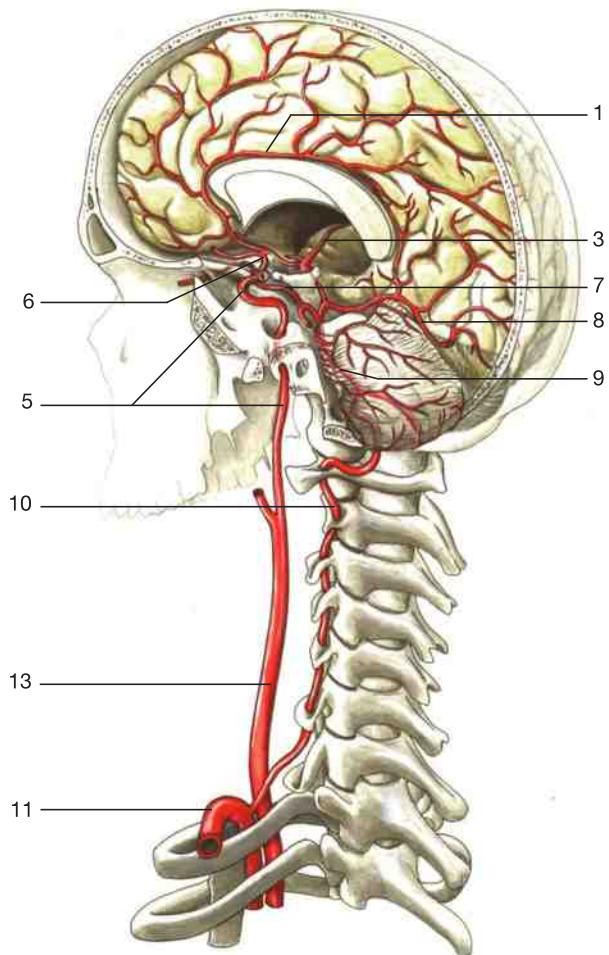

- 1 Interventricular foramen
- 2 Septum pellucidum
- 3 Frontal lobe
- 4 Anterior cerebral artery
- 5 Anterior commissure
- 6 Optic chiasma and infundibulum
- 7 Mamillary body
- 8 Oculomotor nerve (n. III)
- 9 Pons
- 10 Basilar artery
- 11 Corpus callosum
- 12 Fornix
- 13 Choroid plexus
- 14 Third ventricle
- 15 Pineal body
- 16 Tectum and cerebral aqueduct
- 17 Fourth ventricle
- 18 Cerebellum (arbor vitae, vermis)
- 19 Median aperture of Magendie
- 20 Medulla oblongata

Median section through the brain and brain stem. Cerebral arteries injected with red resin.

- 1 Anterior cerebral artery
- 2 Orbit
- 3 Middle cerebral artery
- 4 Nasal cavity
- 5 Internal carotid artery
- 6 Arterial circle of Willis
- 7 Posterior communicating artery
- 8 Posterior cerebral artery
- 9 Basilar artery
- 10 Vertebral artery
- 11 Subclavian artery
- 12 Aortic arch
- 13 Common carotid artery

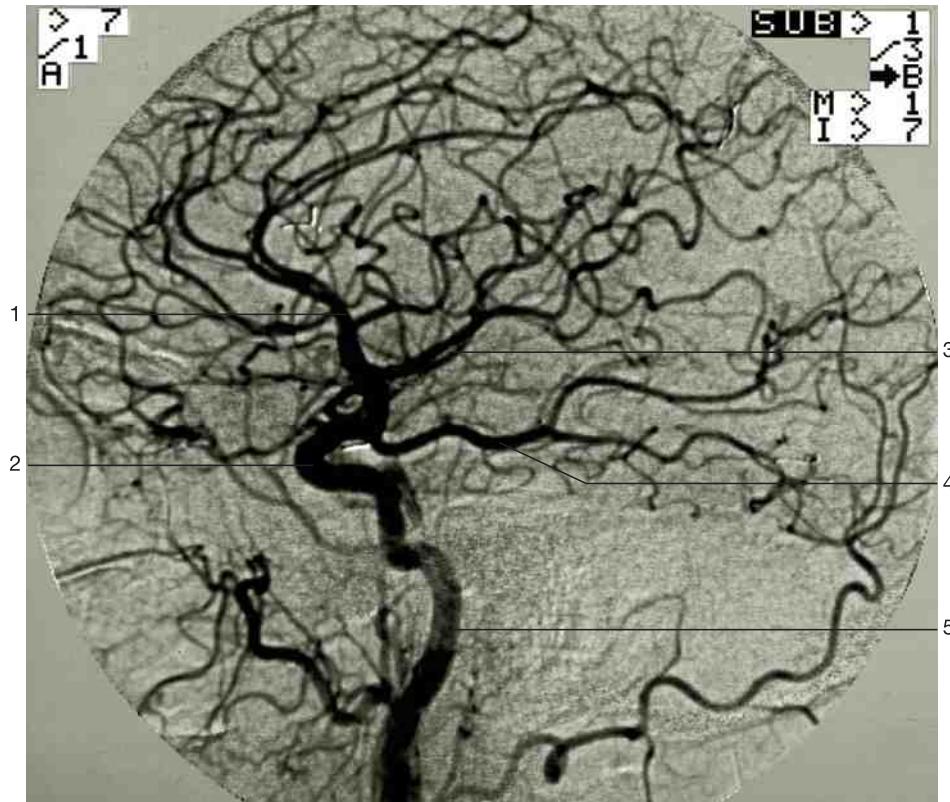

Arteries of the brain. Angiogram of the internal carotid artery (anterior aspect)
(courtesy of Prof. Dr. W. Huk, University of Erlangen-Nürnberg).

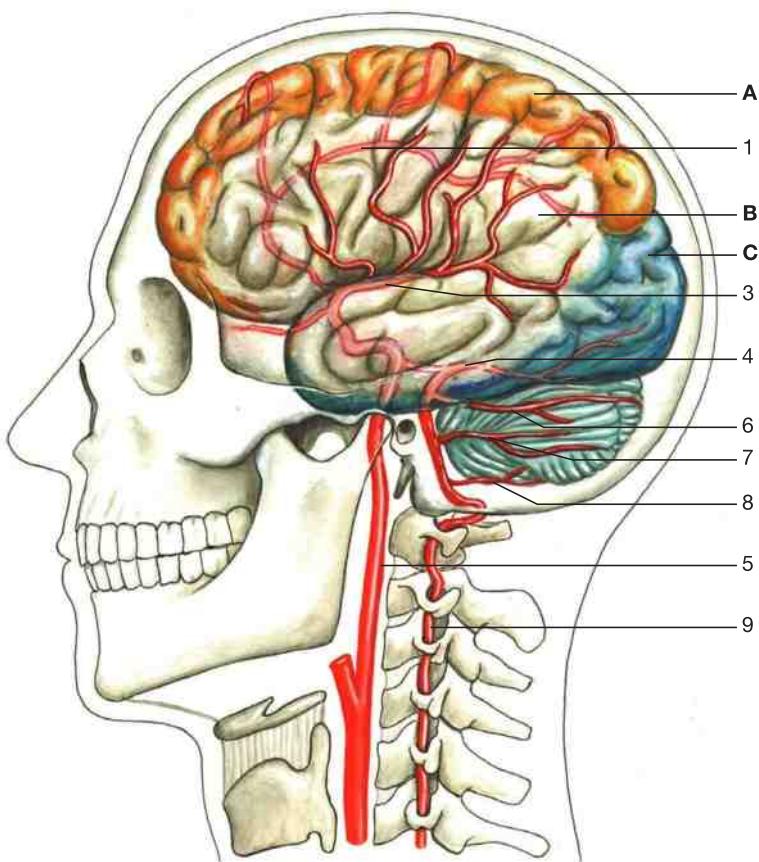

Cerebral arteries (schematic drawing).
Left hemisphere and brain stem have been removed.
Note the arterial circle of Willis around the sella turcica.

Main arteries for brain supply (MRI angiograph, anterior aspect, courtesy of Prof. Dr. W. Bautz, University of Erlangen-Nürnberg).

Arteries of the brain. Angiogram of the internal carotid artery (lateral aspect)
(courtesy of Prof. Dr. W. Huk, University of Erlangen-Nürnberg).

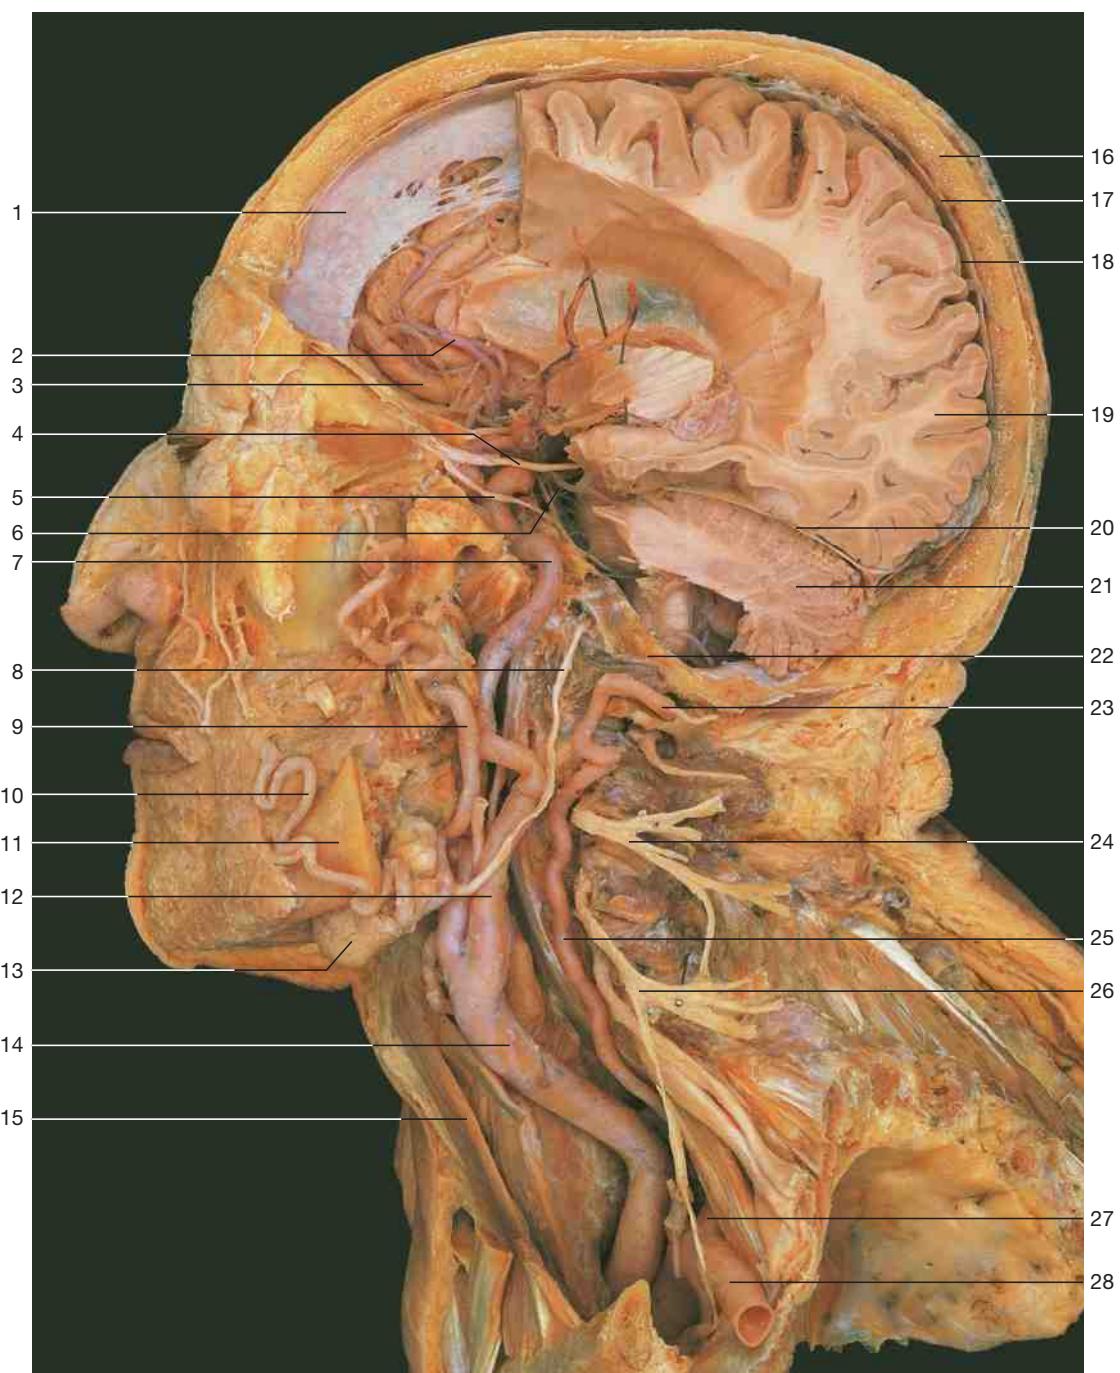

Cerebral arteries. The areas supplied by the main arteries are indicated by different colors (lateral aspect).

- 1 Anterior cerebral artery
- 2 Loop of the internal carotid artery
- 3 Middle cerebral artery
- 4 Posterior cerebral artery
- 5 Internal carotid artery
- 6 Superior cerebellar artery
- 7 Anterior inferior cerebellar artery
- 8 Posterior inferior cerebellar artery
- 9 Vertebral artery

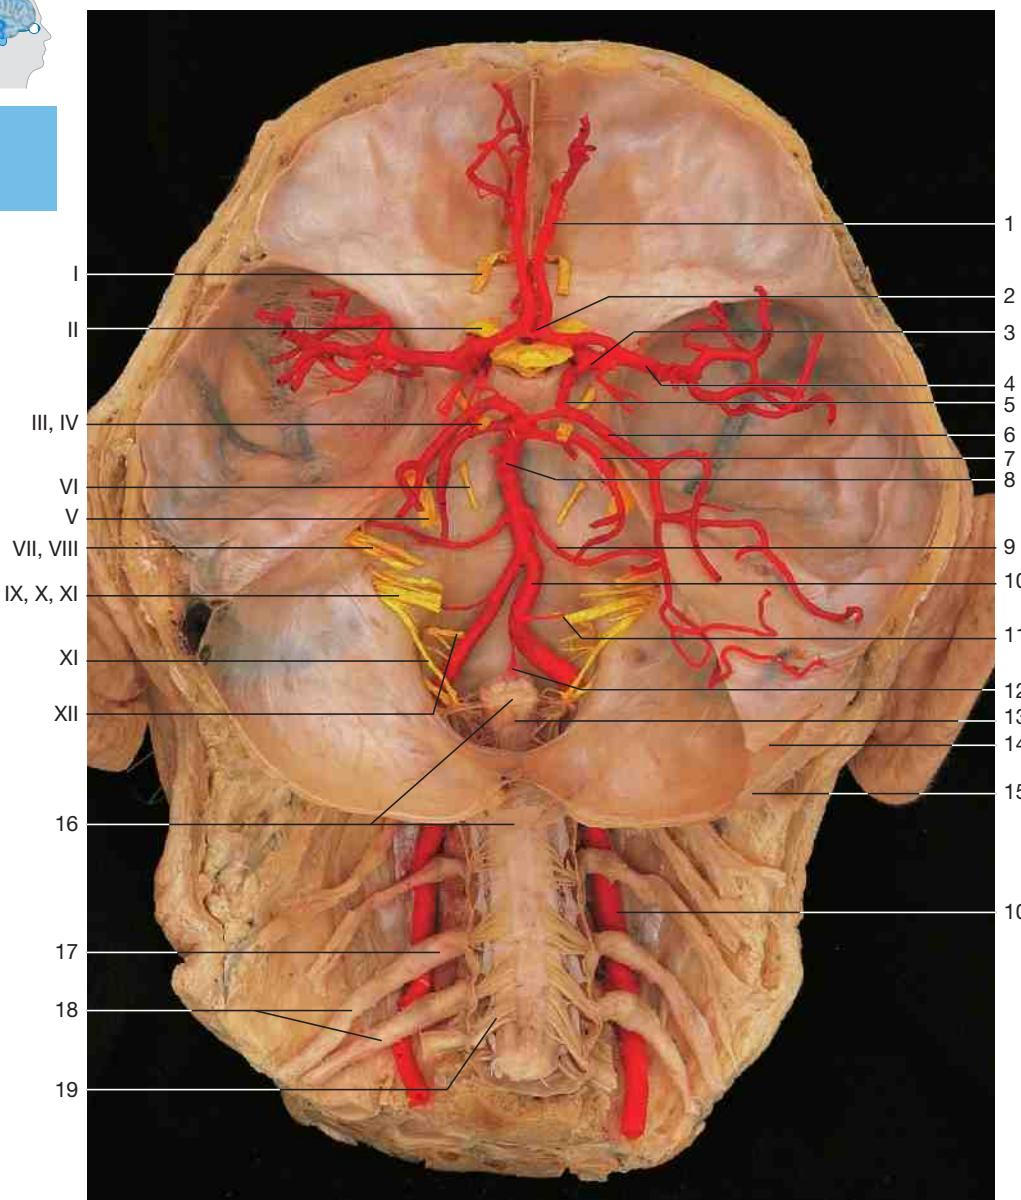

Areas of blood supply of the brain
(cerebellum = light blue).

- A = anterior cerebral artery (upper and medial parts of the cortex) (orange)
- B = middle cerebral artery (lateral areas of the frontal, parietal, and temporal lobes) (white)
- C = posterior cerebral artery (occipital lobe and inferior parts of the temporal lobe) (blue)

Dissection of the arteries of the brain and head (lateral aspect, superficial layers of facial region and left hemisphere and cerebellum partly removed).

- 6 Posterior horn of lateral ventricle
- 7 Uncus of parahippocampal gyrus
- 8 Body and crus of fornix
- 9 Parahippocampal gyrus
- 10 Pes hippocampi
- 11 Dentate gyrus
- 12 Hippocampal fimbria
- 13 Lateral ventricle

Dissection of the brain IVb. Depicted is the portion of the brain removed from the specimen above. **Temporal lobe and limbic system** (superior aspect). Columns of fornix are cut.

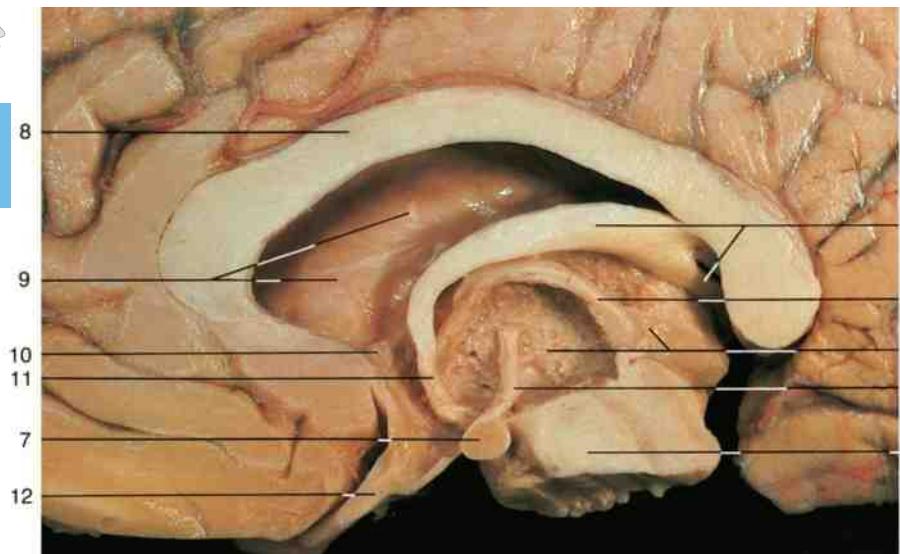

Dissection of the limbic system. Left side, lateral aspect. Corpus callosum has been cut in the median plane. The left thalamus and the left hemisphere have been partly removed.

- 17 Anterior commissure
- 18 Fornix
- 19 Longitudinal stria
- 20 Dentate gyrus
- 21 Hippocampal fimbria
- 22 Pes hippocampi

Dissection of the subcortical nuclei and internal capsule, left hemisphere (lateral aspect).

Frontal pole to the left. The lateral ventricle has been opened, and the insular gyri and claustrum have been removed, revealing the lentiform nucleus and the internal capsule.

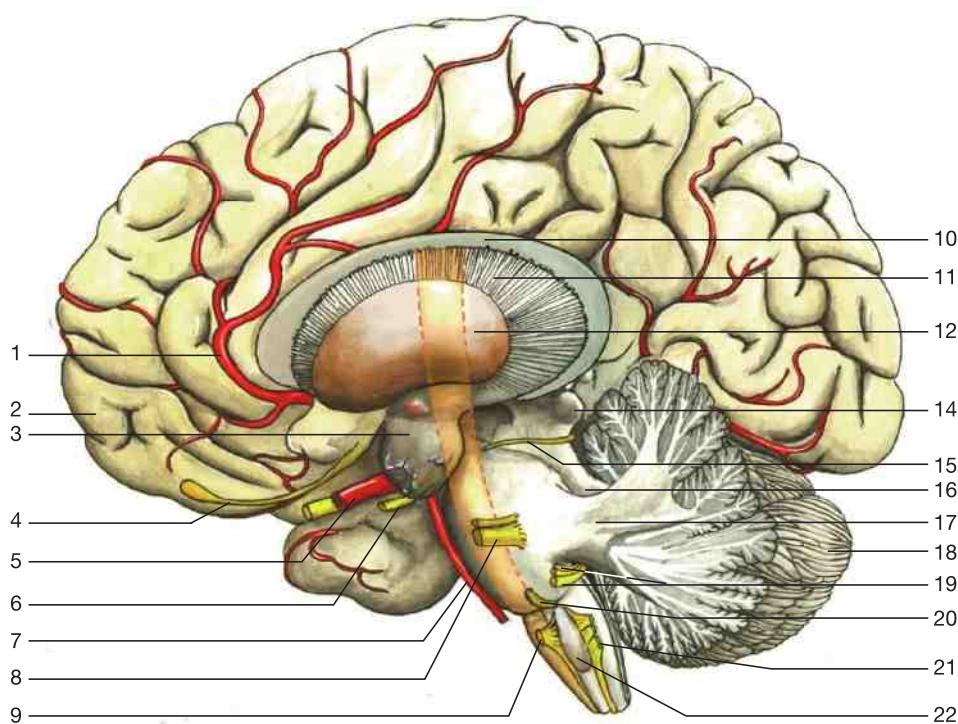

Dissection of the limbic system and the fornix (lateral aspect). Frontal pole to the left.

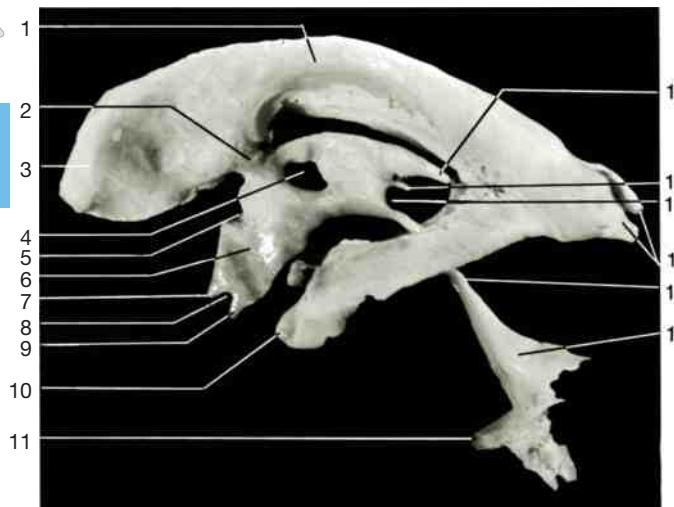

Right hemisphere together with brain stem and cerebellum (lateral aspect).
The connections of the brain stem with the cerebellum are dissected. The amygdala of the left hemisphere is shown. The corpus callosum has been partly removed.

- 1 Anterior cerebral artery
- 2 Frontal lobe
- 3 Amygdala (amygdaloid body)
- 4 Olfactory tract
- 5 Internal carotid artery
- 6 Oculomotor nerve (n. III)
- 7 Basilar artery

- 20 Abducent nerve (n. VI)
- 21 Glossopharyngeal nerve (n. IX), vagus nerve (n. X), and accessory nerve (n. XI)
- 22 Inferior olive

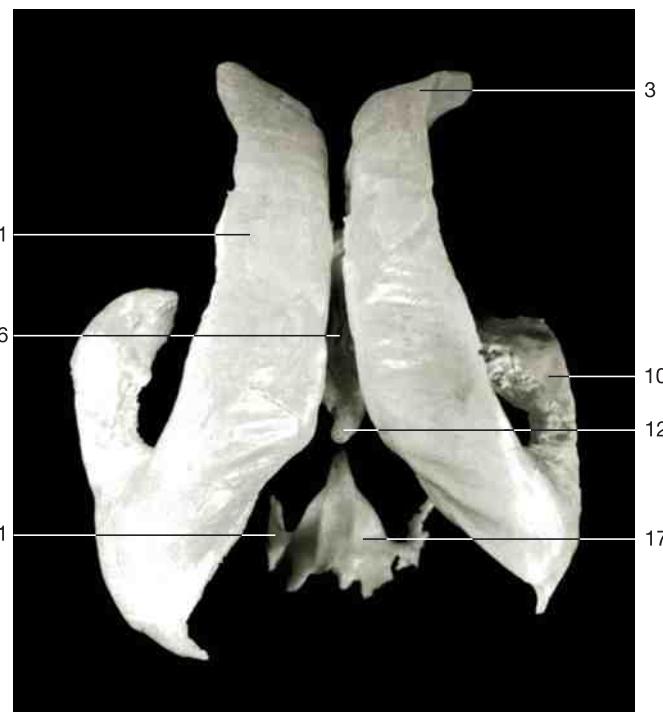

Schematic drawing of the dissected brain shown above (lateral aspect).
The course of the pyramidal tracts is indicated in red. Cranial nerves = yellow.

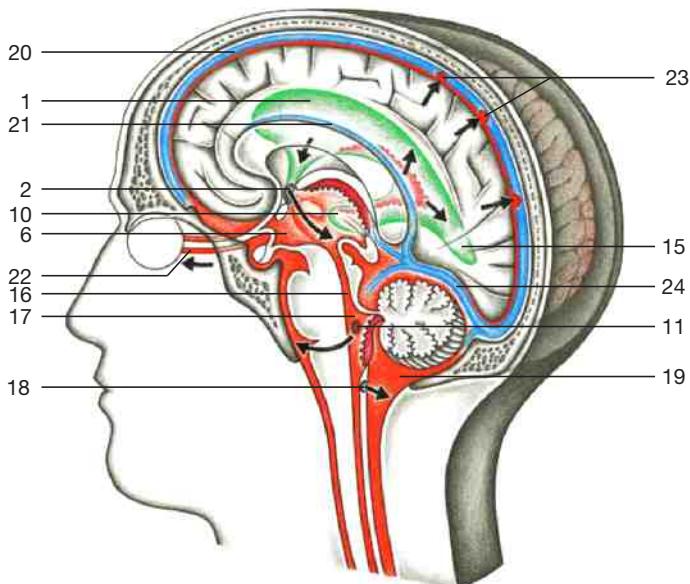

Cast of ventricular cavities of the brain (lateral aspect), frontal pole to the left.

- 1 Central part of the lateral ventricle
 - 2 Interventricular foramen of Monro
 - 3 Anterior horn of the lateral ventricle
 - 4 Site of interthalamic adhesion
 - 5 Notch for anterior commissure
 - 6 Third ventricle
 - 7 Optic recess
 - 8 Notch for optic chiasma
 - 9 Infundibular recess
 - 10 Inferior horn of lateral ventricle with indentation of amygdaloid body
 - 11 Lateral recess and lateral aperture of Luschka
 - 12 Suprapineal recess
 - 13 Pineal recess
 - 14 Notch for posterior commissure
 - 15 Posterior horn of lateral ventricle
 - 16 Cerebral aqueduct

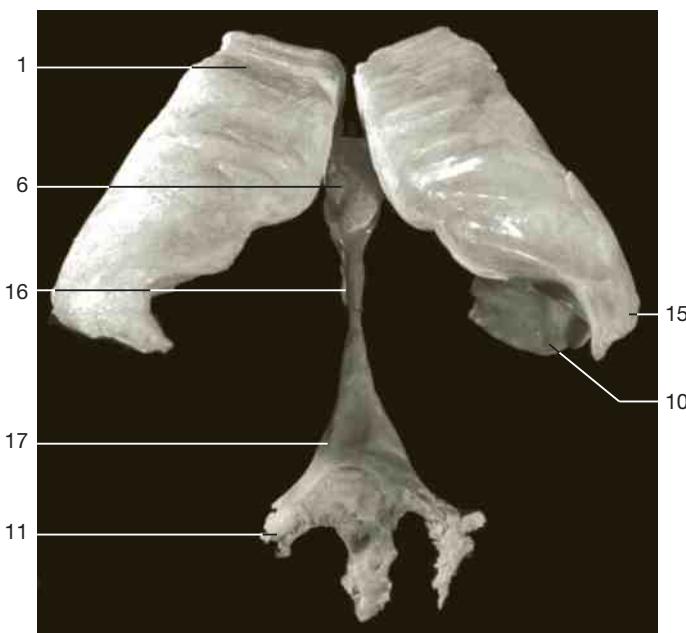

Cast of ventricular cavities of the brain (superior aspect), frontal pole at top.

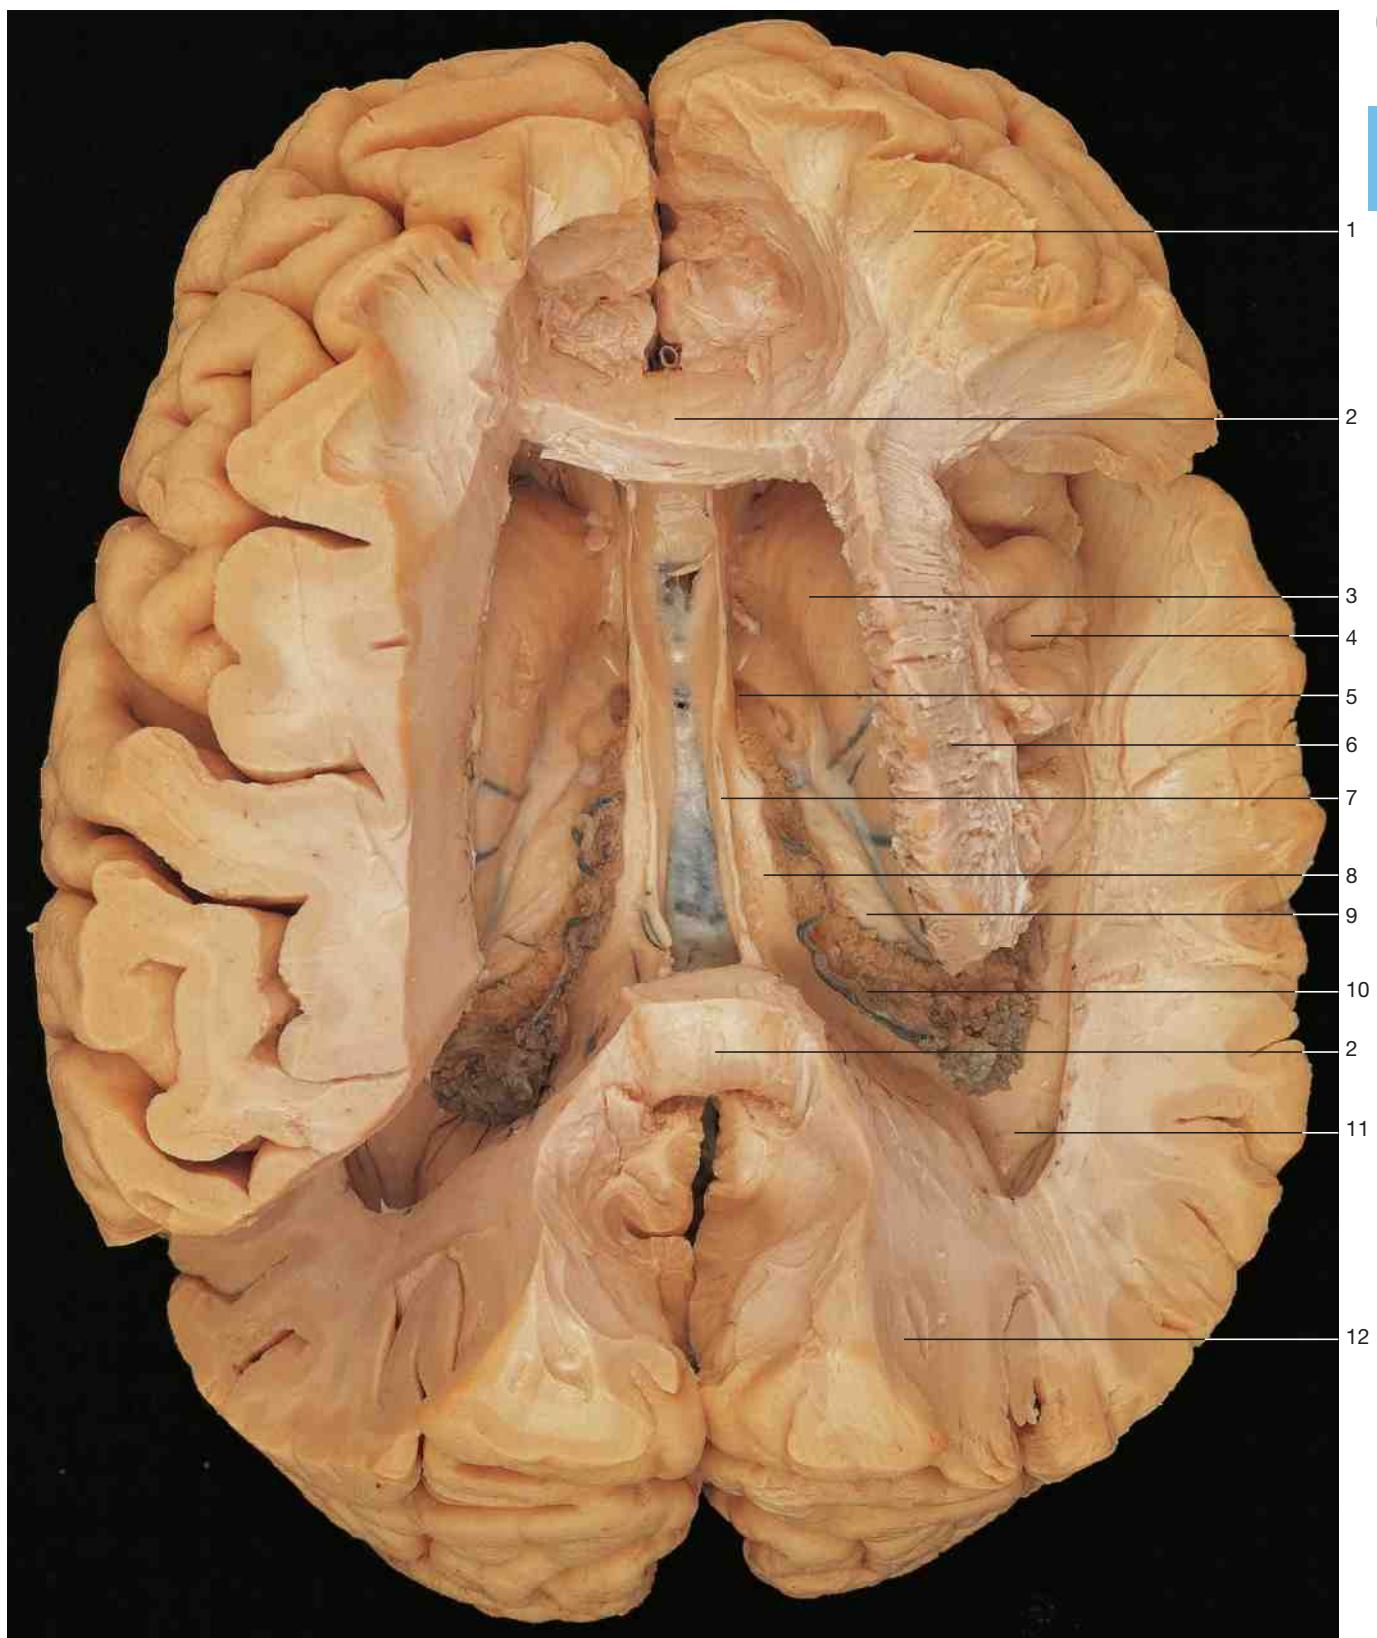

- 17 Fourth ventricle
 - 18 Median aperture of Magendie
 - 19 Cerebellomedullary cistern
 - 20 Superior sagittal sinus
 - 21 Inferior sagittal sinus
 - 22 Intervaginal space of optic nerve
 - 23 Arachnoid granulations of Pacchioni
 - 24 Straight sinus

Position of ventricular cavities (schematic drawing). The direction of flow of cerebrospinal fluid is indicated by arrows. Green = right lateral ventricle; red = choroidal plexus with cerebrospinal fluid.

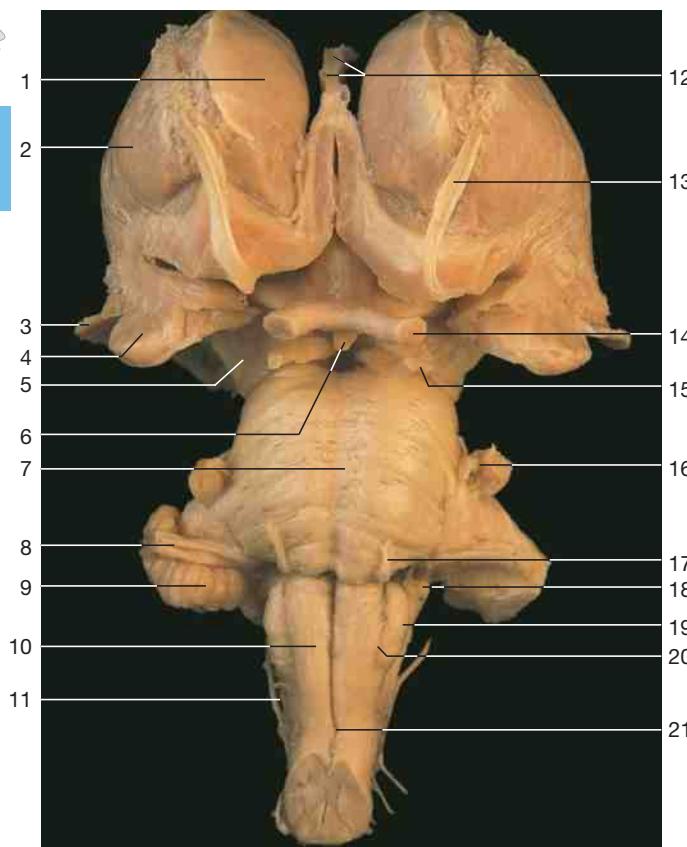

Cast of ventricular cavities of the brain (posterior aspect).

Dissection of the brain (superior view of the lateral ventricle and of the subcortical nuclei of the brain). Corpus callosum partly removed. Fornix and choroid plexus of the left lateral ventricle are shown.

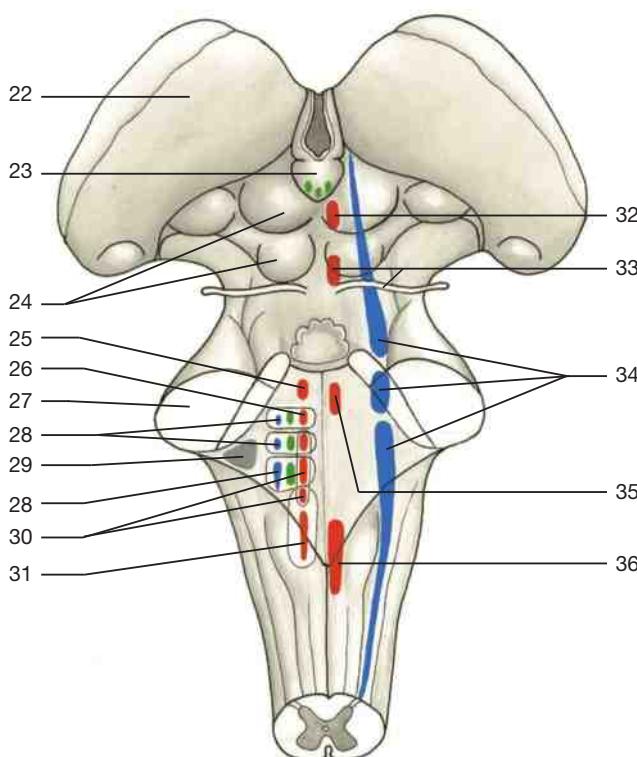

- 1 Frontal lobe of brain
- 2 Corpus callosum
- 3 Caudate nucleus (head)
- 4 Insular cortex
- 5 Interventricular foramen
- 6 Internal capsule

- 7 Lateral longitudinal stria
- 8 Body of fornix
- 9 Thalamus
- 10 Choroid plexus
- 11 Lateral ventricle (occipital horn)
- 12 Occipital lobe of brain

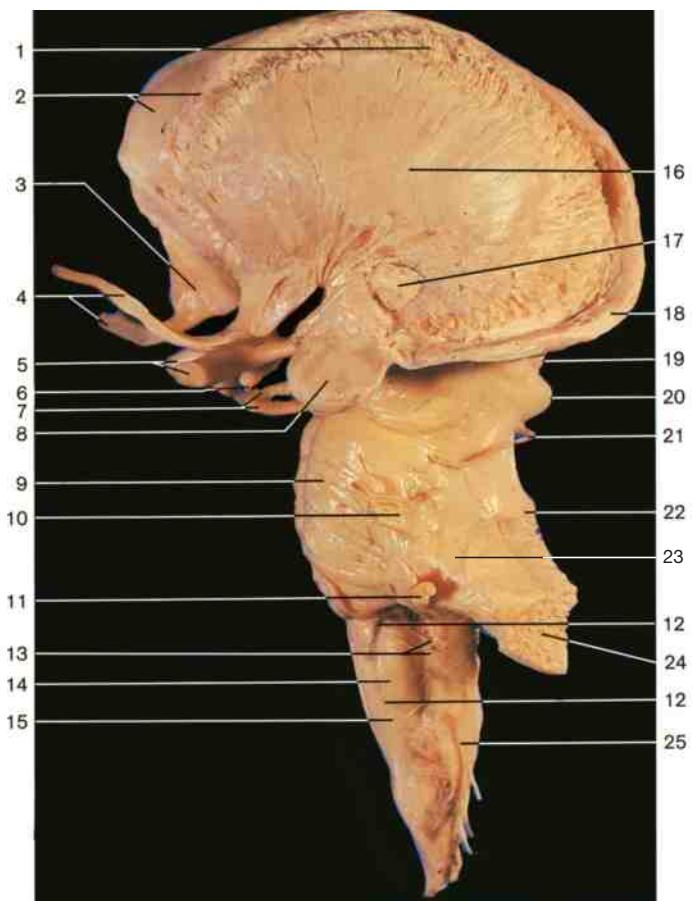

Brain stem (ventral aspect).

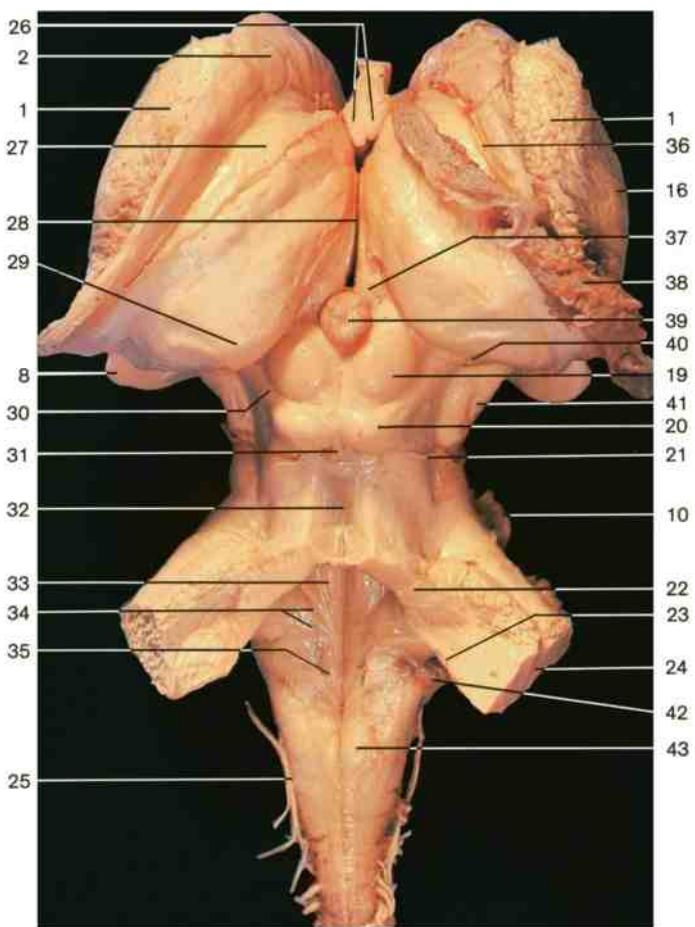

- 1 Caudate nucleus
- 2 Lentiform nucleus
- 3 Caudal extremity of caudate nucleus
- 4 Amygdaloid body
- 5 Cerebral peduncle
- 6 Infundibulum
- 7 Pons
- 8 Facial nerve (n. VII) and vestibulocochlear nerve (n. VIII)
- 9 Cerebellar flocculus
- 10 Medulla oblongata
- 11 Accessory nerve (n. XI)
- 12 Fornix and column of fornix
- 13 Olfactory tract
- 14 Optic nerve (n. II)
- 15 Oculomotor nerve (n. III)
- 16 Trigeminal nerve (n. V)
- 17 Abducent nerve (n. VI)
- 18 Glossopharyngeal nerve (n. IX) and vagus nerve (n. X)
- 19 Inferior olive
- 20 Hypoglossal nerve (n. XII)
- 21 Decussation of the pyramids
- 22 Thalamus
- 23 Epiphysis
- 24 Tectum of midbrain (superior and inferior colliculus)
- 25 Motor nucleus of trigeminal nerve (n. V)
- 26 Facial nucleus (n. VII)
- 27 Middle cerebellar peduncle
- 28 Visceral nucleus of glossopharyngeal and vagus nerves (n. IX and n. X), salivatory nucleus
- 29 Vestibular nucleus (n. VIII)
- 30 Ambiguous nucleus (n. IX, n. X, n. XI)
- 31 Spinal nucleus of accessory nerve (n. XI)
- 32 Motor nucleus of oculomotor nerve (n. III)
- 33 Trochlear nucleus and nerve (n. IV)
- 34 Sensory nucleus of trigeminal nerve (n. V)
- 35 Abducent nucleus (n. VI)
- 36 Hypoglossal nucleus (n. XII)

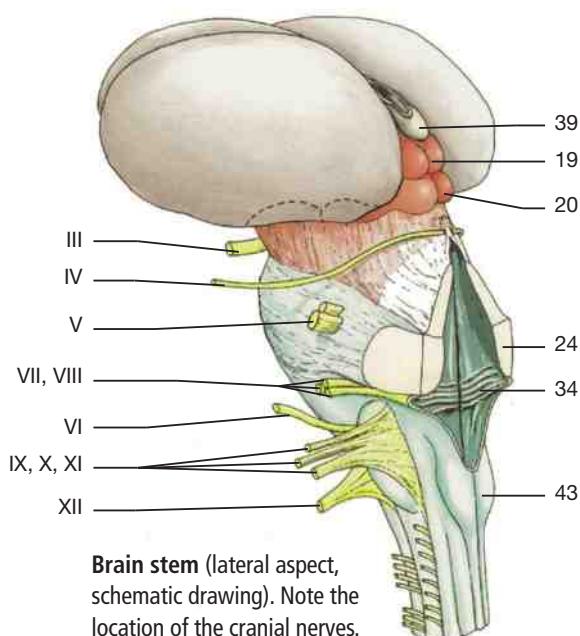

Brain stem (dorsal aspect, schematic drawing).
Location of cranial nerve nuclei.

Brain stem (left lateral aspect). Cerebellar peduncles have been severed, cerebellum and cerebral cortex have been removed.

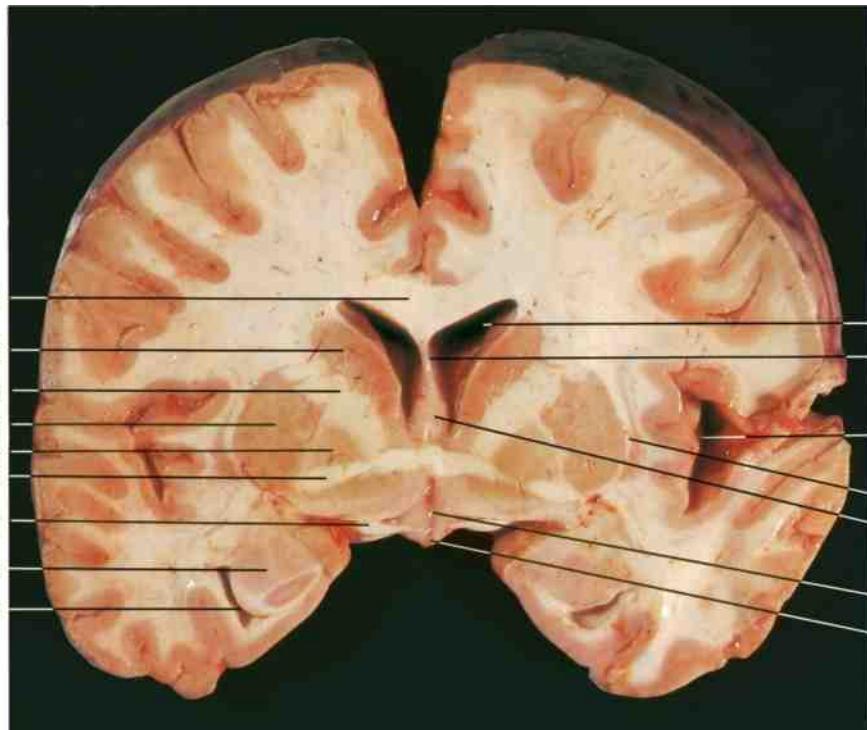

Brain stem (dorsal aspect). Cerebellum removed.

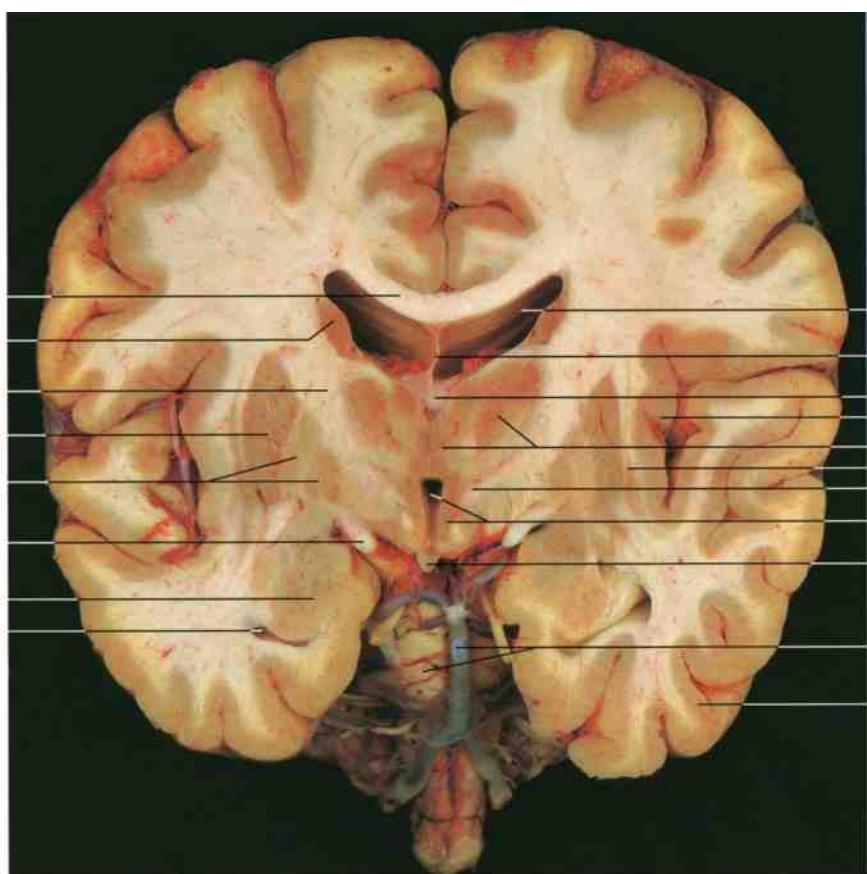

Brain stem (lateral aspect, schematic drawing). Note the location of the cranial nerves.
III–XII = cranial nerves.

- 1 Internal capsule

Horizontal section through the head. (CT scan.) Section 3.

Sagittal section through the head.
Levels of the horizontal sections are indicated.

Longitudinal section through the right temporal bone. The outer and middle ear and auditory ossicles and tube are shown (anterior aspect).

Right auditory and vestibular apparatus (anterior aspect).
(Schematic drawing.)

Outer ear

- 1 Auricle
- 2 Lobule of auricle
- 3 Helix
- 4 Tragus
- 5 External acoustic meatus

Middle ear

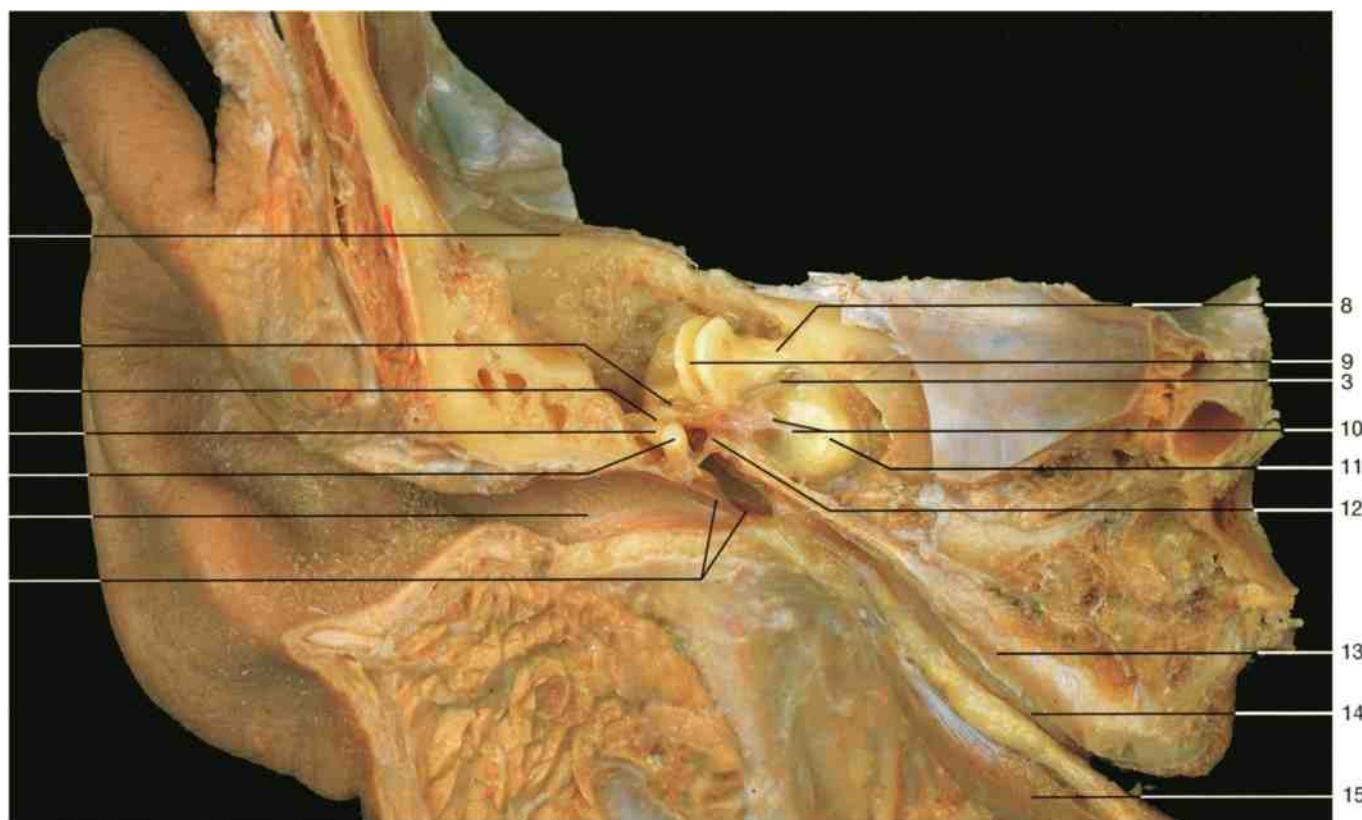

- 6 Tympanic membrane
- 7 Malleus
- 8 Incus
- 9 Stapes
- 10 Tympanic cavity
- 11 Mastoid process
- 12 Auditory tube
- 13 Tensor tympani muscle

Inner ear

- 14 Anterior semicircular duct
- 15 Posterior semicircular duct
- 16 Lateral semicircular duct
- 17 Cochlea
- 18 Vestibulocochlear nerve
- 19 Petrosal part of the temporal bone

Additional structures

- 20 Superior ligament of malleus
- 21 Arcuate eminence
- 22 Internal carotid artery
- 23 Anterior surface of pyramid with dura mater
- 24 Stapes
- 25 Levator veli palatini muscle

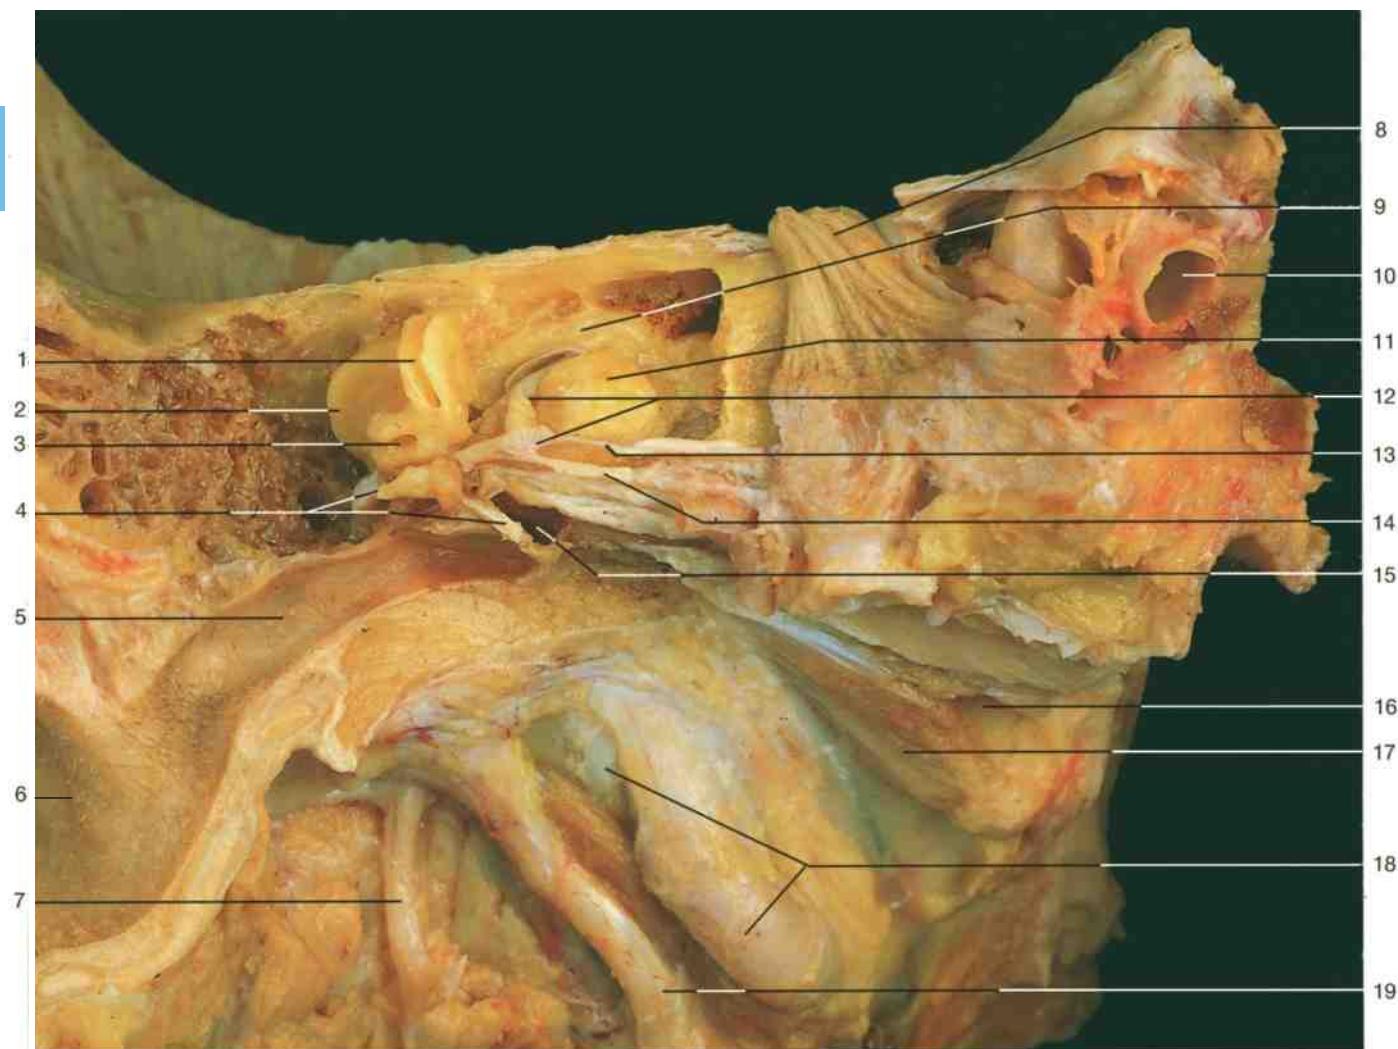

Longitudinal section through the right outer, middle, and inner ear. The cochlea and semicircular canals have been further dissected (anterior aspect).

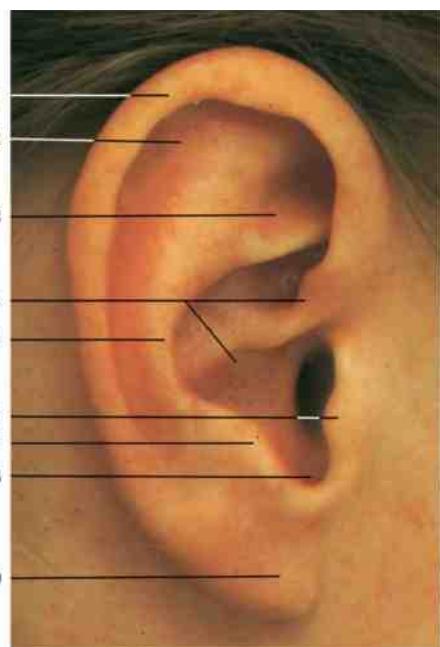

Internal acoustic meatus, left side. The bone was partly removed to show the bottom of the meatus.

- 1 Roof of tympanic cavity
- 2 Lateral osseous semicircular canal
- 3 Facial nerve
- 4 Incus
- 5 Malleus
- 6 External acoustic meatus
- 7 Tympanic cavity and tympanic membrane
- 8 Vestibulocochlear nerve
- 9 Anterior osseous semicircular canal
- 10 Geniculate ganglion and greater petrosal nerve
- 11 Cochlea
- 12 Stapes
- 13 Tensor tympani muscle
- 14 Auditory tube
- 15 Levator veli palatini muscle
- 16 Area of facial nerve
- 17 Superior vestibular area
- 18 Transverse crest
- 19 Foramen singulare
- 20 Foraminous spiral tract (outlet of cochlear part of vestibulocochlear nerve)
- 21 Base of cochlea

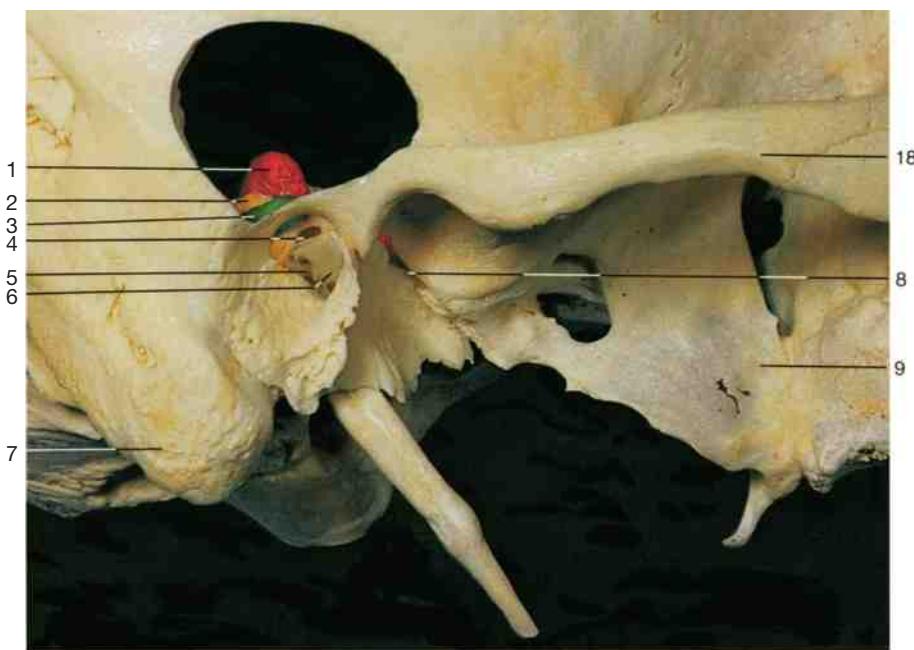

Longitudinal section through the outer, middle, and inner ear. Deeper dissection to display facial nerve and lesser and greater petrosal nerves (anterior aspect).

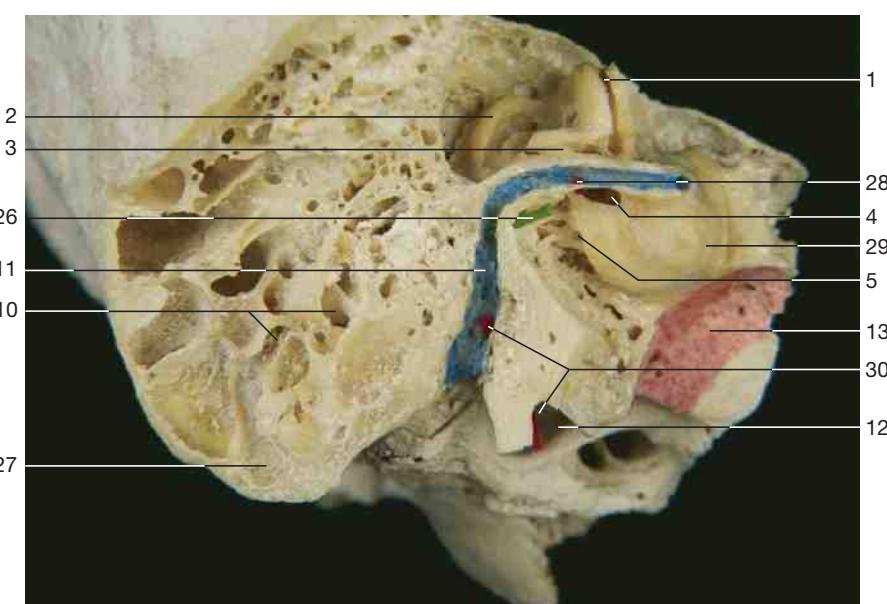

Right auricle (lateral aspect).

Horizontal section through the head at the level of optic chiasma and striate cortex (superior aspect). Note the relationship of hypothalamic infundibulum to optic chiasma.

Horizontal section through the human head (MRI scan, courtesy of Prof. W. J. Huk, Erlangen, Germany).
Arrows = branches of arterial circle of Willis.

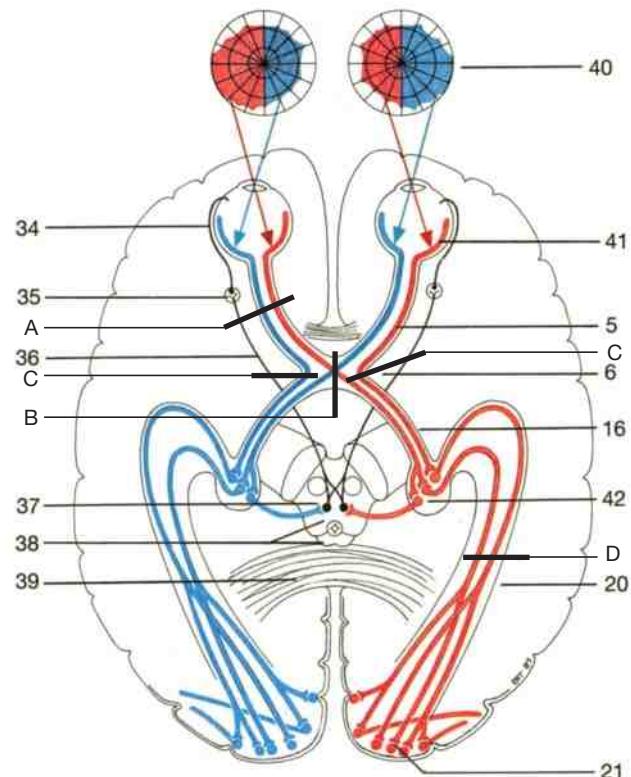

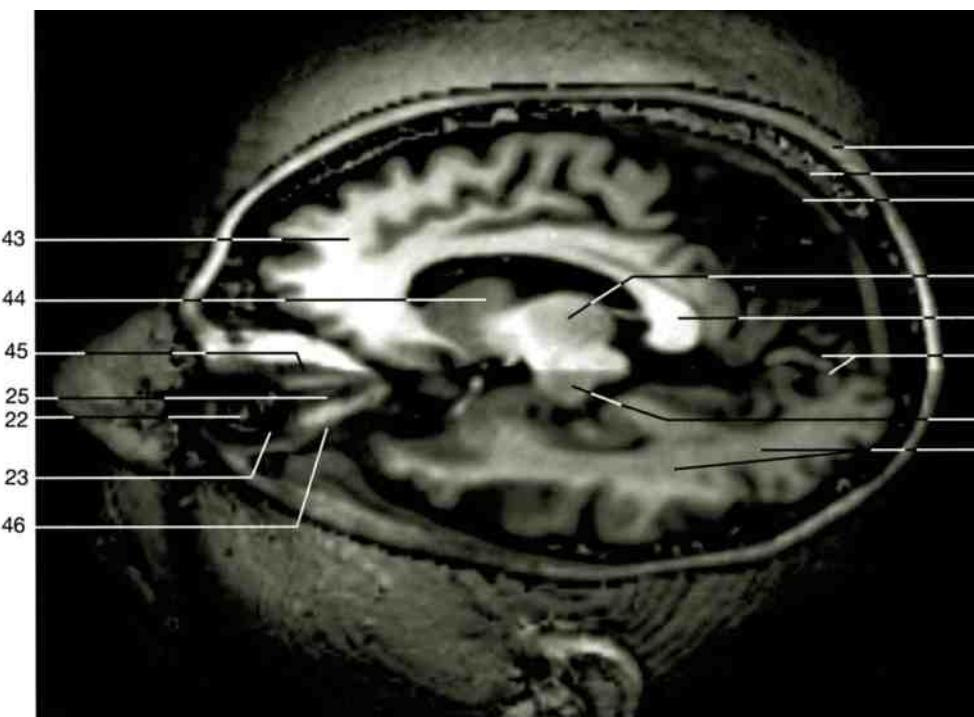

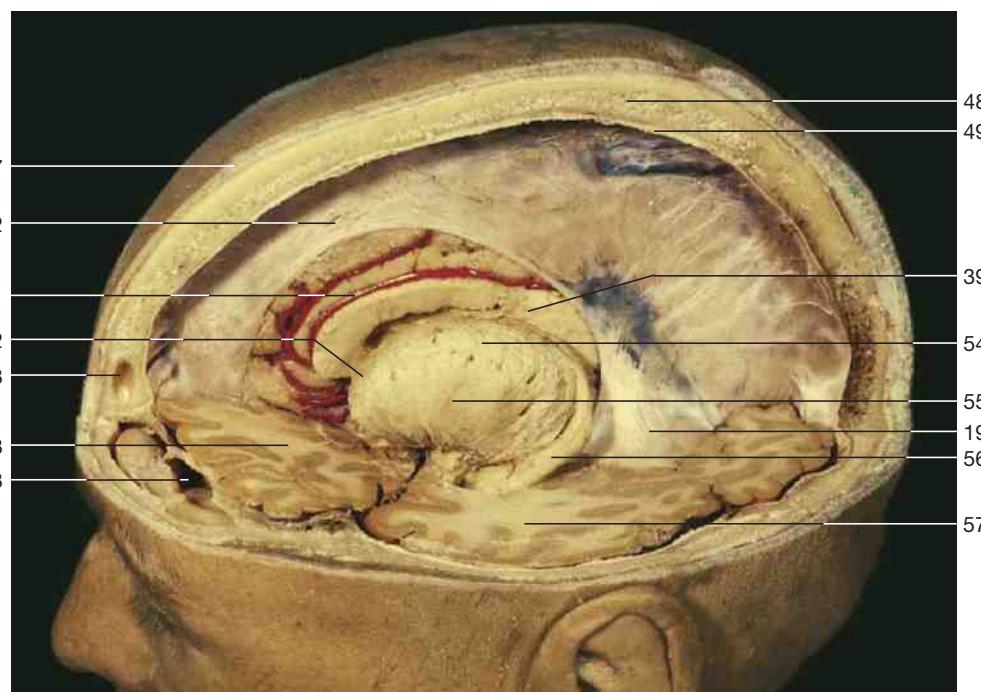

Diagram of the visual pathway and path of the light reflex.

3-D reconstruction of the human visual system (MRI scan flash 40°, courtesy of Prof. Huk, University of Erlangen, Germany).

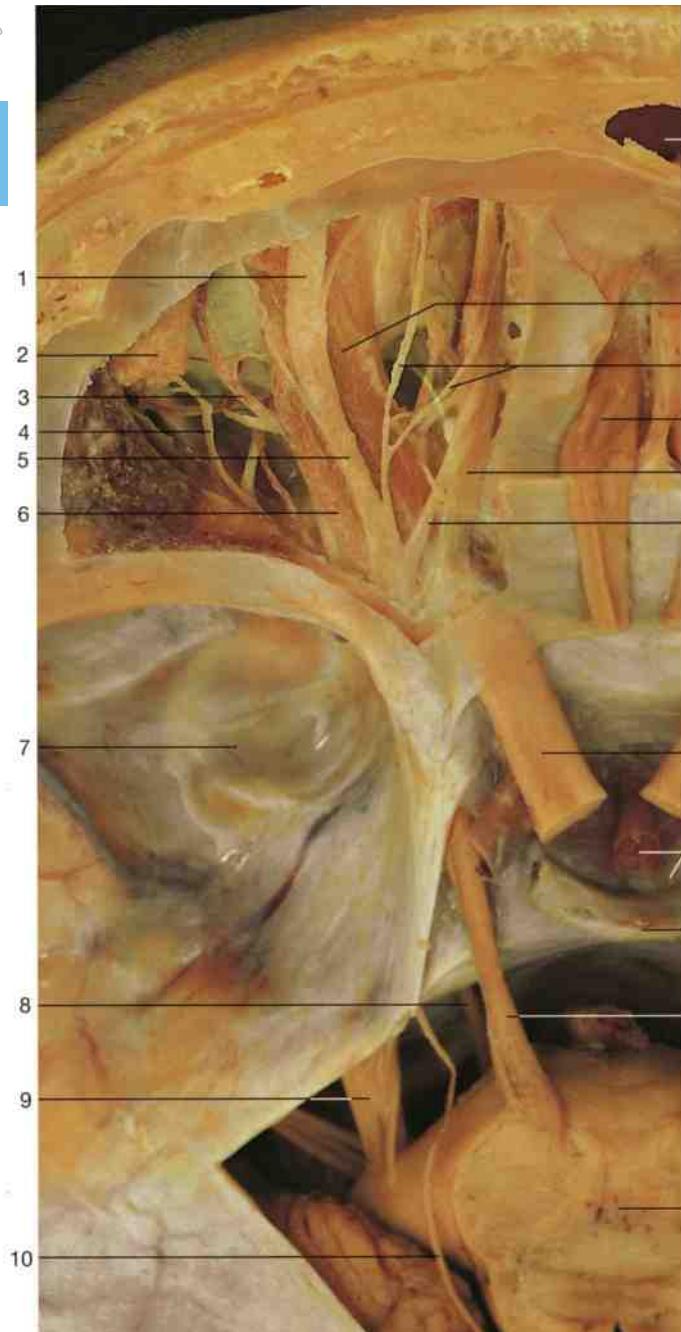

Dissection of brain stem *in situ*. Left hemisphere has been partly removed (compare with MRI scan above).

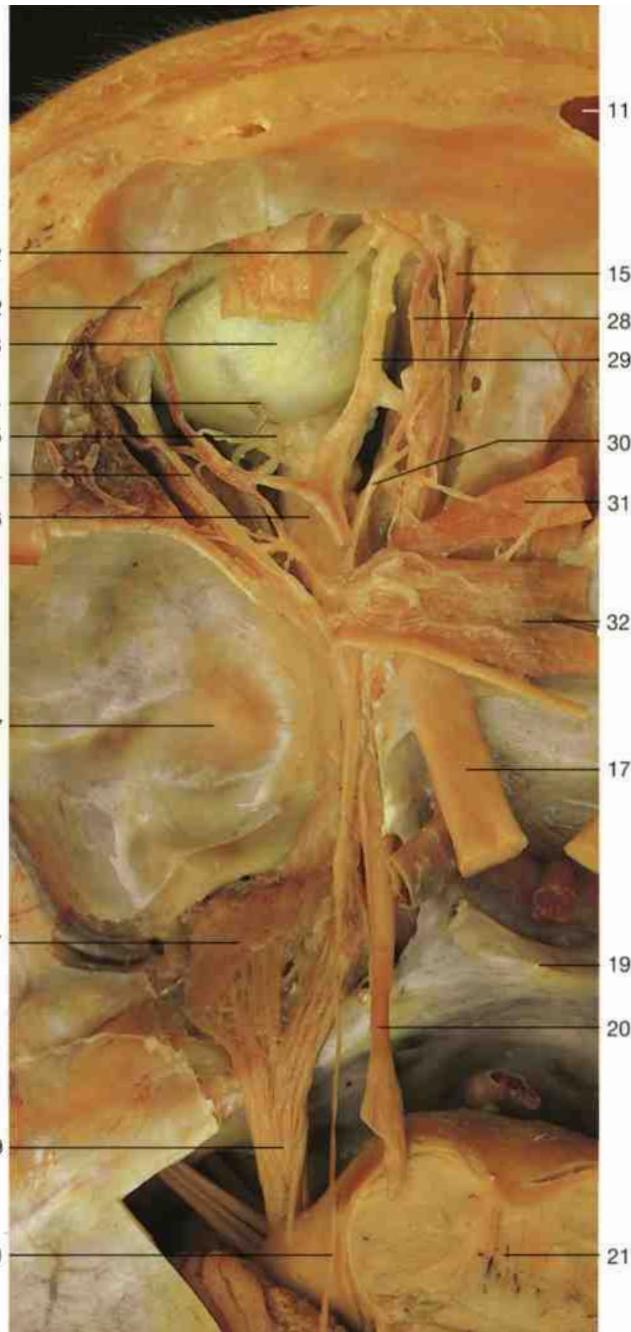

In **binocular vision** the visual field (40) is projected upon portions of both retinae (blue and red in the drawing). In the chiasma the fibers from the two retinal portions are combined to form the left optic tract. The fibers of the two eyes remain separated from each other throughout the entire visual pathway up to their final termination in the calcarine cortex (21). **Injuries on the optic pathway** produce visual defects whose nature depends on the location of the injury. Destruction of one optic nerve (A) produces **blindness in the corresponding eye** with loss of pupillary

light reflex. If **lesions of the chiasma** destroy the crossing fibers of the nasal portions of the retina (B), both temporal fields of vision are lost (**bitemporal hemianopsia**). If both lateral angles of the chiasma are compressed (C), the nondecussating fibers from the temporal retinae are affected, resulting in loss of nasal visual fields (**binasal hemianopsia**). Lesions posterior to the chiasma (D) (i.e., optic tract, lateral geniculate body, optic radiation, or visual cortex) result in a loss of the entire opposite field of vision (**homonymous hemianopsia**).

2.4 Oral and Nasal Cavities

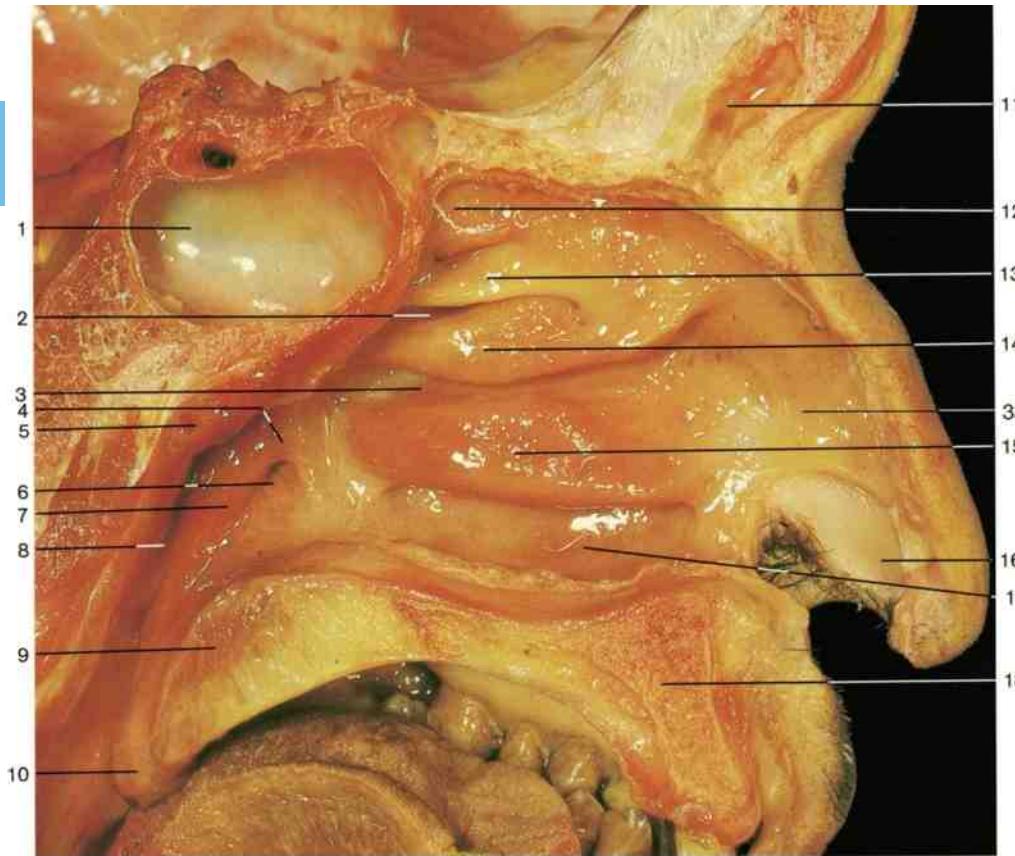

Median sagittal section through the head. The palate separates nasal and oral cavities. The base of the skull forms an angle of about 150° at the sella turcica (dotted line).

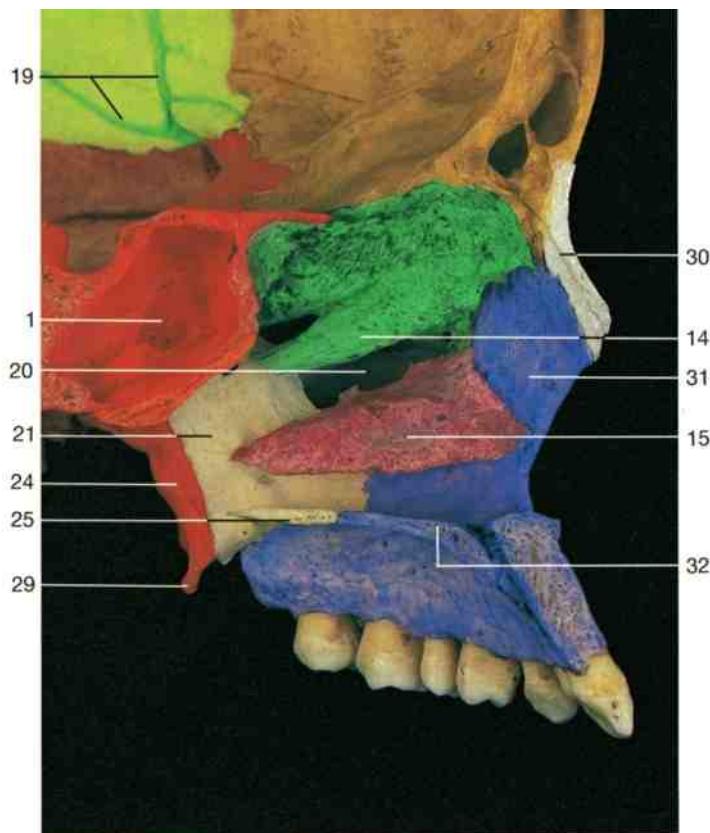

During evolution, the oral and nasal cavities of the human head were situated upon each other, so the human face developed in the frontal plane. The **nasal cavities** are separated by the nasal septum. They contain three conchae, where openings to the ethmoidal and maxillary sinus are located. Posteriorly the two nasal cavities open into the nasopharynx through the choanae. The **oral cavity** is separated from the nasal cavity by the palate. When the mouth is closed, the oral cavity is fully occupied by the tongue, which is characterized by its high mobility, necessary for the development of speech and song. Specific lymphatic organs (tonsils) are located at the entrance of the nasopharynx in both the nasal and oral cavities to protect the digestive tract from infection. The respiratory and digestory tracts cross each other within the nasopharynx, the most important requirement for the development of speech.

Median sagittal section through the head (schematic drawing). The tongue has been disposed to show the connection of the oral cavity with the pharynx and the position of the palatine tonsil.

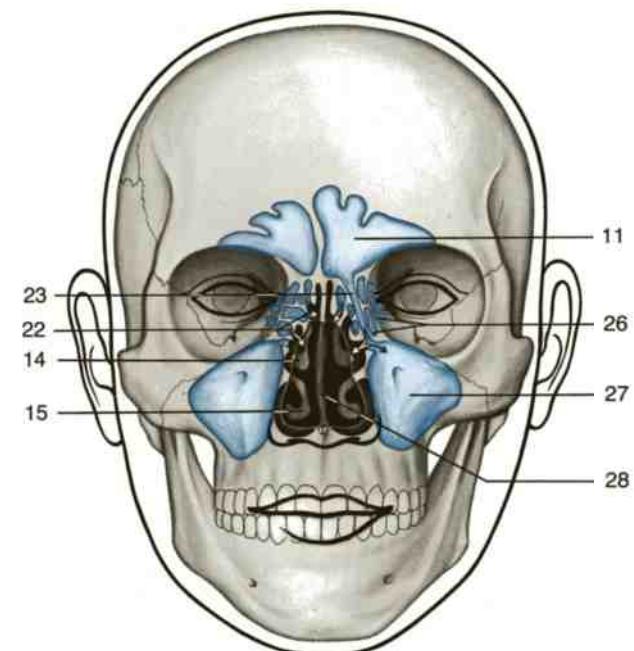

Lateral wall of the nasal cavity. Septum removed.

- 33 Parotid duct
- 34 Masseter muscle
- 35 Right and left sublingual papillae

Location of the major salivary glands in relation to the oral cavity.

2.5 Neck and Organs of the Neck

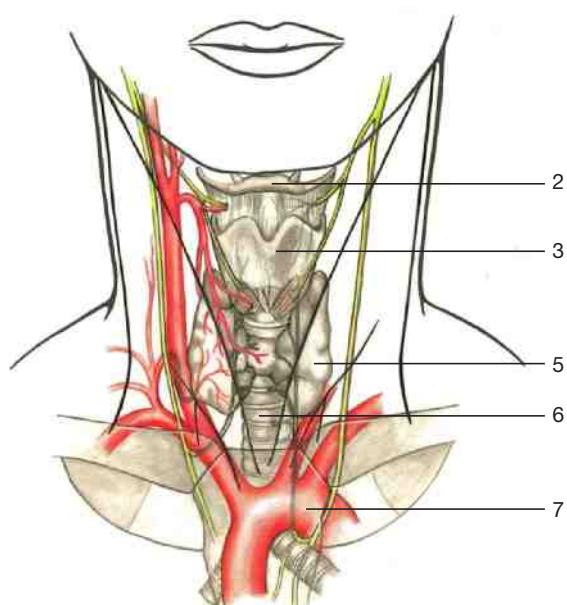

Regional anatomy of the neck (anterior aspect). The anteriorly located muscles and the thoracic wall have been removed.

The anterior aspect of the neck contains the trachea and larynx, which are connected to the nasal cavity via the pharynx. Behind the trachea lies the esophagus, which is connected to the oral cavity, again via the pharynx.

The thyroid gland is located anterior to the trachea, whereas the carotid artery and jugular vein together with the vagus nerve are situated laterally, conjoining the head with the thoracic organs and upper limb.

Underneath the sternocleidomastoid muscle, the cervical portion of the spinal nerves forms the cervical and brachial nervous plexuses that give rise to the innervations of neck and upper limb respectively.

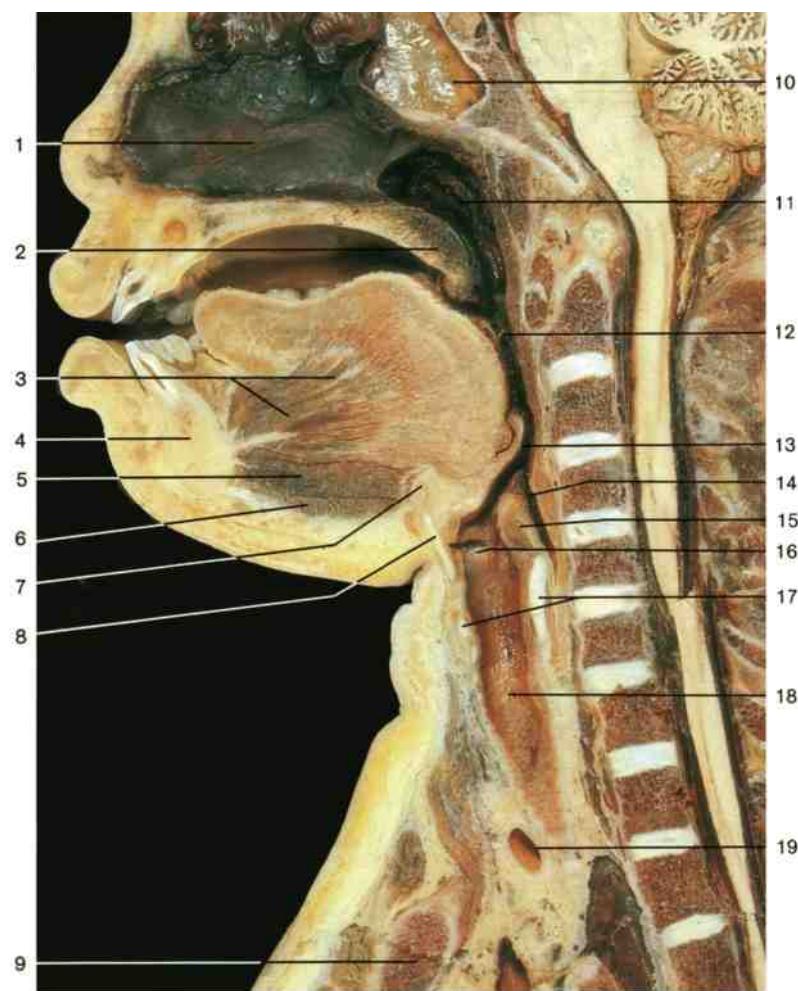

- 1 Submandibular gland
- 2 Hyoid bone
- 3 Larynx (thyroid cartilage)
- 4 Nerves and vessels of the neck
(carotid artery, internal jugular vein, and vagus nerve)
- 5 Thyroid gland
- 6 Trachea
- 7 Aortic arch

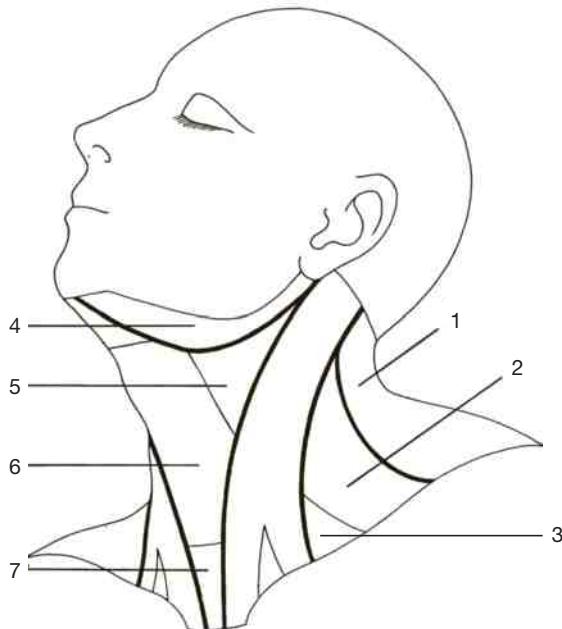

Organs of the neck (anterior aspect, schematic drawing). The main arterial trunks are indicated in red.

- 1 Nasal septum
- 2 Uvula
- 3 Genioglossus muscle
- 4 Mandible
- 5 Geniohyoid muscle
- 6 Mylohyoid muscle
- 7 Hyoid bone
- 8 Thyroid cartilage
- 9 Manubrium sterni
- 10 Sphenoidal sinus
- 11 Nasopharynx
- 12 Oropharynx
- 13 Epiglottis
- 14 Laryngopharynx
- 15 Arytenoid muscle
- 16 Vocal fold
- 17 Cricoid cartilage
- 18 Trachea
- 19 Left brachiocephalic vein
- 20 Thymus
- 21 Esophagus

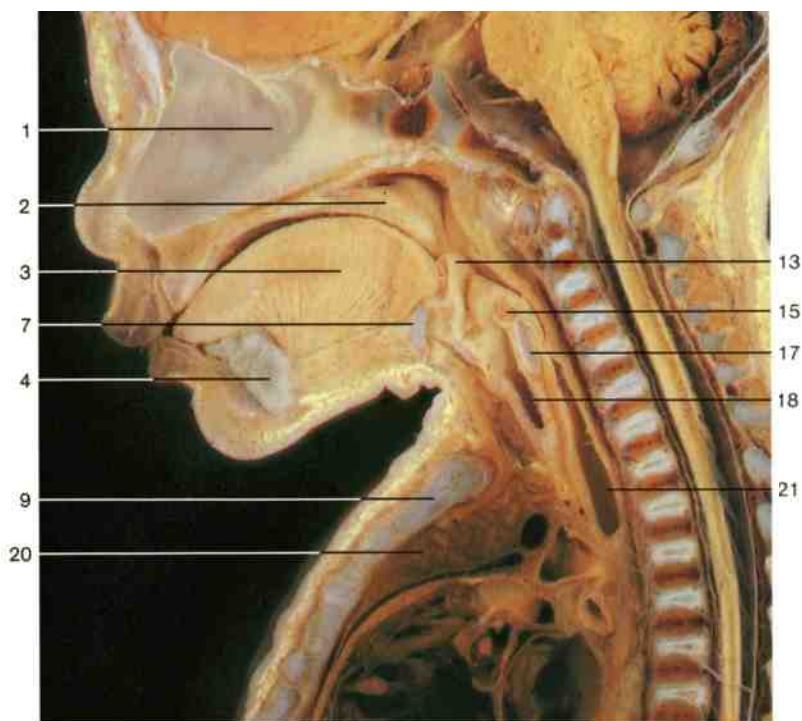

Median section through adult head and neck. Note the low position of the adult larynx when compared with that of the neonate (cf. with the figure below).

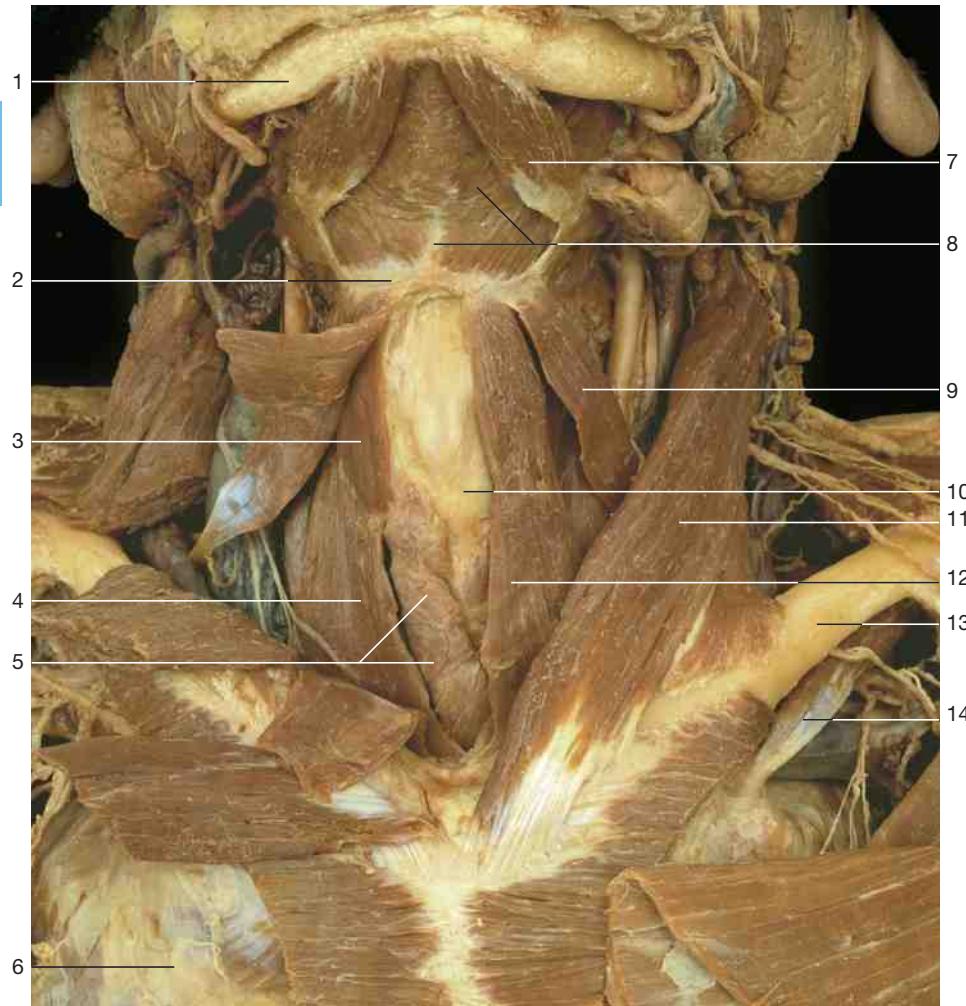

Regions and triangles of the neck
(schematic drawing).

- 1 Posterior cervical region
- 2 Lateral cervical region
- 3 Supraclavicular triangle
- 4 Submandibular triangle
- 5 Carotid triangle
- 6 Anterior cervical region
- 7 Jugular fossa

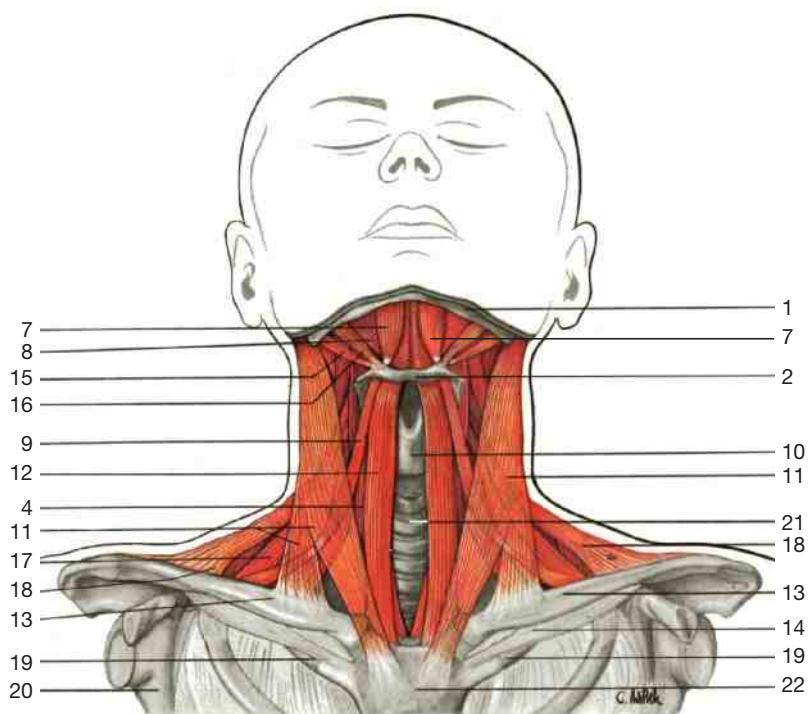

Median section through neonate head and neck. Note the high position of the larynx permitting the epiglottis to nearly reach the uvula (cf. with the figure above).

- 1 Mandible
- 2 Hyoid bone
- 3 Thyrohyoid muscle
- 4 Sternothyroid muscle
- 5 Thyroid gland
- 6 Second rib
- 7 Anterior belly of digastric muscle
- 8 Mylohyoid muscle
(and mylohyoid raphe)
- 9 Omohyoid muscle
- 10 Thyroid cartilage
- 11 Sternocleidomastoid muscle
- 12 Sternohyoid muscle
- 13 Clavicle
- 14 Subclavius muscle
- 15 Posterior belly of digastric muscle
- 16 Stylohyoid muscle
- 17 Scalenus muscles
- 18 Trapezius muscle
- 19 First rib
- 20 Scapula
- 21 Trachea
- 22 Manubrium sterni

Muscles of the neck (anterior aspect). Sternocleidomastoid and sternohyoid muscles on the right have been divided and reflected.

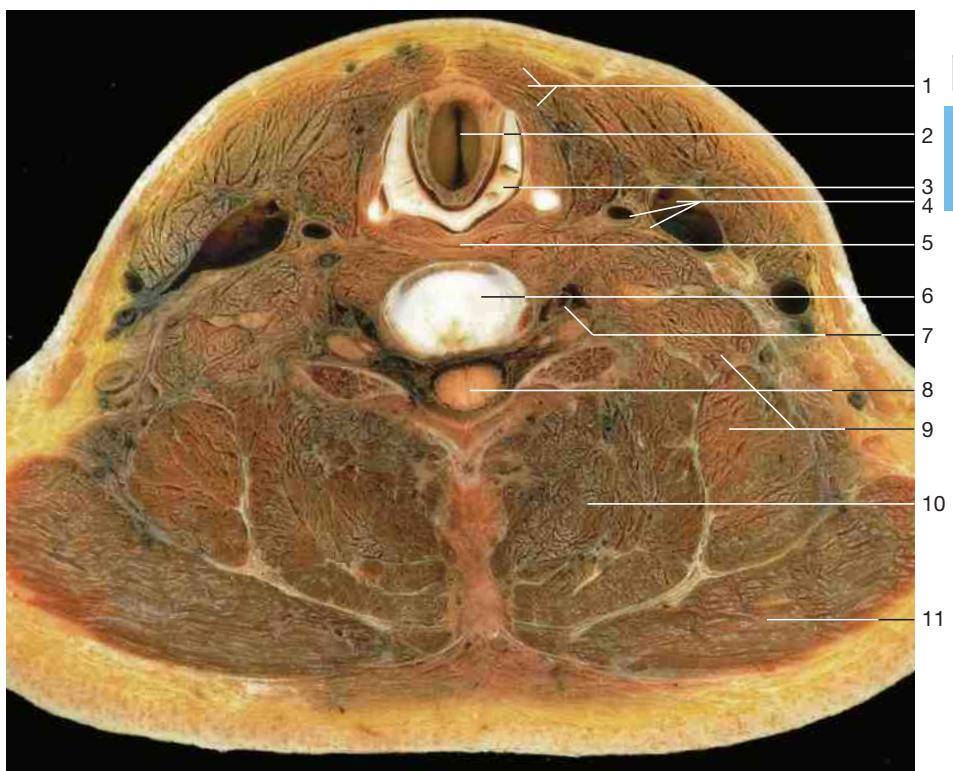

Muscles of the neck (anterior aspect, schematic drawing).

The muscles of the neck are complex and highly sophisticated. There are two major groups of muscles to be distinguished according to their functional aspects. One group is constituted by muscles connecting head to the hyoid bone and the larynx. The second category of muscles links the head and the ribcage.

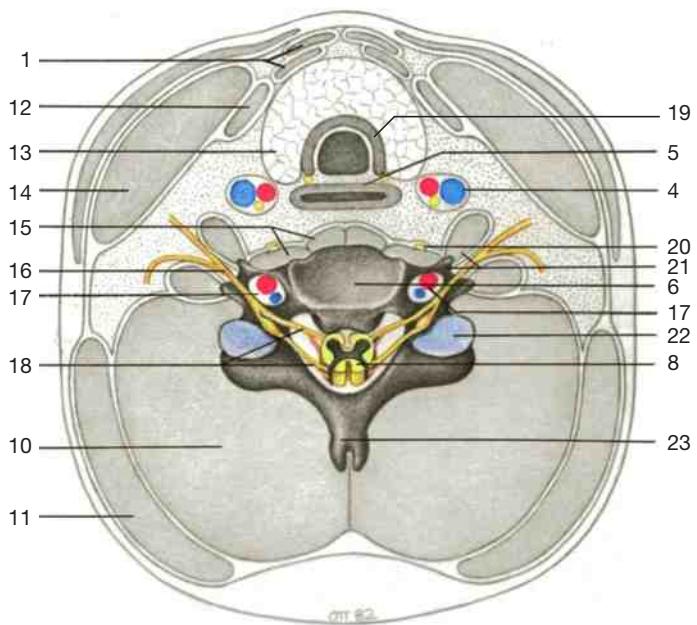

The sternocleidomastoid muscle represents the border between the anterior and posterior cervical triangle.

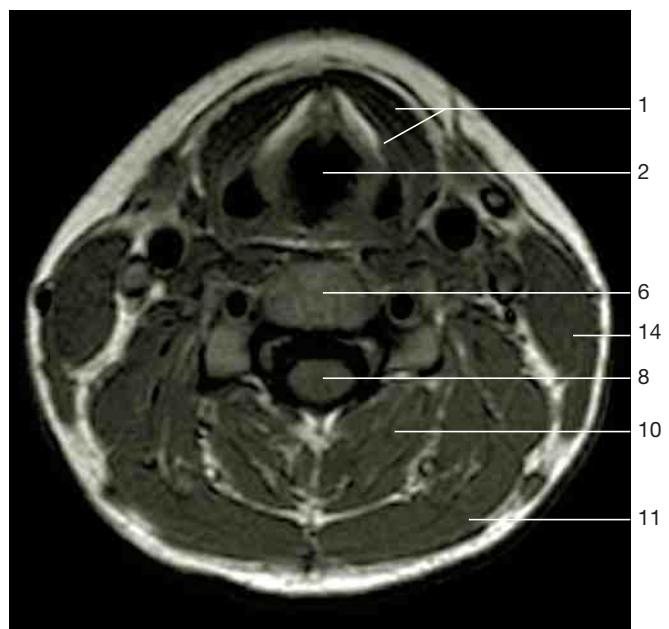

- 1 Sternohyoid and thyrohyoid muscles
- 2 Larynx
- 3 Cricoid cartilage
- 4 Internal jugular vein, common carotid artery, and vagus nerve
- 5 Esophagus
- 6 Body of cervical vertebra
- 7 Vertebral artery
- 8 Spinal cord
- 9 Scalenus posterior muscle
- 10 Deep muscles of the neck
- 11 Trapezius muscle
- 12 Omohyoid muscle
- 13 Thyroid gland
- 14 Sternocleidomastoid muscle
- 15 Longus colli and longus capitis muscles
- 16 Cervical spinal nerve
- 17 Vertebral artery and vein, and foramen transversarium
- 18 Ventral and dorsal root of cervical spinal nerve
- 19 Trachea
- 20 Sympathetic trunk
- 21 Anterior tubercle of transverse process and origin of scalenus anterior and medius muscles
- 22 Superior facet of articular process
- 23 Spinous process

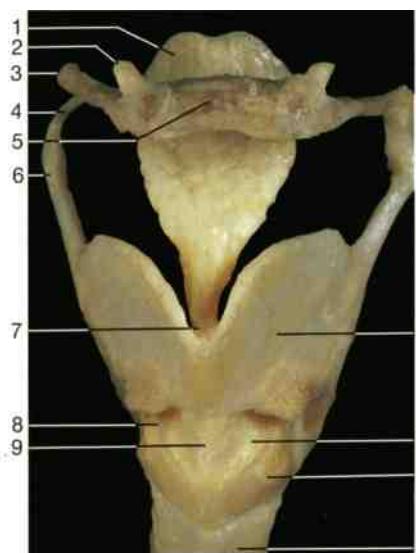

Axial section of the neck at the level of the intervertebral disc between the 5th and 6th cervical vertebra (inferior aspect).

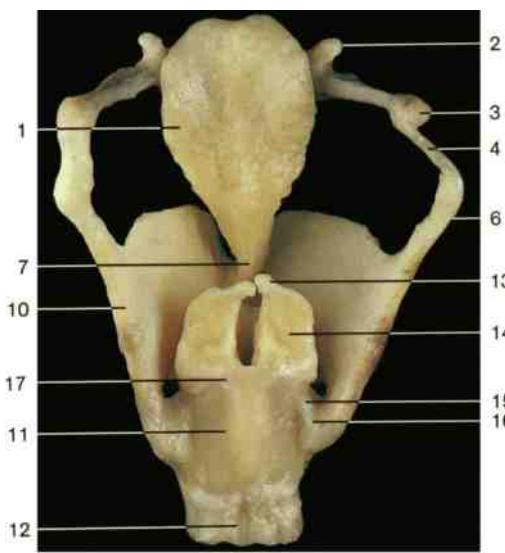

Organization of the neck (axial section at the level of the thyroid gland; schematic drawing).

Axial section of the neck at the level of the 4th cervical vertebra (MRI scan; from Heuck et al., MRT-Atlas, 2009).

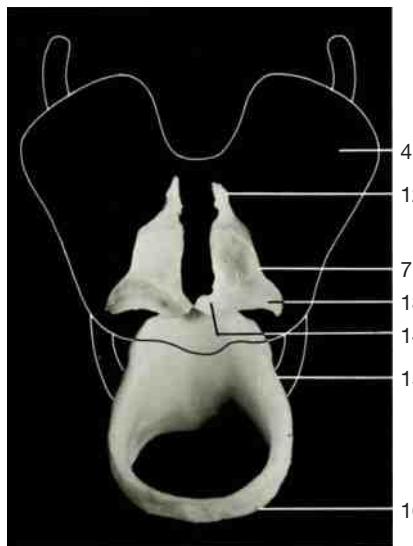

Cartilages of the larynx and the hyoid bone (anterior aspect).

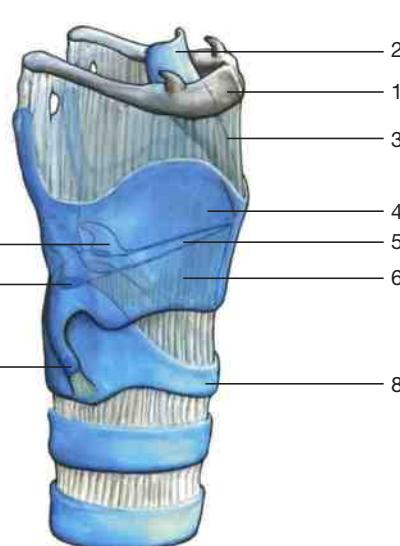

Cartilages of the larynx and the hyoid bone (posterior aspect).

- 1 Epiglottis
- 2 Lesser cornu of hyoid bone

- 53 Jugular venous arch
- 54 Left brachiocephalic vein
- 55 Pericardium of heart (location of right atrium)
- 56 Transverse cervical artery

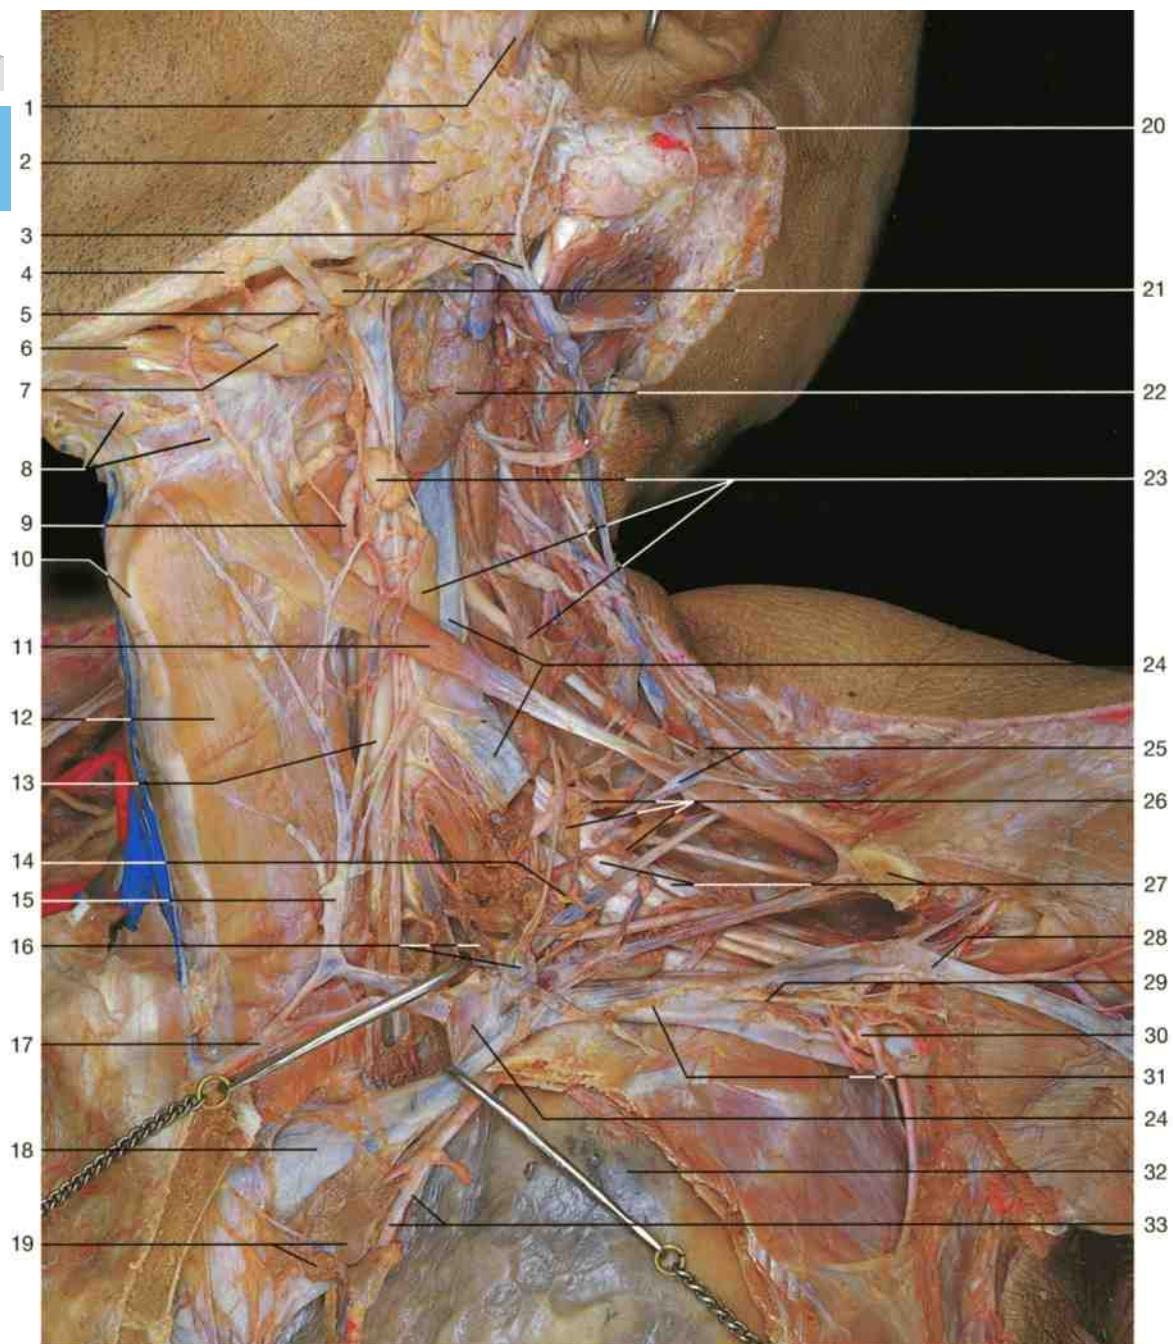

Veins of head and neck. Sternocleidomastoid muscle and anterior thoracic wall partly removed. Note the venous connection with the superior vena cava.

Veins of head and neck (anterior aspect). Part of the thoracic wall, clavicle, and sternocleidomastoid muscle have been removed. Veins are colored blue; arteries, red.

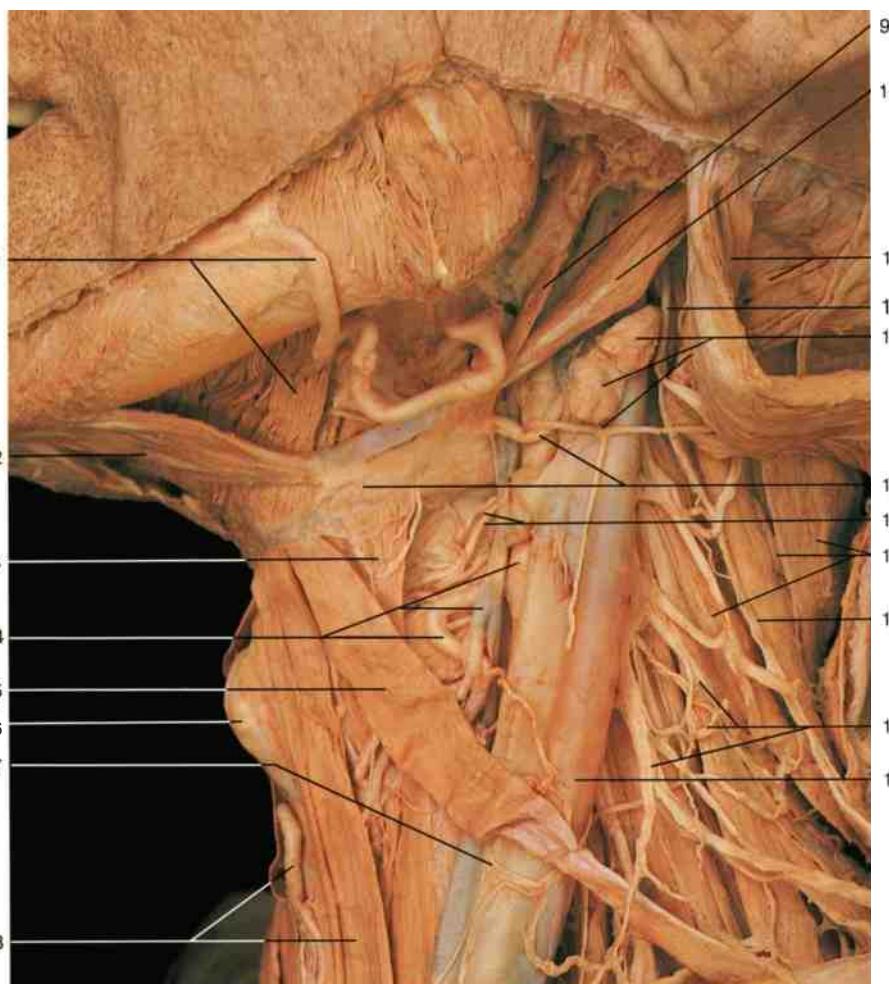

The **internal jugular vein** is the continuation of the sigmoid sinus, which drains most of the venous blood from the brain together with the external cerebrospinal fluid. By joining the subclavian vein, it forms the right brachiocephalic vein, which continues on the right side directly into the superior vena cava. The common way to introduce the lead from a pacemaker device into the heart is by way of the cephalic vein. On the left side, the thoracic duct joins the internal jugular vein at the point where the subclavian vein

and the internal jugular vein form the left brachiocephalic vein. Note that the subclavian vein lies in front of the scalenus anterior muscle, whereas the subclavian artery and the brachial plexus lie posterior to that muscle. The **cephalic vein** joins the axillary vein by passing into the deltopectoral triangle. The **subclavian vein** is strongly fixed to the first rib, so it can be punctured with a needle at that point (underneath the sternal end of the clavicle) to introduce a catheter (subclavian line).

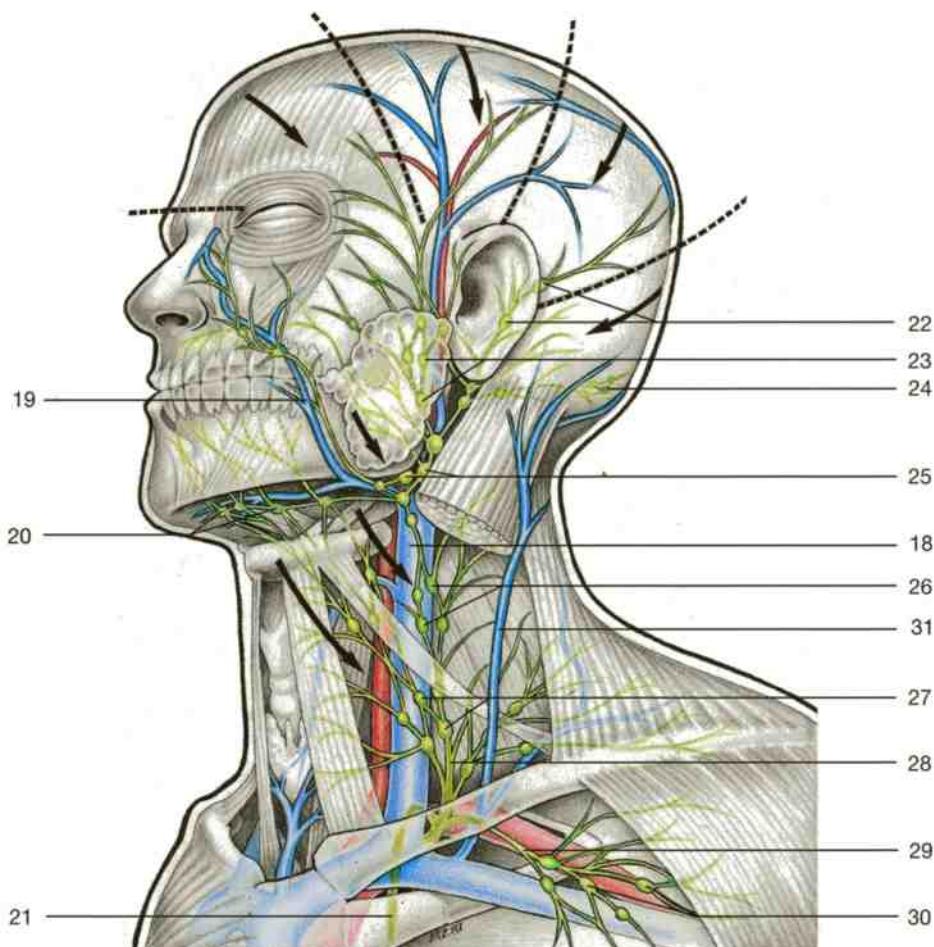

Lymph nodes and lymph vessels of the neck, left side oblique (oblique-lateral aspect). The sternocleidomastoid muscle and the left half of the thoracic wall have been removed. Lower part of the internal jugular vein has been cut and laterally displaced to show the thoracic duct.

- 22 Sternohyoid and sternothyroid muscles
- 23 Clavicle
- 24 Superficial temporal artery and vein
- 25 Occipital artery
- 26 Spinal nerves (C₃ and C₄)
- 27 Spinal processes of cervical vertebrae (C₄ and C₅)
- 28 Scapula

Nerves and vessels of the neck (lateral aspect).
The ansa cervicalis with connection to the spinal nerves is depicted.

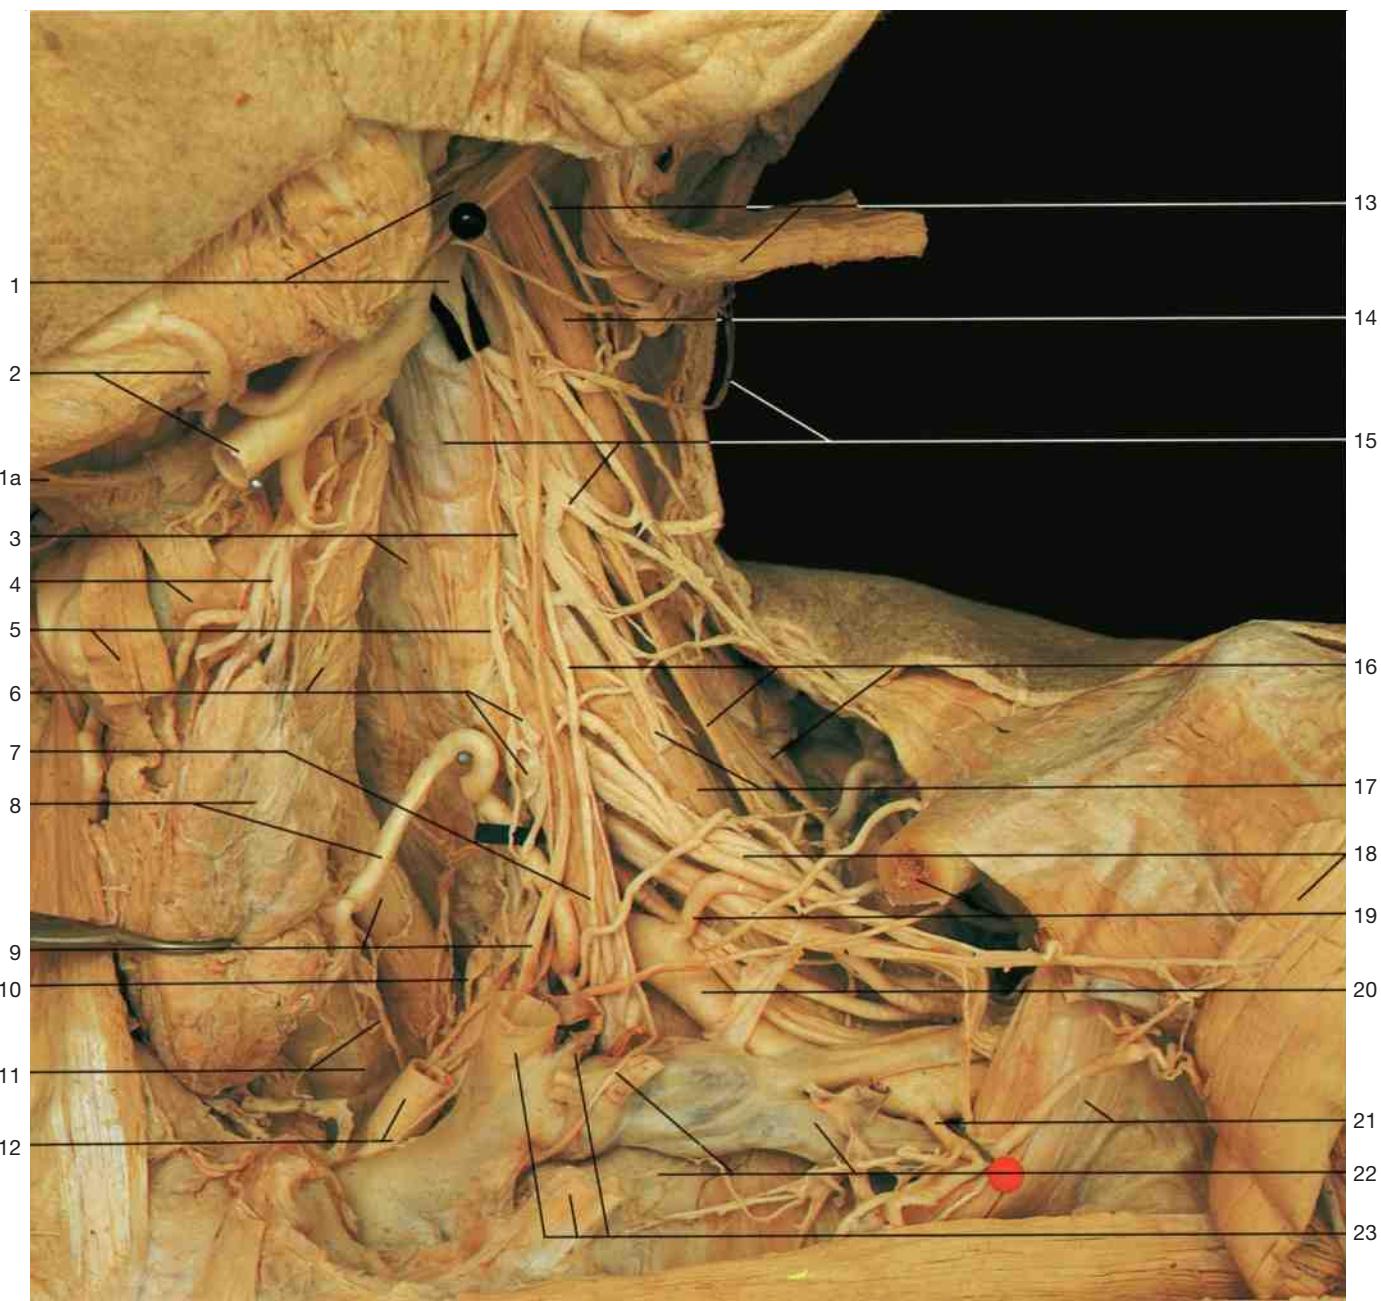

Neck, deeper dissection (lateral aspect). Clavicle partly removed to show the slit between the scalenus muscles. Internal jugular vein removed.

- 1 Masseter muscle
- 2 Mylohyoid muscle and facial artery
- 3 Anterior belly of digastric muscle
- 4 Hypoglossal nerve
- 5 Sternohyoid muscle
- 6 Omohyoid muscle, superior thyroid artery and vein
- 7 Sternothyroid muscle, thyroid cartilage, and pyramidal lobe of thyroid gland
- 8 Common carotid artery and sympathetic trunk
- 9 Ansa cervicalis
- 10 Phrenic nerve, ascending cervical artery, and anterior scalenus muscle

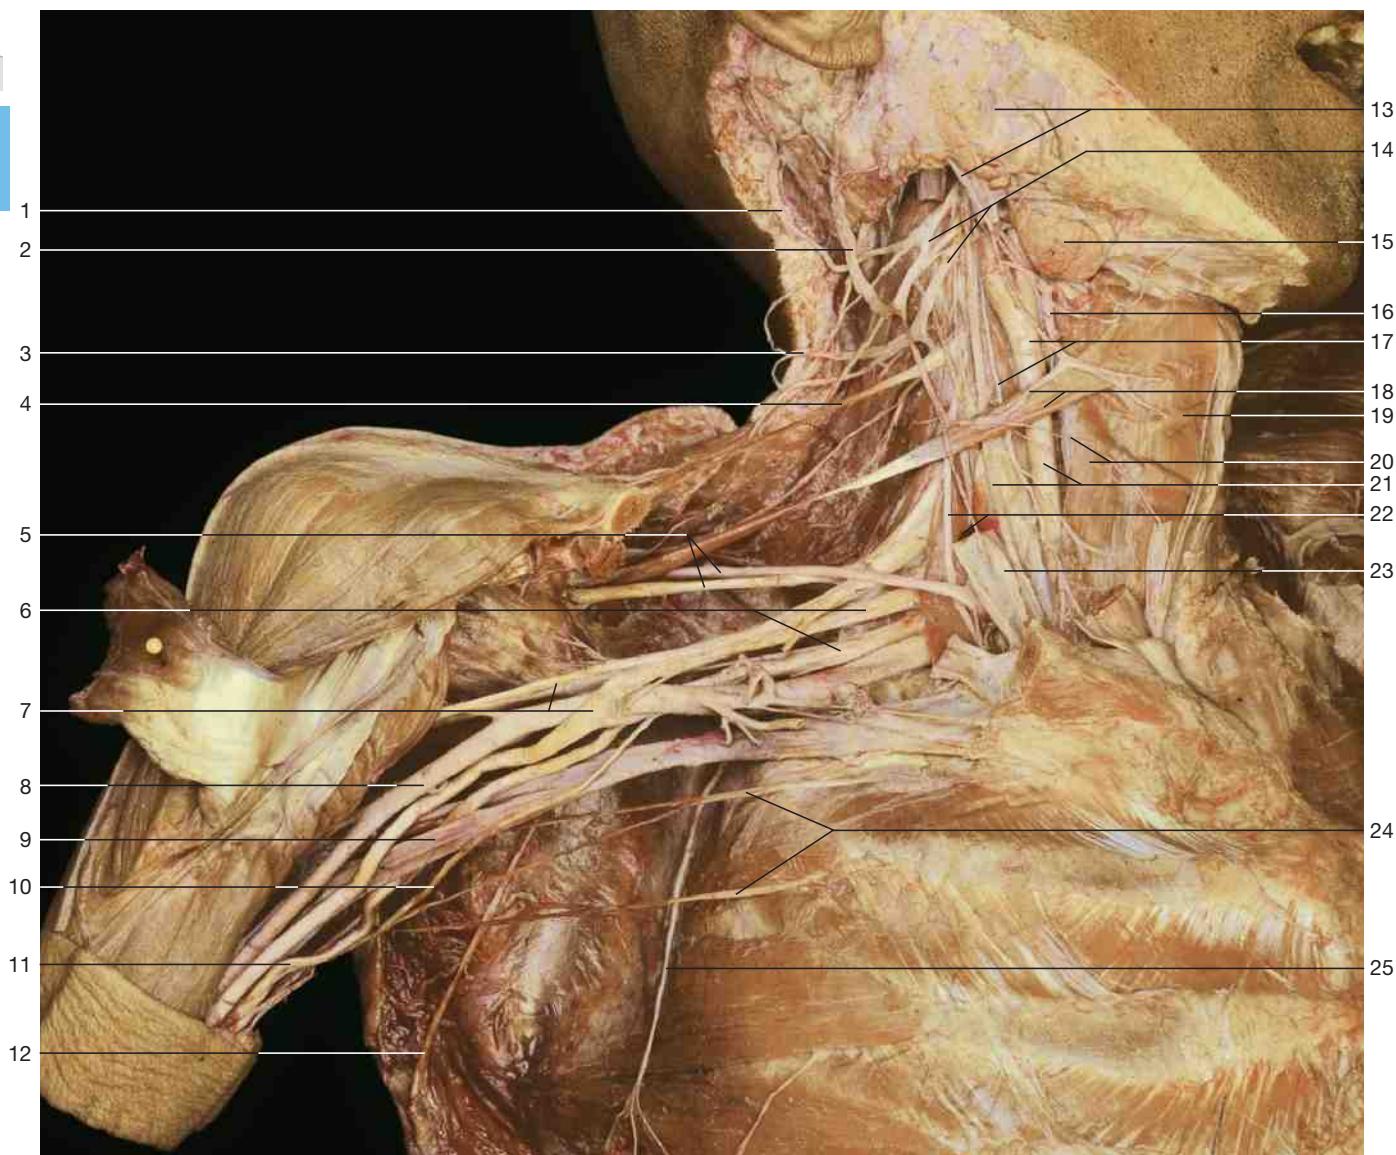

- 11 Inferior thyroid artery, vagus nerve, and internal jugular vein (cut)
- 12 Thyroid gland and unpaired inferior thyroid venous plexus
- 13 Thoracic duct and left subclavian trunk
- 14 Subclavius muscle (reflected)
- 15 Sternocleidomastoid muscle (reflected)
- 16 Posterior belly of digastric muscle
- 17 Superior cervical ganglion and splenius muscle
- 18 Lesser occipital nerve
- 19 Internal carotid artery and branch of the glossopharyngeal nerve to the carotid body
- 20 External carotid artery

- 21 Cervical plexus and accessory nerve
- 22 Inferior root of ansa cervicalis
- 23 Supraclavicular nerve
- 24 Levator scapulae muscle
- 25 Scalenus medius muscle and clavicle
- 26 Transverse cervical artery, brachial plexus, and scalenus posterior muscle
- 27 Subclavian artery and vein
- 28 Thoraco-acromial artery and pectoralis minor muscle
- 29 Pectoralis major muscle

Neck, deepest dissection (antero-lateral aspect). Thyroid gland reflected to expose the esophagus and the recurrent laryngeal nerve.

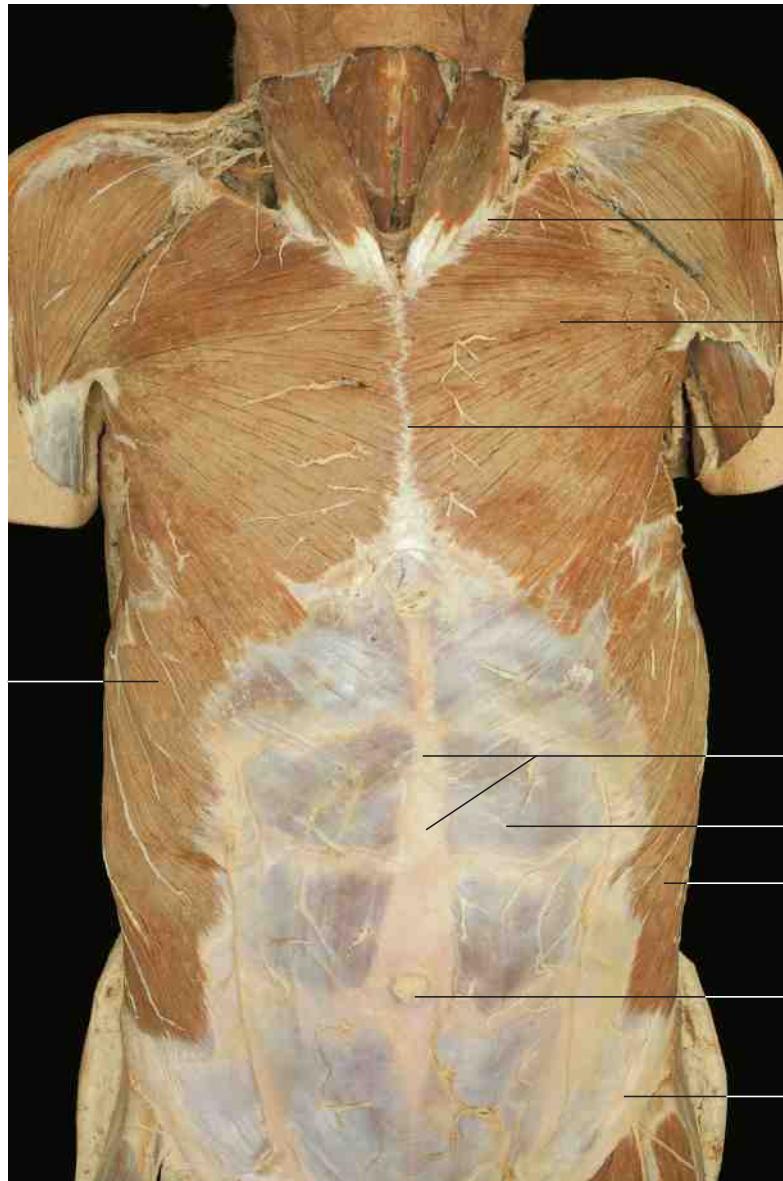

- 1 Superior cervical ganglion of sympathetic trunk and posterior belly of digastric muscle
- 1a Anterior belly of digastric muscle
- 2 Facial artery and common carotid artery (reflected anteriorly)
- 3 Ascending cervical artery and longus colli muscle
- 4 Omohyoid muscle and superior thyroid artery
- 5 Sympathetic trunk and sternohyoid muscle
- 6 Middle cervical ganglion and inferior pharyngeal constrictor muscle
- 7 Scalenus anterior muscle and phrenic nerve
- 8 Thyroid gland and inferior thyroid artery
- 9 Vagus nerve and esophagus
- 10 Stellate ganglion
- 11 Recurrent laryngeal nerve and trachea
- 12 Common carotid artery and cervical cardiac branch of vagus nerve
- 13 Sternocleidomastoid muscle and accessory nerve
- 14 Splenius capitis muscle
- 15 Lesser occipital nerve, longus capitis muscle, and cervical plexus
- 16 Phrenic nerve, scalenus posterior muscle, and levator scapulae muscle
- 17 Suprascapular nerves and scalenus medius muscle
- 18 Brachial plexus and pectoralis major muscle (clavicular head)
- 19 Transverse cervical artery and clavicle
- 20 Subclavian artery
- 21 Thoraco-acromial artery and pectoralis minor muscle
- 22 First rib, accessory phrenic nerve, and subclavian vein
- 23 Internal jugular vein, thoracic duct, and subclavius muscle

Neck and arm, deepest dissection (antero-lateral aspect). Cervical and brachial plexuses and their relation to the blood vessels are shown. Note the location and content of scalene triangle. Sternocleidomastoid muscle and clavicle have been removed; the internal jugular vein was divided to display the roots of cervical and brachial plexuses.

- | | |

3 Trunk

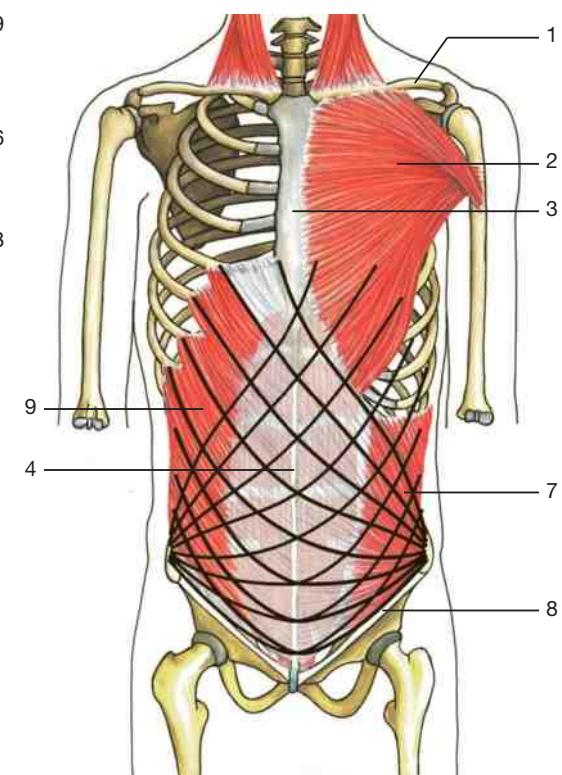

Anterior thoracic and abdominal walls with superficial musculature.
The fascia of pectoralis major muscle and the abdominal wall have been removed; the anterior layer of the rectus abdominis muscle is displayed.

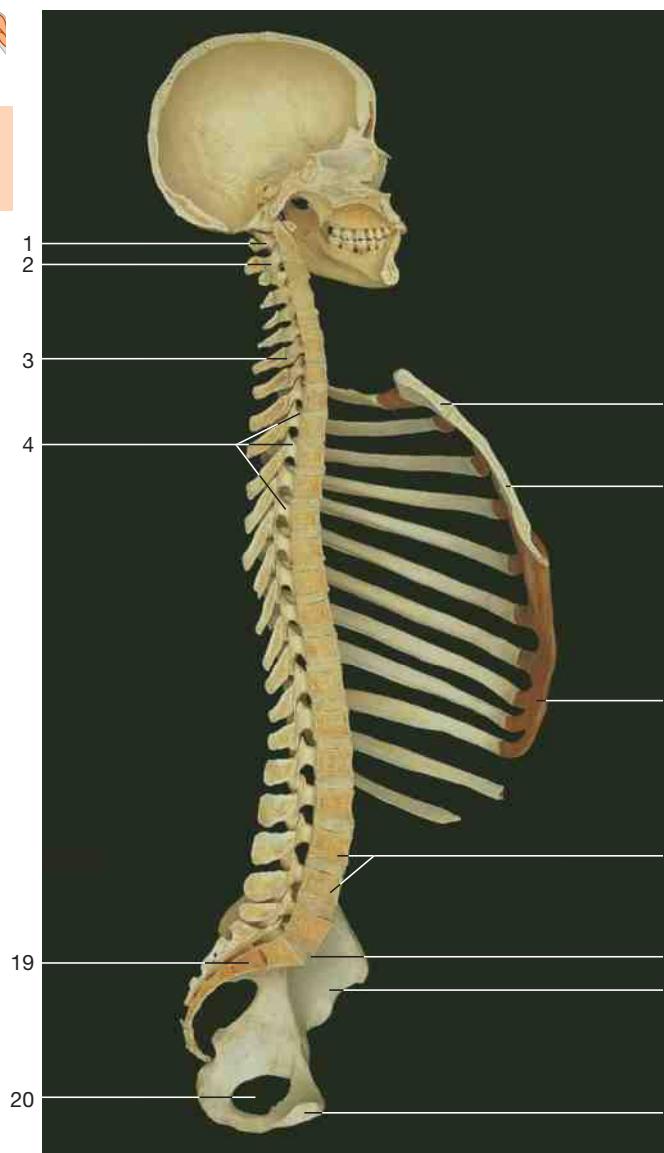

- 1 Clavicle
- 2 Pectoralis major muscle
- 3 Sternum
- 4 Linea alba
- 5 Anterior layer of rectus sheath
- 6 Umbilicus
- 7 Internal abdominal oblique muscle
- 8 Inguinal ligament
- 9 External abdominal oblique muscle

The anterior abdominal and thoracic walls reveal a segmental structure. The ribs are connected by intercostal muscles forming defined skeleto-motoric and neuro-vascular segments.

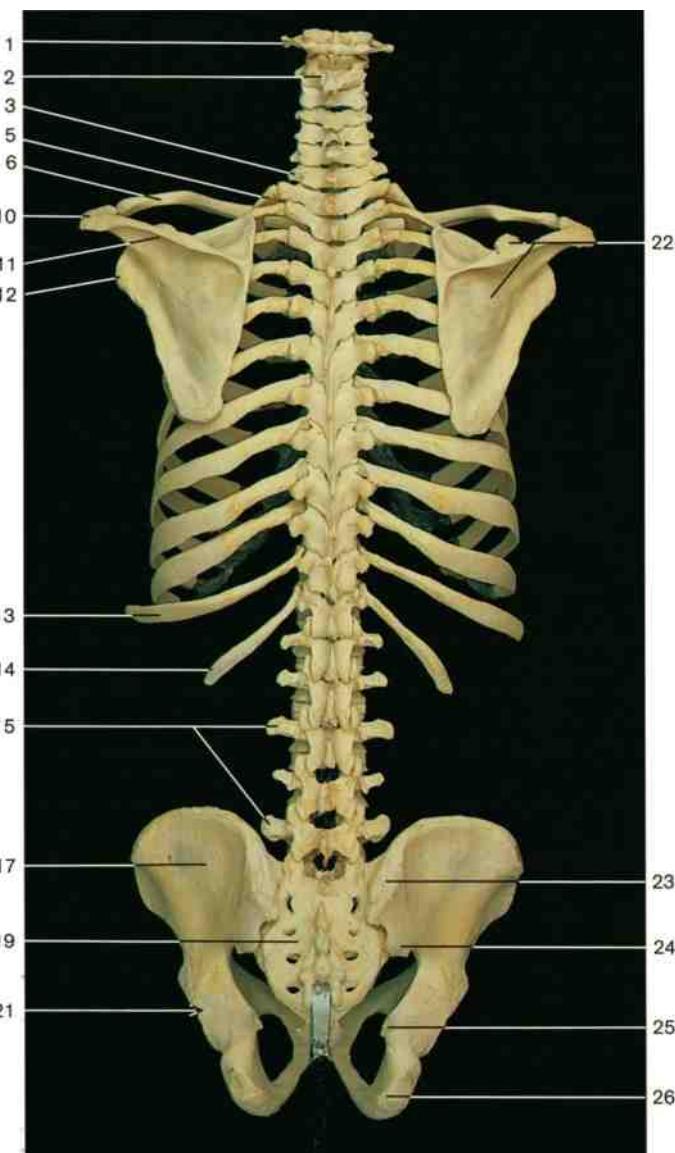

At the abdominal wall, the segments form great flat muscles, that end anteriorly in strong sheet-like aponeuroses. The aponeurosis interlace at the linea alba with their counterparts from the opposite side to form the tough tendinous sheath of the rectus muscle. Movements of the abdominal wall also support the process of respiration functionally related to the diaphragm.

Organization of the thoracic and abdominal walls.
The architecture of tendon fibers of the two abdominal oblique muscles in the rectus sheath is shown.

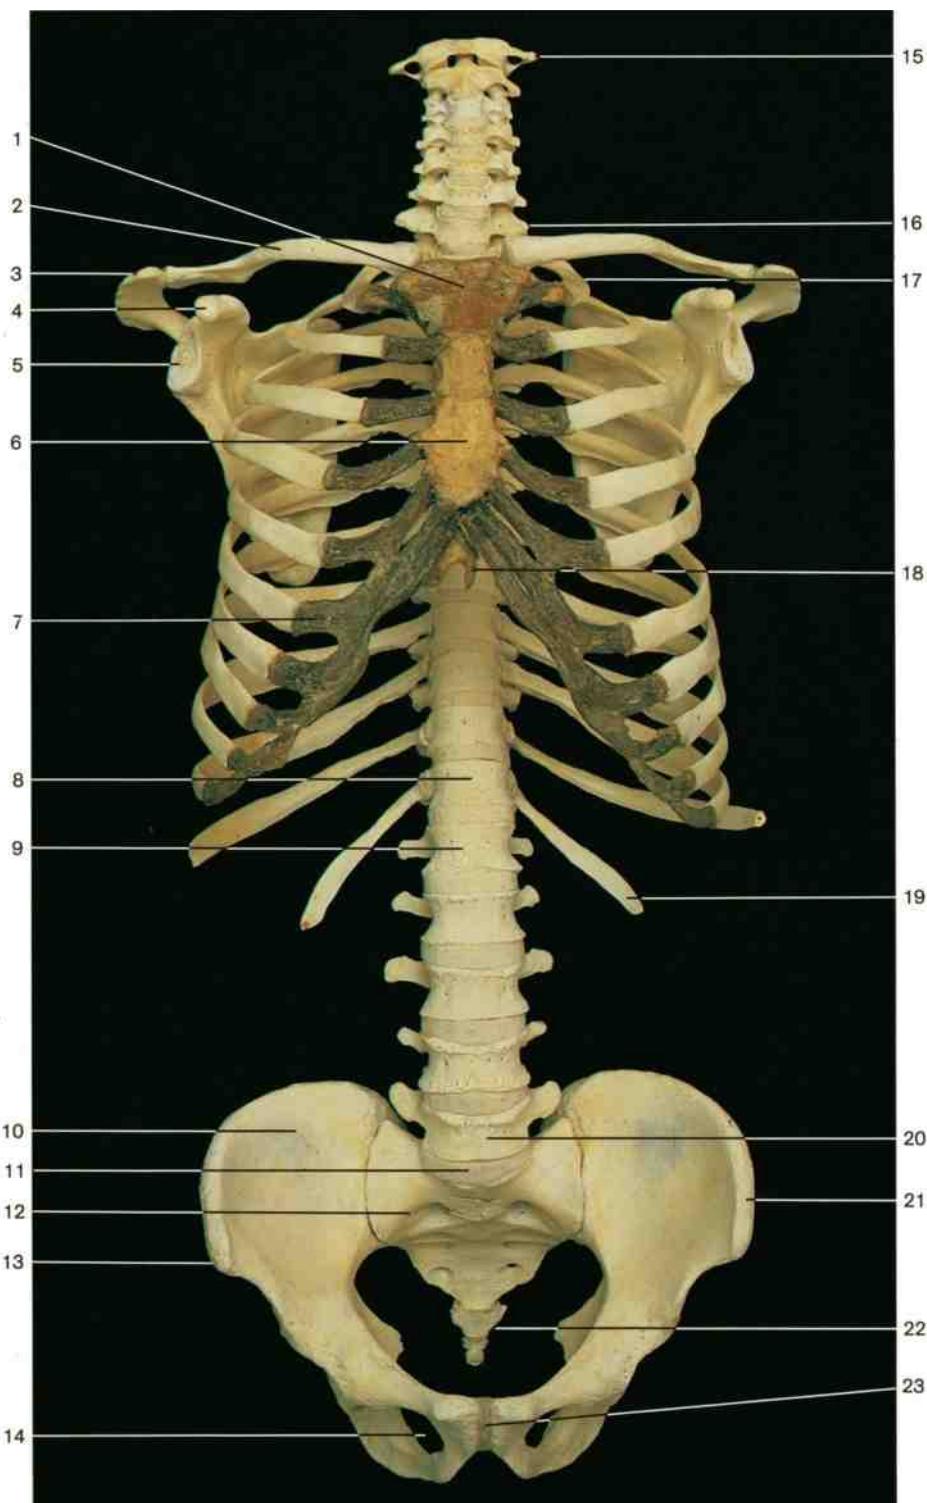

Median sagittal section through the vertebral column, head, and thorax of the adult.

Skeleton of the trunk, vertebral column, thorax, and pelvis (posterior aspect).

The two caudal lumbar vertebrae and the sacrum with their intervertebral discs (anterior aspect). Anterior longitudinal ligament removed.

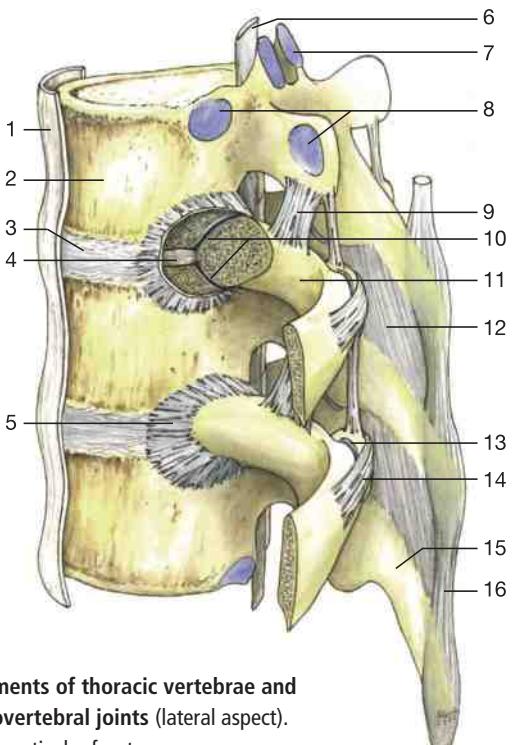

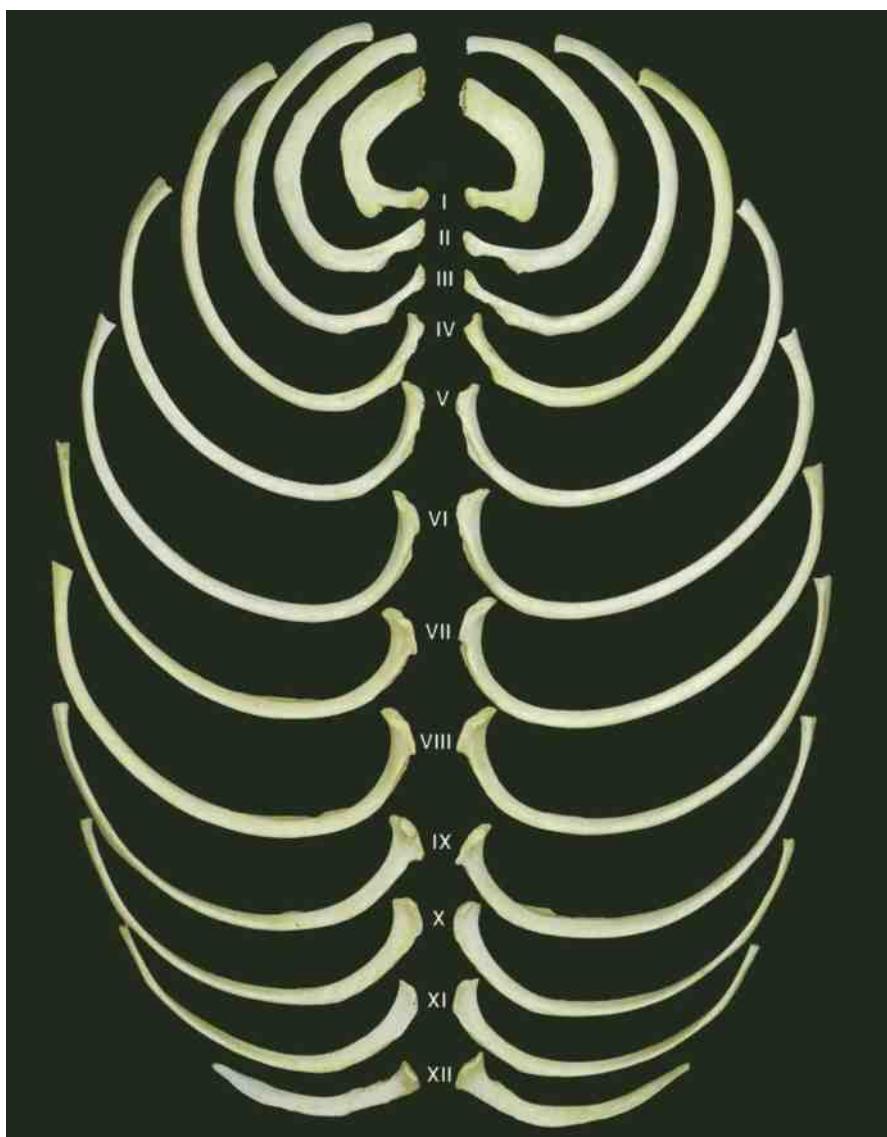

Ligaments of the vertebral column, thoracic part (left lateral aspect).

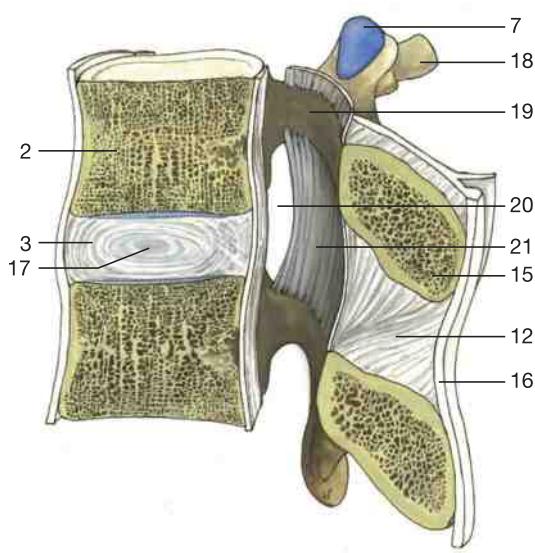

Disarticulated thorax skeleton.
The twelve ribs (I–XII) are arranged
in a craniocaudal direction.

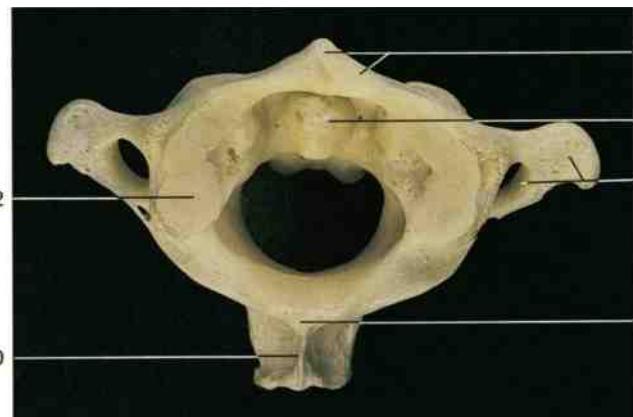

- 1 Anterior longitudinal ligament
- 2 Body of vertebra
- 3 Intervertebral disc
- 4 Intra-articular ligament
- 5 Radiate ligament
- 6 Posterior longitudinal ligament
- 7 Superior articular facet
- 8 Articular facets of
costovertebral joints
- 9 Superior costotransverse ligament
- 10 Costovertebral joint
- 11 Rib
- 12 Interspinal ligament
- 13 Costotransverse joint
- 14 Lateral costotransverse ligament
- 15 Spinous process
- 16 Supraspinal ligament
- 17 Nucleus pulposus
- 18 Costal process
- 19 Vertebral arch
- 20 Intervertebral foramen
- 21 Intertransverse ligament

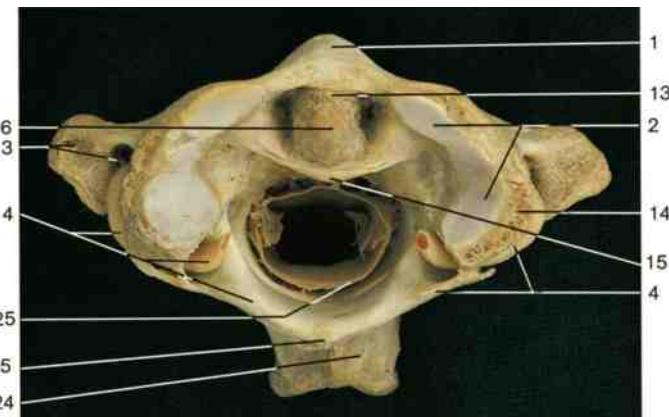

Ligaments of thoracic vertebrae and
costovertebral joints (lateral aspect).
Blue = articular facets.

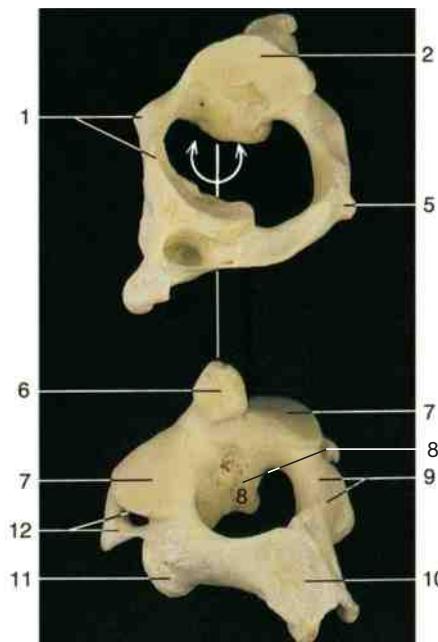

Median-sagittal section of two lumbar vertebrae showing
ligaments and vertebral discs.

Atlas and axis (from above).

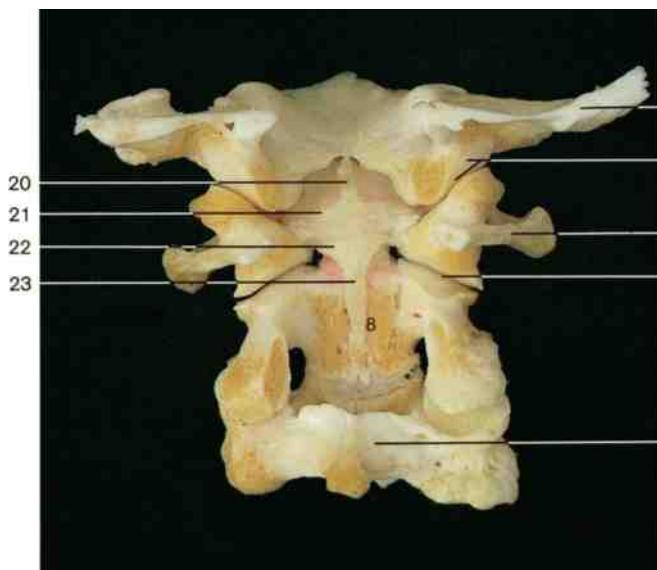

Median atlanto-axial joint and transverse ligament of atlas (from above). Dens of axis partly severed.

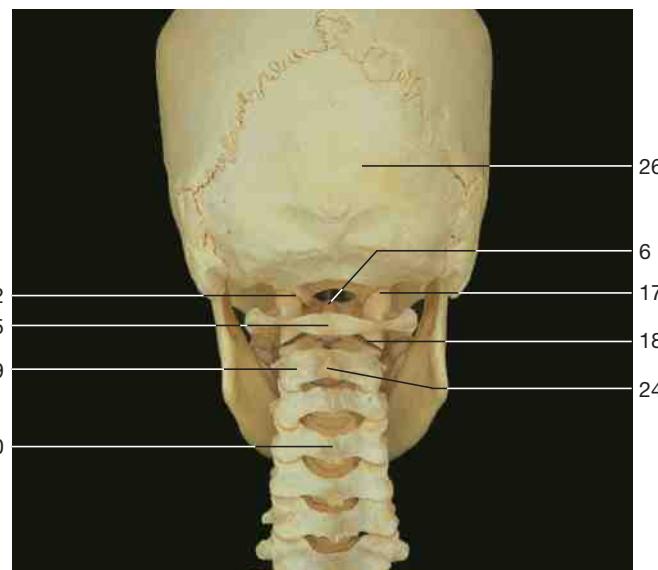

Atlas and axis. Left oblique postero-lateral aspect, demonstrating the articulation of the dens of axis with atlas (cf. arrows).

- | | | | |
|----|---|----|--|
| 1 | Anterior arch of atlas with anterior tubercle | 14 | Articular capsule of atlanto-occipital joint |
| 2 | Superior articular facet of atlas | 15 | Transverse ligament of atlas |
| 3 | Foramen transversarium and transverse process | 16 | Occipital bone |
| 4 | Posterior arch of atlas and vertebral artery | 17 | Atlanto-occipital joint |
| 5 | Posterior tubercle of atlas | 18 | Lateral atlanto-axial joint |
| 6 | Dens of axis | 19 | Third cervical vertebra |
| 7 | Superior articular surface of axis | 20 | Superior longitudinal band of cruciform ligament |
| 8 | Body of axis | 21 | Alar ligaments |
| 9 | Pedicle and lamina of axis | 22 | Transverse ligament of atlas |
| 10 | Spinous process | 23 | Inferior longitudinal band of cruciform ligament |
| 11 | Inferior articular process | 24 | Spinous process of axis |
| 12 | Transverse process and foramen transversarium of axis | 25 | Dura mater |
| 13 | Median atlanto-axial joint (anterior part) | 26 | Occipital bone |

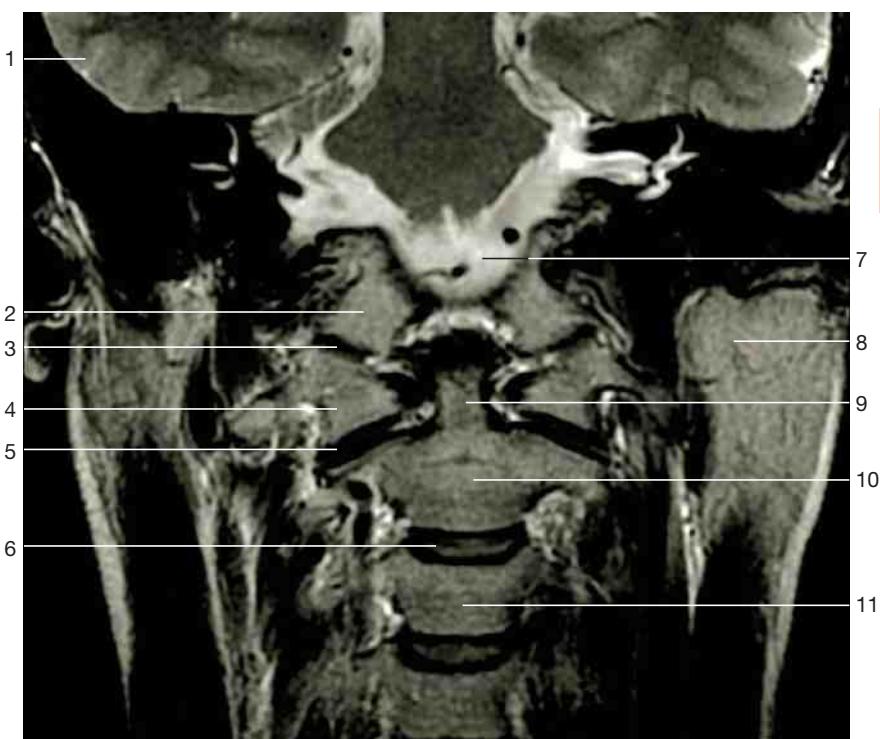

Atlanto-occipital and atlanto-axial joints (posterior aspect). Posterior part of occipital bone, posterior arch of atlas, and axis have been removed to show the cruciform ligament.

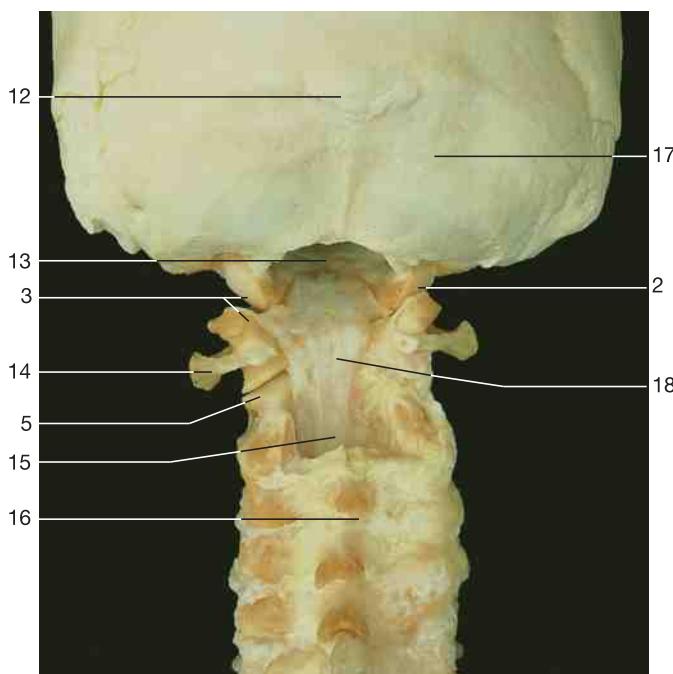

Head and cervical spine (posterior aspect). Bones of atlanto-occipital and atlanto-axial joints.

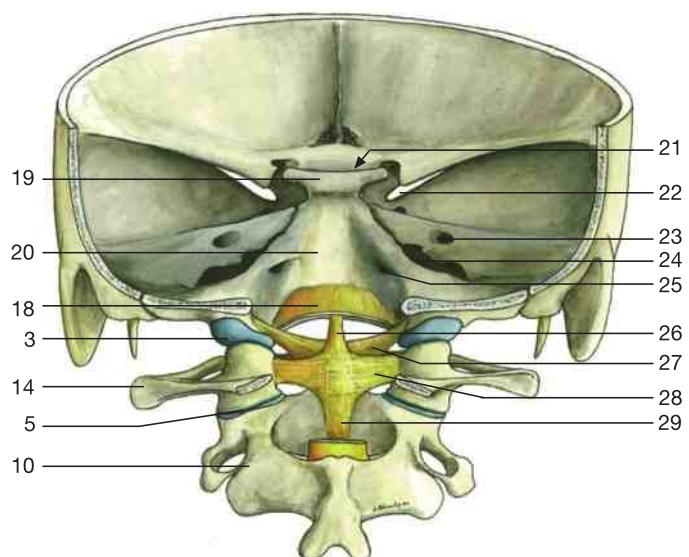

- 1 Cerebellum
- 2 Occipital condyle
- 3 Atlanto-occipital joint
- 4 Atlas
- 5 Lateral atlanto-axial joint
- 6 Intervertebral disc
- 7 Cistern of pons
- 8 Head of mandible
- 9 Dens of axis
- 10 Axis
- 11 Body of cervical vertebra (C_3)
- 12 External occipital protuberance
- 13 Foramen magnum
- 14 Transverse process of atlas
- 15 Posterior longitudinal ligament
- 16 Spinous process of cervical vertebra
- 17 Occipital bone
- 18 Membrana tectoria
- 19 Dorsum sellae
- 20 Clivus
- 21 Sella turcica
- 22 Superior orbital fissure
- 23 Internal acoustic meatus
- 24 Jugular foramen
- 25 Hypoglossal canal
- 26 Superior longitudinal band of cruciform ligament
- 27 Alar ligaments
- 28 Transverse ligament of atlas
- 29 Inferior longitudinal band of cruciform ligament

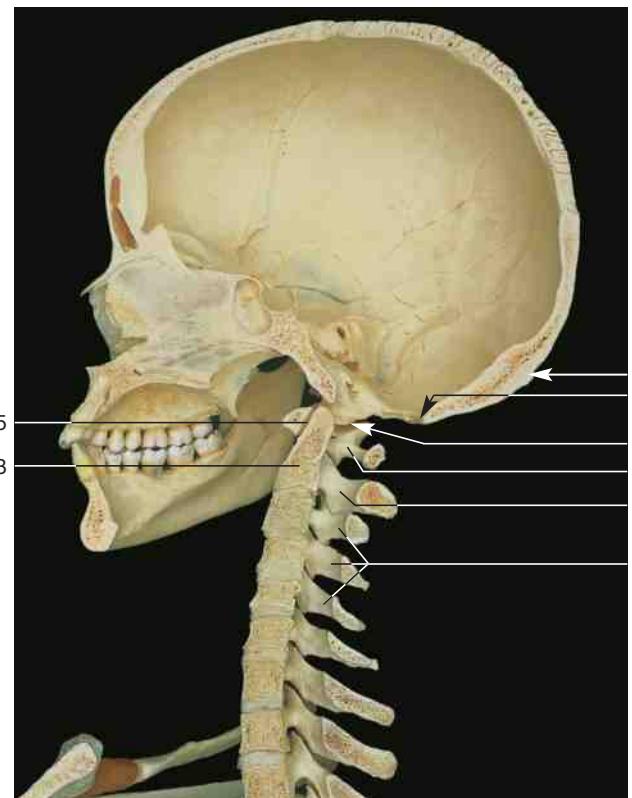

Coronal section of the neck at the level of dens of axis (MRI scan, courtesy of Prof. Heuck, Munich).

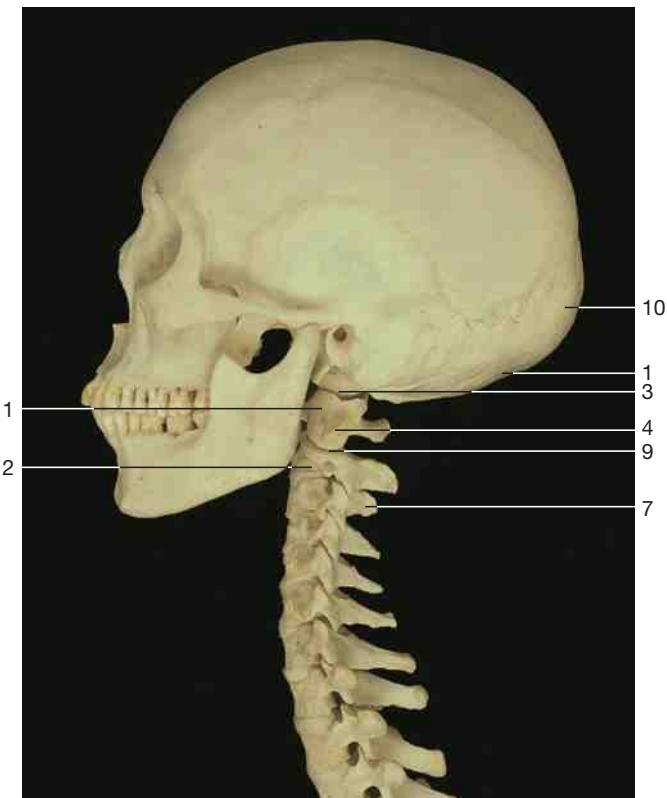

Cervical vertebral column and skull with ligaments (posterior aspect). Posterior arches of atlas and axis removed to show the membrana tectoria.

Atlanto-occipital and atlanto-axial joints with ligaments (posterior aspect). Posterior part of occipital bone and posterior arch of atlas have been removed to show the cruciform ligament.

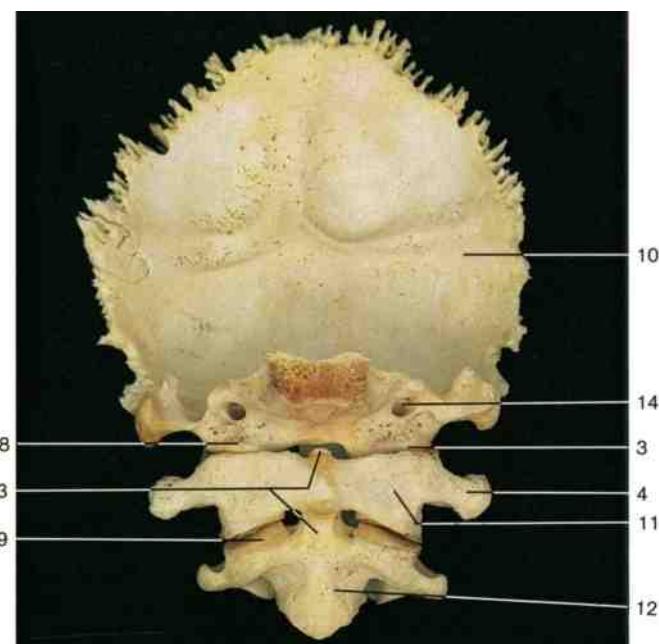

Cervical vertebral column in relation to the head
(midsagittal section, medial aspect).

Atlas and axis in relation to the head (lateral aspect).

- 1 External occipital protuberance
- 2 Foramen magnum
- 3 Atlanto-occipital joint
- 4 Transverse process of atlas
- 5 Median atlanto-axial joint
- 6 Vertebral canal
- 7 Spinous process of third cervical vertebra
- 8 Occipital condyle

- 9 Lateral atlanto-axial joint
- 10 Occipital bone
- 11 Atlas
- 12 Axis
- 13 Dens of axis
- 14 Hypoglossal canal
- 15 Spinous process of axis

Occipital bone, atlas, and axis (anterior aspect).

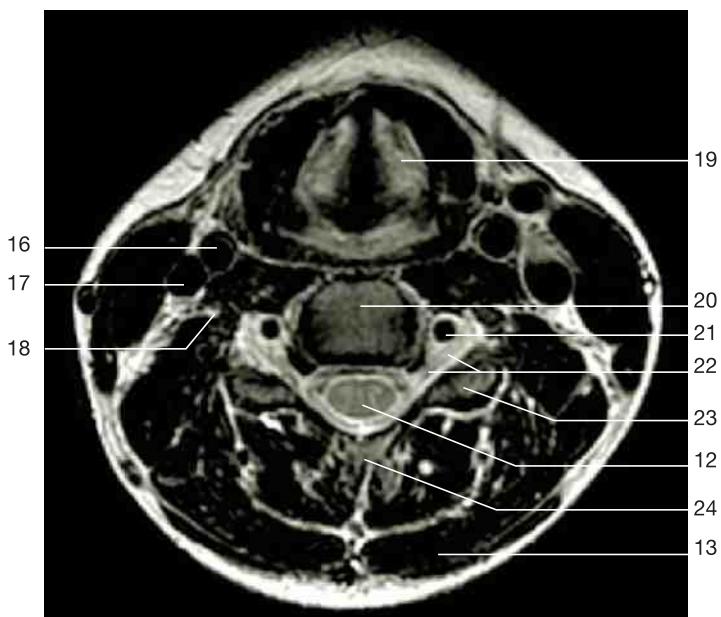

Occipital bone, atlas, and axis (left lateral aspect).

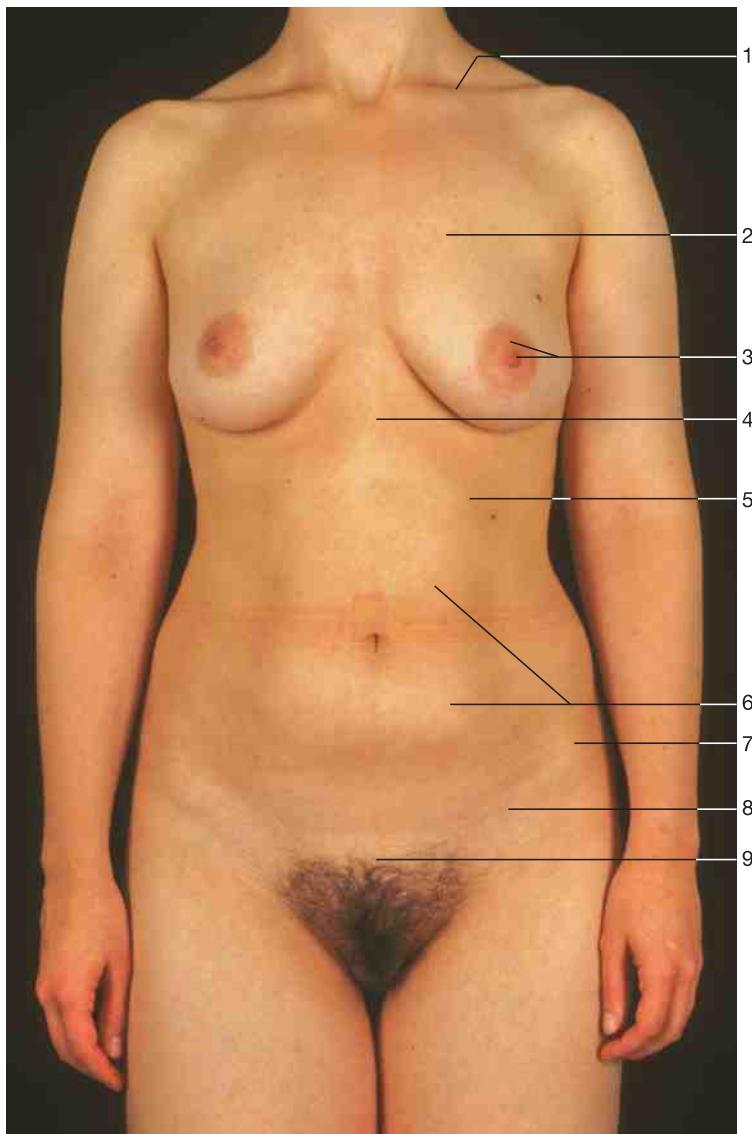

- 1 Pons
- 2 Base of skull (clivus)
- 3 Medulla oblongata
- 4 Atlas (anterior arch)
- 5 Dens of axis
- 6 Intervertebral disc
- 7 Body of cervical vertebra (C_4)
- 8 Site of larynx
- 9 Trachea
- 10 Cerebellum
- 11 Cerebellomedullary cistern
- 12 Spinal cord
- 13 Trapezius muscle
- 14 Muscles of the neck
- 15 Spinous process of cervical vertebra (C_7)
- 16 Internal jugular vein
- 17 Common carotid artery
- 18 Vagus nerve (n. X)
- 19 Larynx
- 20 Body of cervical vertebra
- 21 Vertebral artery
- 22 Spinal nerve with spinal ganglion
- 23 Transverse process of cervical vertebra
- 24 Spinous process of cervical vertebra

Midsagittal section of the neck showing the spinal cord in connection with medulla oblongata (MRI scan, courtesy of Prof. Heuck, Munich).

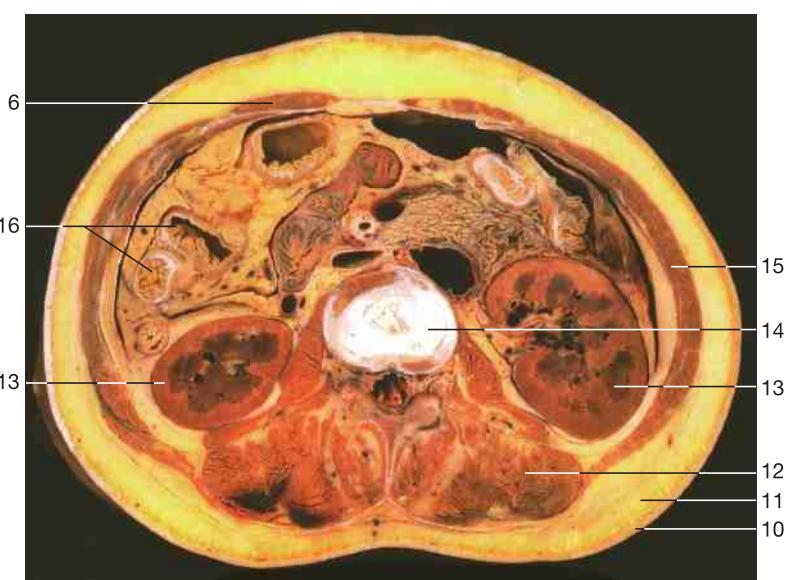

Horizontal section of the neck at the level of the larynx (MRI scan, courtesy of Prof. Heuck, Munich).

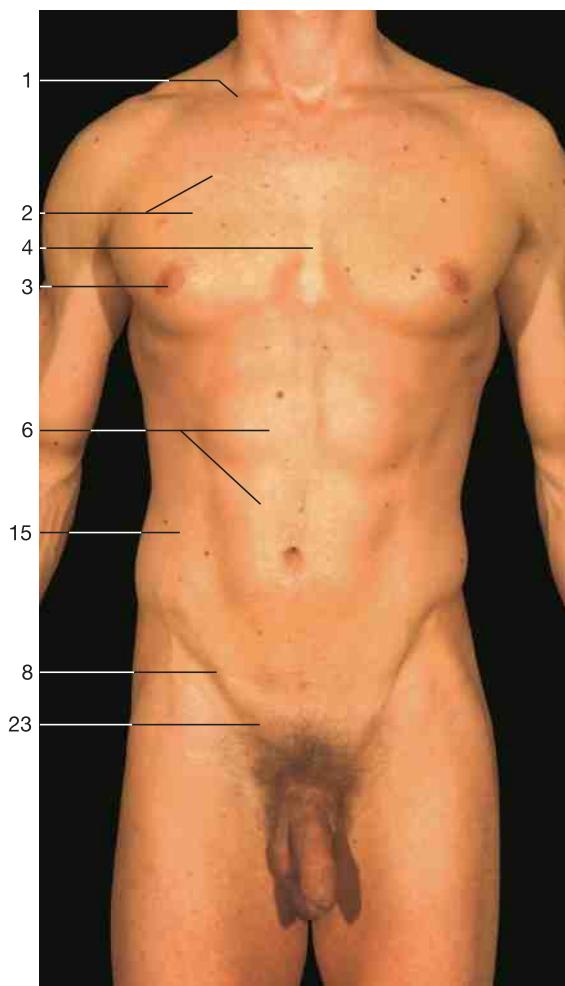

- 1 Clavicle
- 2 Pectoralis major muscle
- 3 Areola and nipple
- 4 Infrasternal angle
- 5 Costal arch
- 6 Rectus abdominis muscle
- 7 Anterior superior iliac spine
- 8 Inguinal ligament
- 9 Mons pubis
- 10 Epidermis
- 11 Subcutaneous layer
- 12 Muscles of the back
- 13 Kidney
- 14 Body of lumbar vertebra
- 15 External abdominal oblique muscle
- 16 Small intestine
- 17 Deltoid muscle
- 18 Anterior serratus muscle
- 19 External intercostal muscle
- 20 Internal abdominal oblique muscle
- 21 Transverse abdominal muscle
- 22 Rectus sheath
- 23 Spermatic cord
- 24 Pectoralis minor muscle
- 25 Linea alba

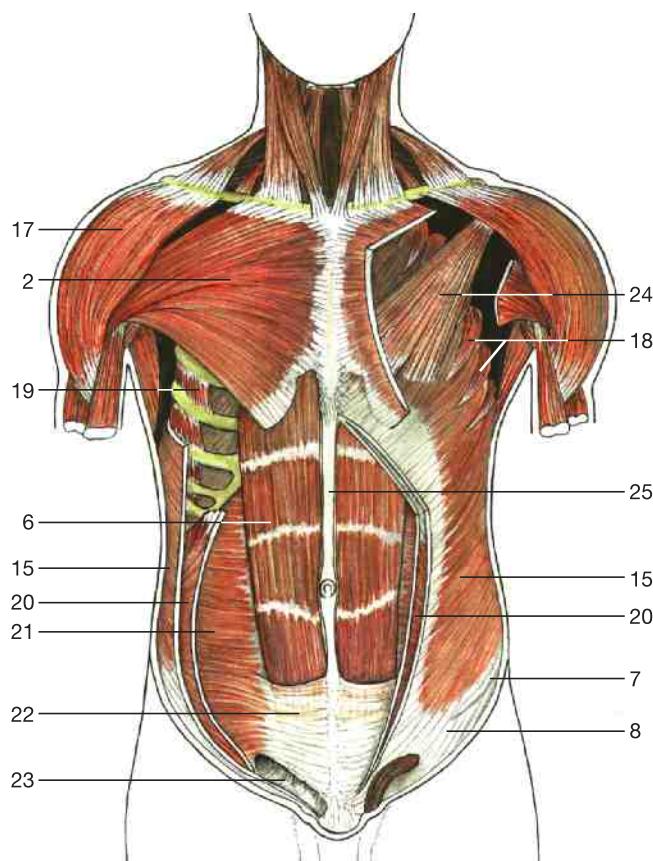

Surface anatomy of the anterior body wall in the female. Note the differences in thickness and structure of skin and hairs (compare with the section below).

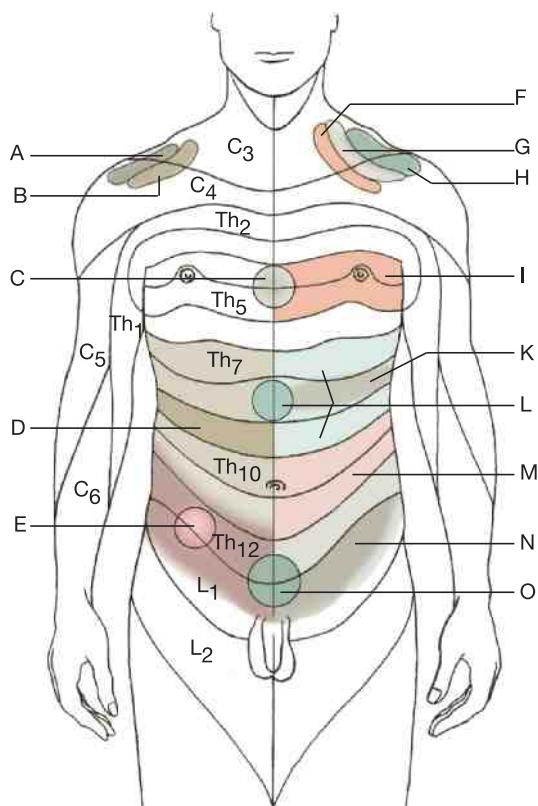

Cross section of the body at the first lumbar vertebra. Note the differences in thickness of the subcutaneous layers.

Surface anatomy of the anterior body wall in the male. Localization and structure of the muscles can be identified.

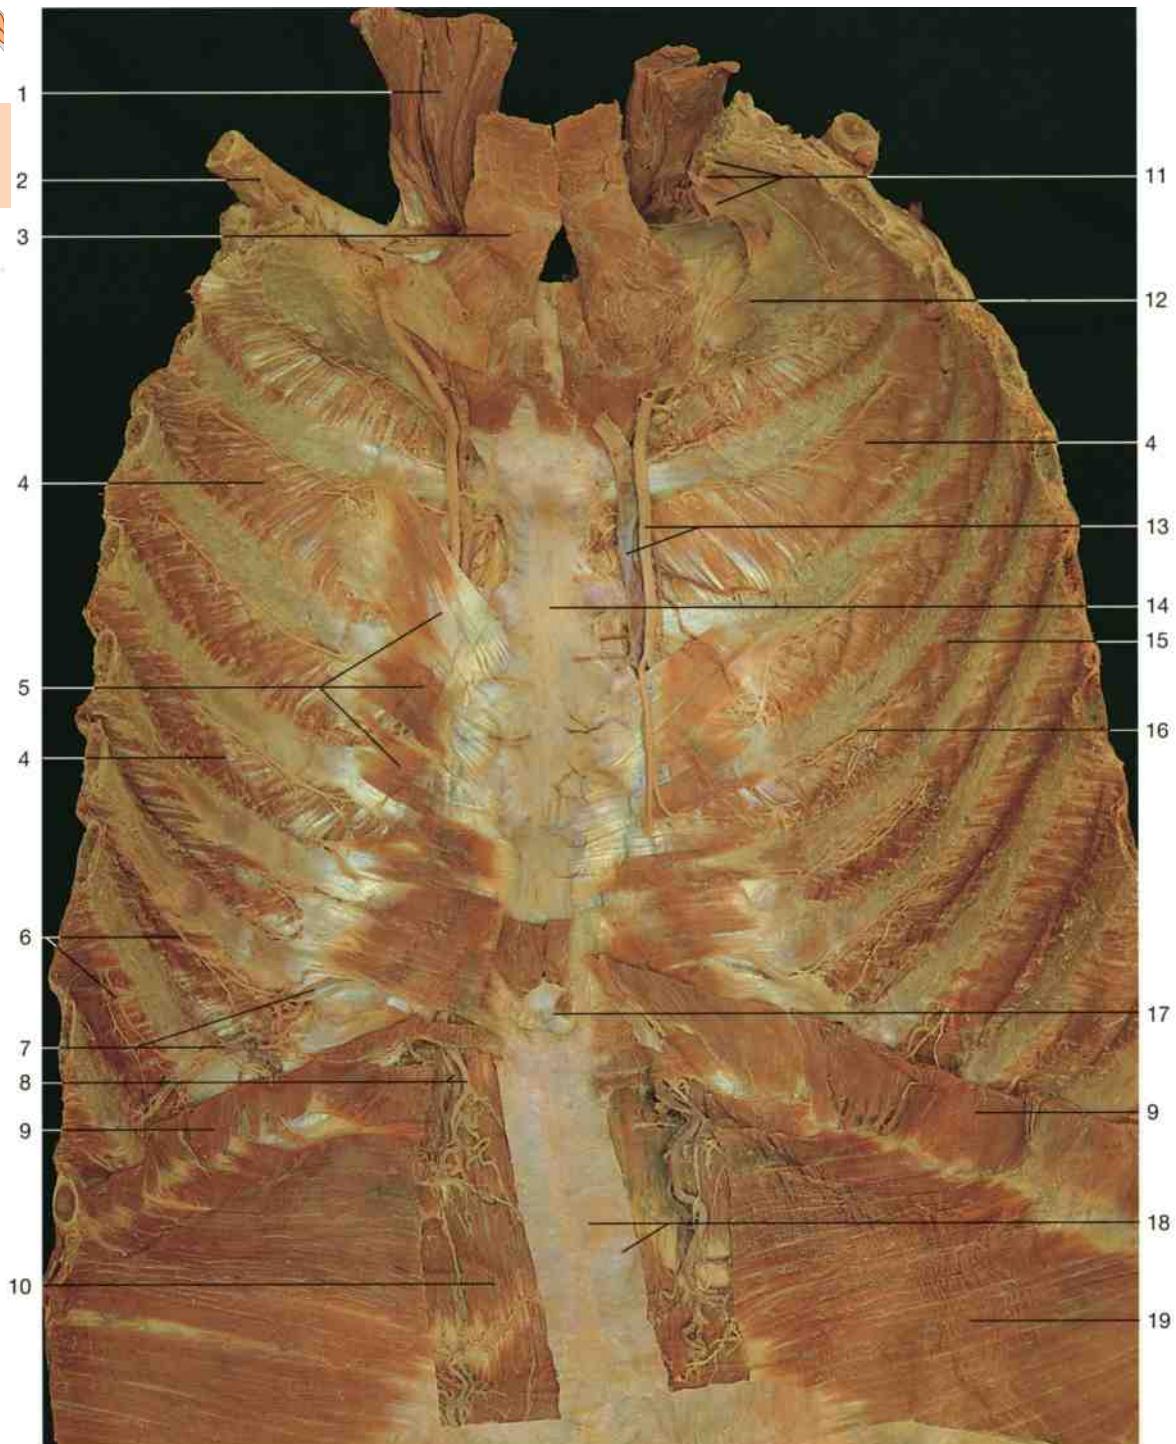

Muscles of the anterior body wall (schematic drawing).

Head's areas

- A = duodenum
- B = gallbladder, liver (C_3-C_4)
- C = esophagus (Th_4-Th_5)
- D = liver, gallbladder (Th_6-Th_{11})
- E = colon, vermiform appendix (Th_{11-12}, L_1)
- F = heart
- G = pancreas
- H = stomach (C_3, C_4)
- I = heart (Th_3, Th_4)
- K = pancreas (Th_8)
- L = stomach (Th_6-Th_9)
- M = small intestine ($Th_{10}-L_1$)
- N = kidney, ureter, testis ($Th_{10}-L_1$)
- O = urinary bladder ($Th_{11}-L_1$)

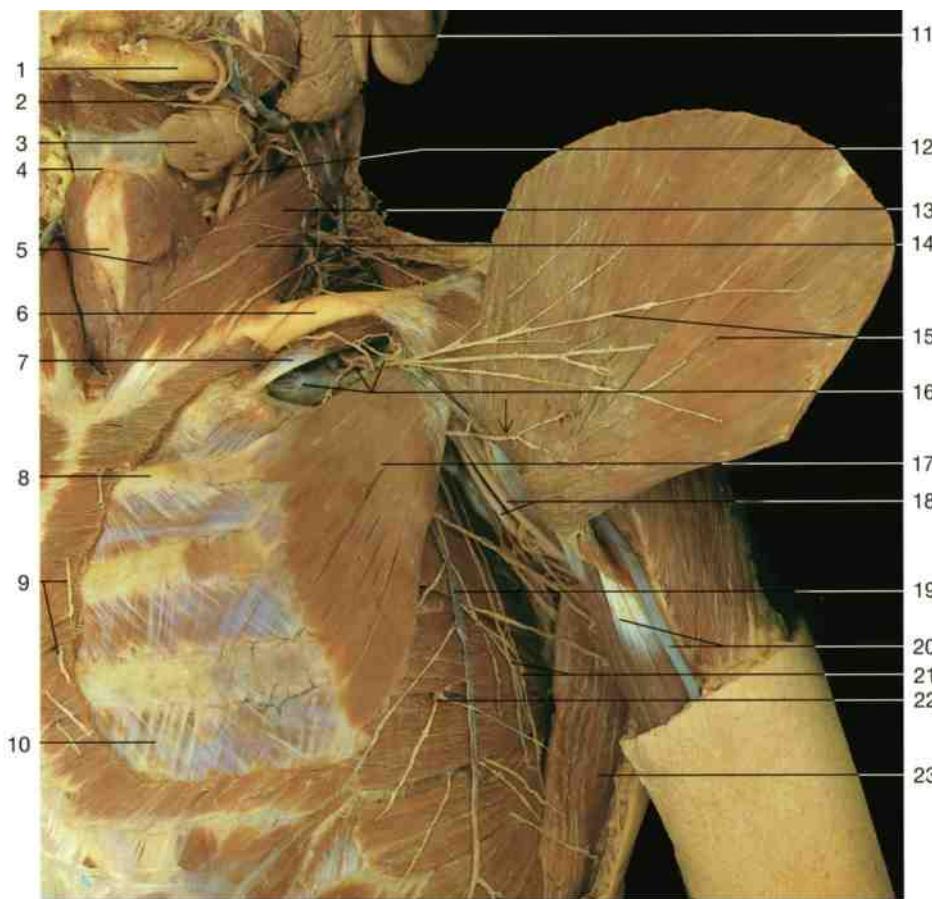

▷ **Segments of anterior body wall.**
Head's areas are indicated.

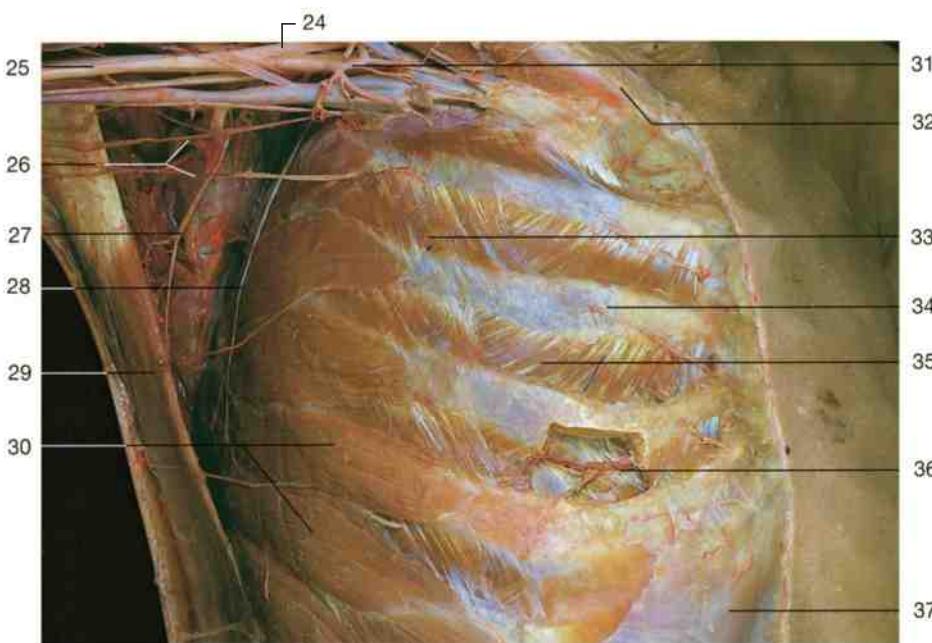

Anterior thoracic wall (posterior aspect). Diaphragm partly removed, posterior layer of rectus sheath fenestrated on both sides.

- 1 Sternocleidomastoid muscle (divided)
- 2 Clavicle
- 3 Sternothyroid muscle
- 4 Internal intercostal muscle
- 5 Transversus thoracic muscle
- 6 Intercostal arteries and nerves
- 7 Musculophrenic artery
- 8 Superior epigastric artery and vein
- 9 Diaphragm (divided)
- 10 Rectus abdominis muscle

- 11 Subclavian artery and brachial plexus
- 12 First rib
- 13 Internal thoracic artery and vein
- 14 Sternum
- 15 Innermost intercostal muscle
- 16 Intercostal artery and vein
- 17 Xiphoid process
- 18 Linea alba and posterior layer of rectus sheath
- 19 Transversus abdominis muscle

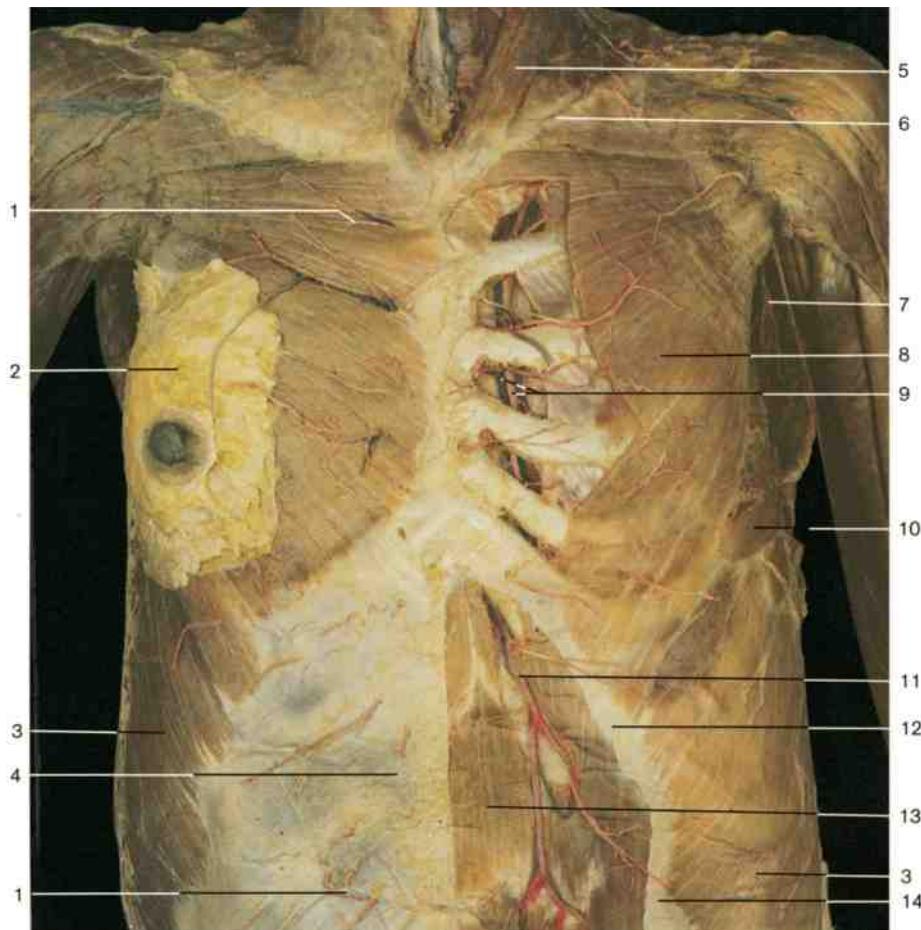

Thoracic wall (anterior aspect). Left pectoralis major muscle has been divided and reflected.
Note the connection of the cephalic vein with the subclavian vein.
Arrow: medial pectoral nerve.

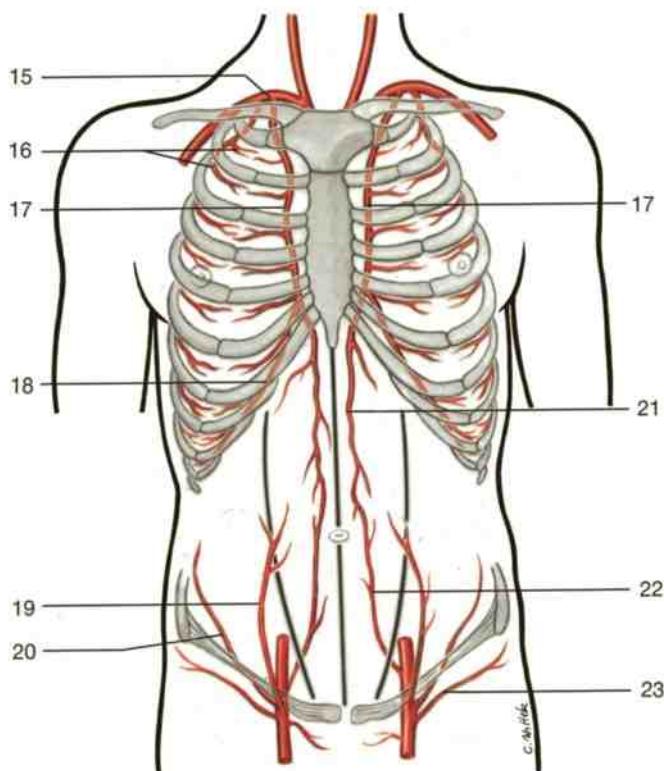

Thoracic wall (lateral aspect). Pectoralis major and minor muscles have been removed.
A section of the fourth rib has been cut and removed to display the intercostal vessels and nerve.

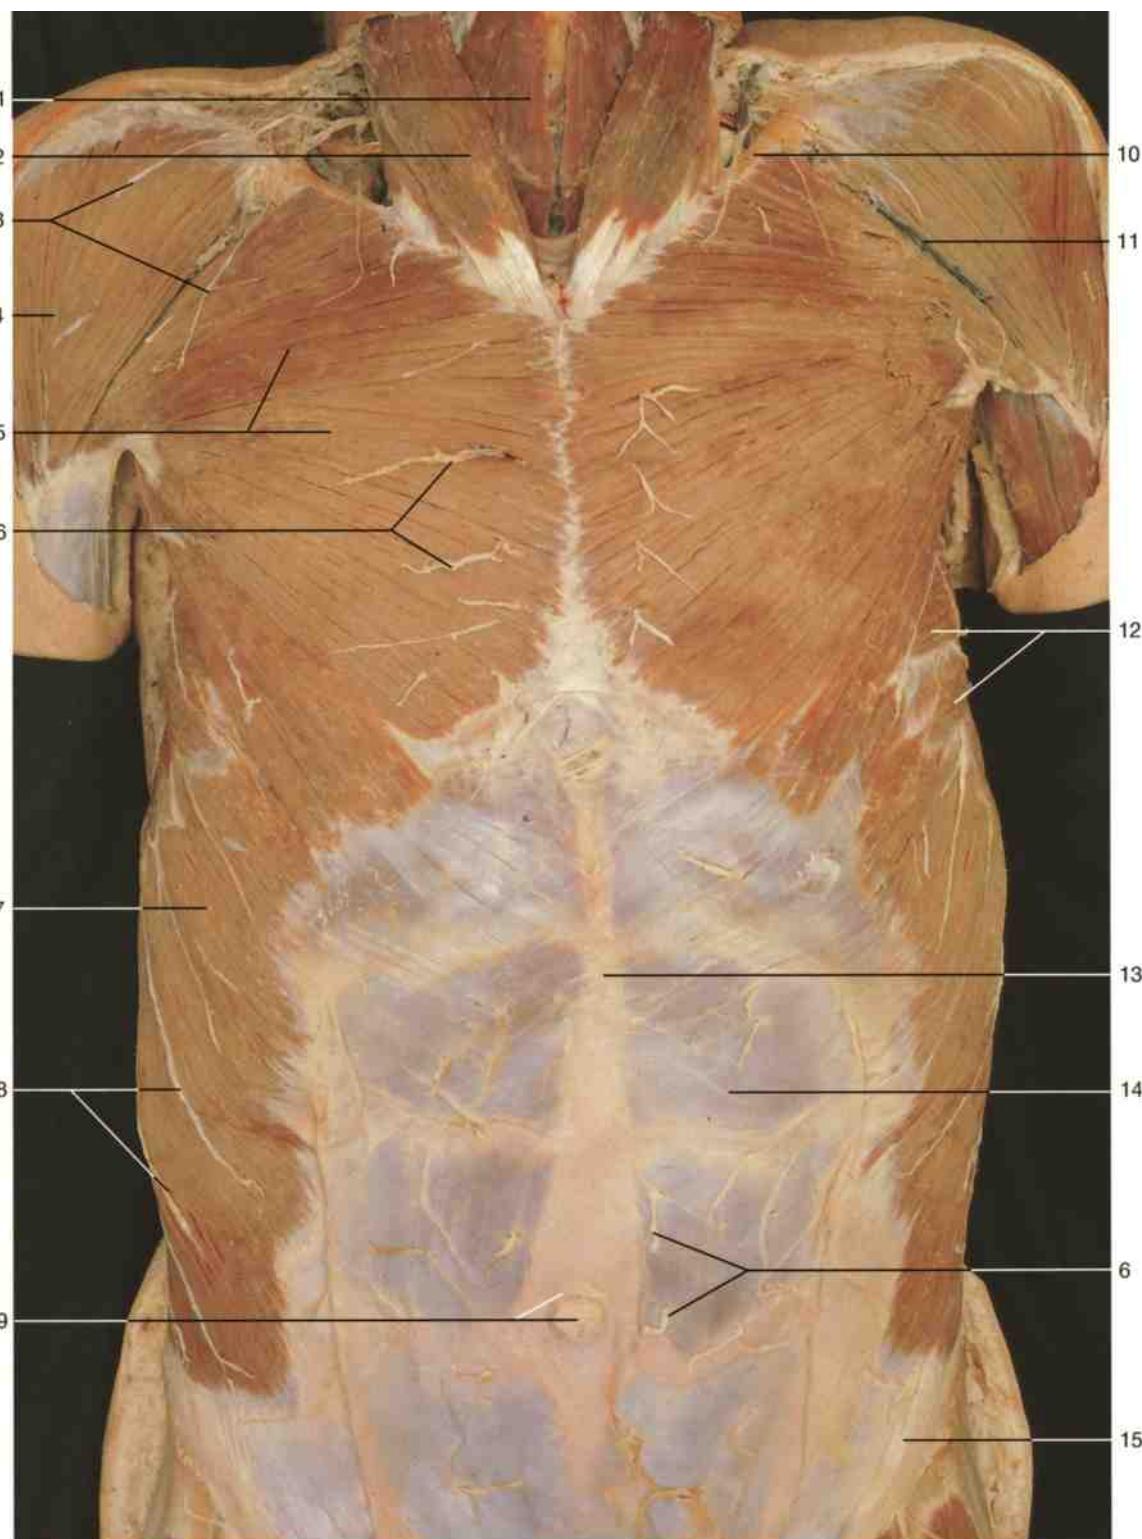

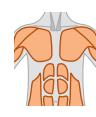

- 1 Mandible
- 2 Facial artery
- 3 Submandibular gland
- 4 Hyoid bone
- 5 Thyroid cartilage and sternohyoid muscle
- 6 Clavicle
- 7 Subclavius muscle
- 8 Second rib
- 9 Anterior cutaneous branches of intercostal nerves
- 10 External intercostal membrane
- 11 Parotid gland
- 12 External carotid artery
- 13 Sternocleidomastoid muscle and cutaneous branches of cervical plexus
- 14 Suprascapular nerves
- 15 Pectoralis major muscle and lateral pectoral nerves
- 16 Thoraco-acromial artery and subclavian vein
- 17 Pectoralis minor muscle
- 18 Median and ulnar nerve
- 19 Thoraco-epigastric vein
- 20 Cephalic vein and long head of biceps brachii muscle
- 21 Lateral thoracic artery and long thoracic nerve
- 22 Lateral cutaneous branches of intercostal nerve
- 23 Latissimus dorsi muscle
- 24 Median nerve
- 25 Axillary artery
- 26 Intercostobrachial nerves
- 27 Thoracodorsal nerve
- 28 Long thoracic nerve
- 29 Latissimus dorsi muscle
- 30 Serratus anterior muscle
- 31 Thoraco-acromial artery
- 32 Clavicle
- 33 External intercostal muscle
- 34 Third rib
- 35 Internal intercostal muscle
- 36 Anterior intercostal artery and vein, and intercostal nerve
- 37 Costal arch or margin

Thoracic wall (anterior aspect). Dissection of the **internal thoracic artery and vein**. Left pectoralis major muscle partly removed. Anterior lamina of the rectus sheath on the left side has been removed.

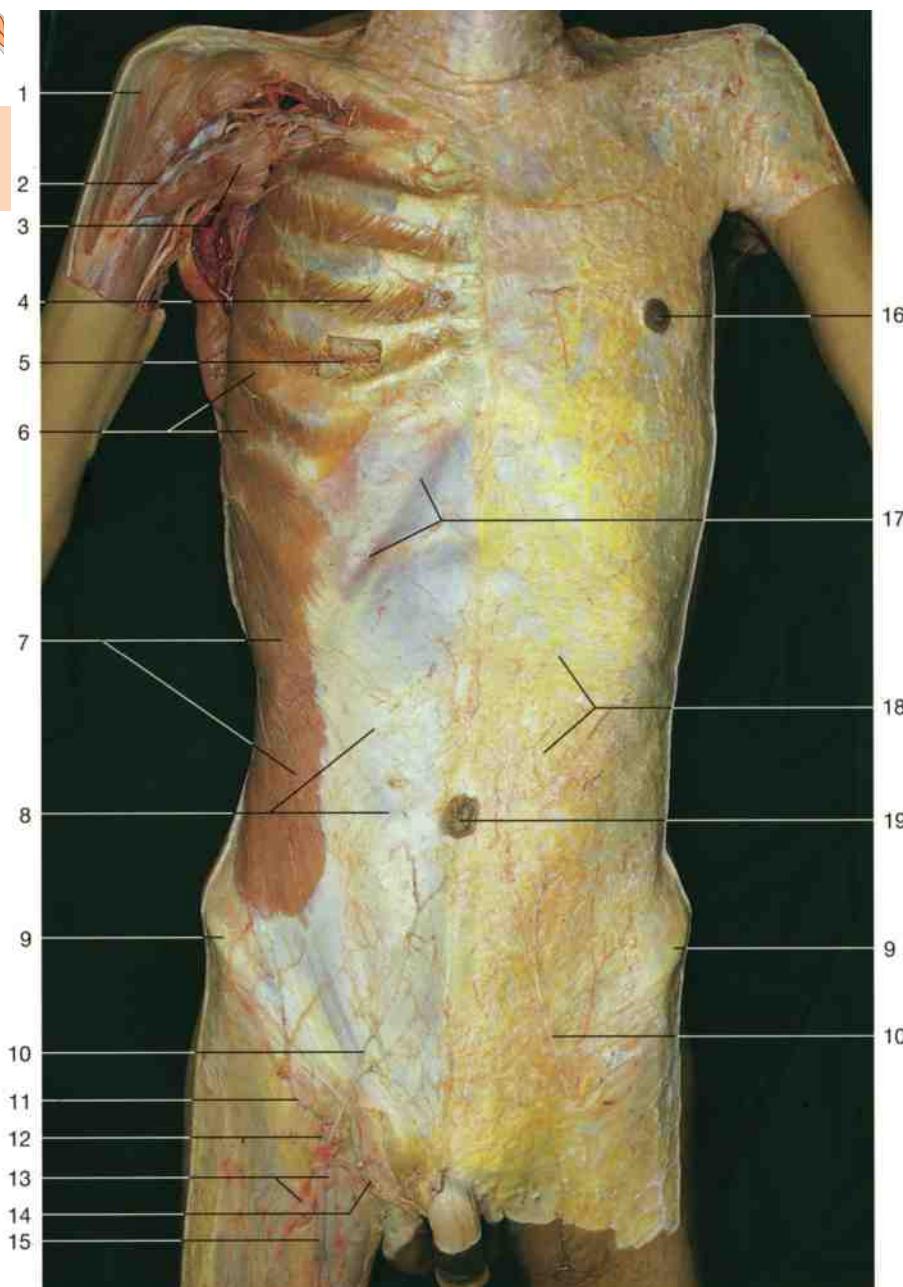

Main arteries of thoracic and abdominal walls.

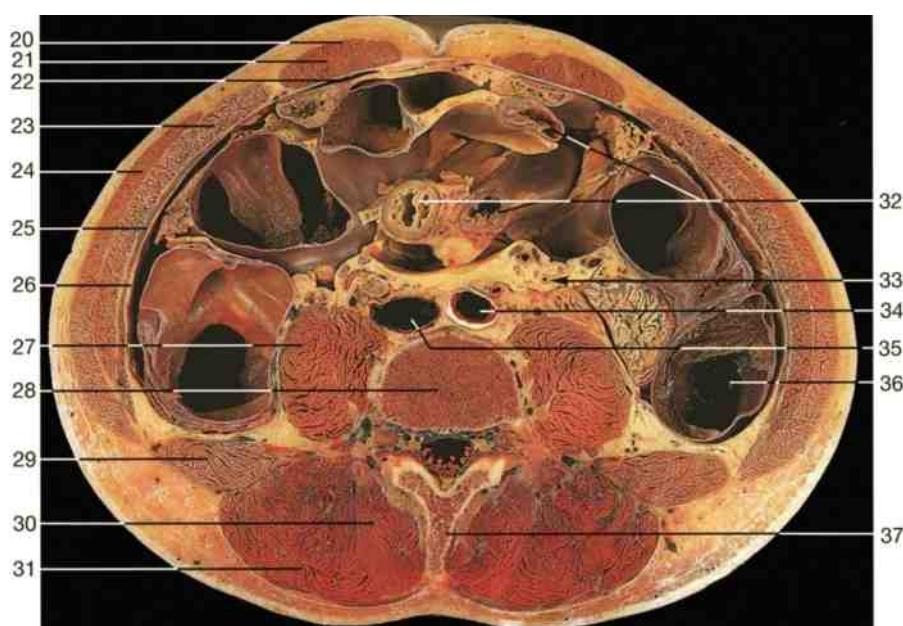

Anterior thoracic and abdominal walls with superficial muscles. The fascia of pectoralis major muscle and the abdominal wall have been removed; the anterior layer of the sheath of the rectus abdominis muscle is displayed.

- 31 Internal abdominal oblique muscle

Thoracic and abdominal walls. Right pectoralis major and minor muscles and anterior layer of rectus sheath have been removed on the right side.

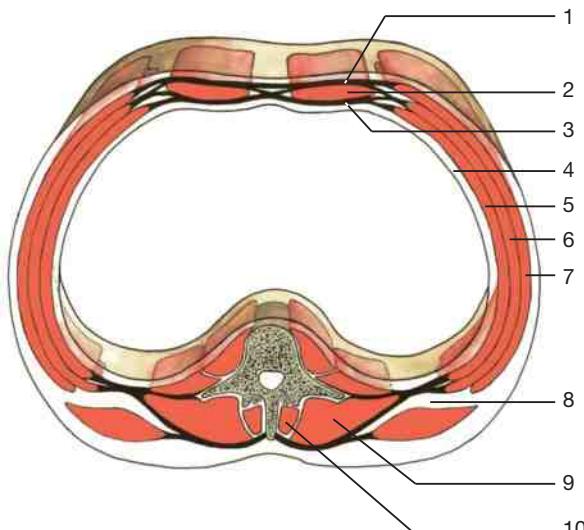

Horizontal section through the body at the level of fourth lumbar vertebra; seen from below. (CT scan.)

- 1 Costal margin
- 2 Rectus abdominis muscle
- 3 External abdominal oblique muscle (reflected)
- 4 Thoraco-abdominal (intercostal) nerves with accompanying vessels
- 5 Internal abdominal oblique muscle
- 6 Arcuate line (arrow)
- 7 Inferior epigastric artery and vein
- 8 Ilio-inguinal nerve
- 9 Position of deep inguinal ring
- 10 Superficial inguinal lymph nodes
- 11 Great saphenous vein
- 12 Linea alba
- 13 Iliohypogastric nerve
- 14 Pyramidal muscle
- 15 Spermatic cord
- 16 Fundiform ligament of penis

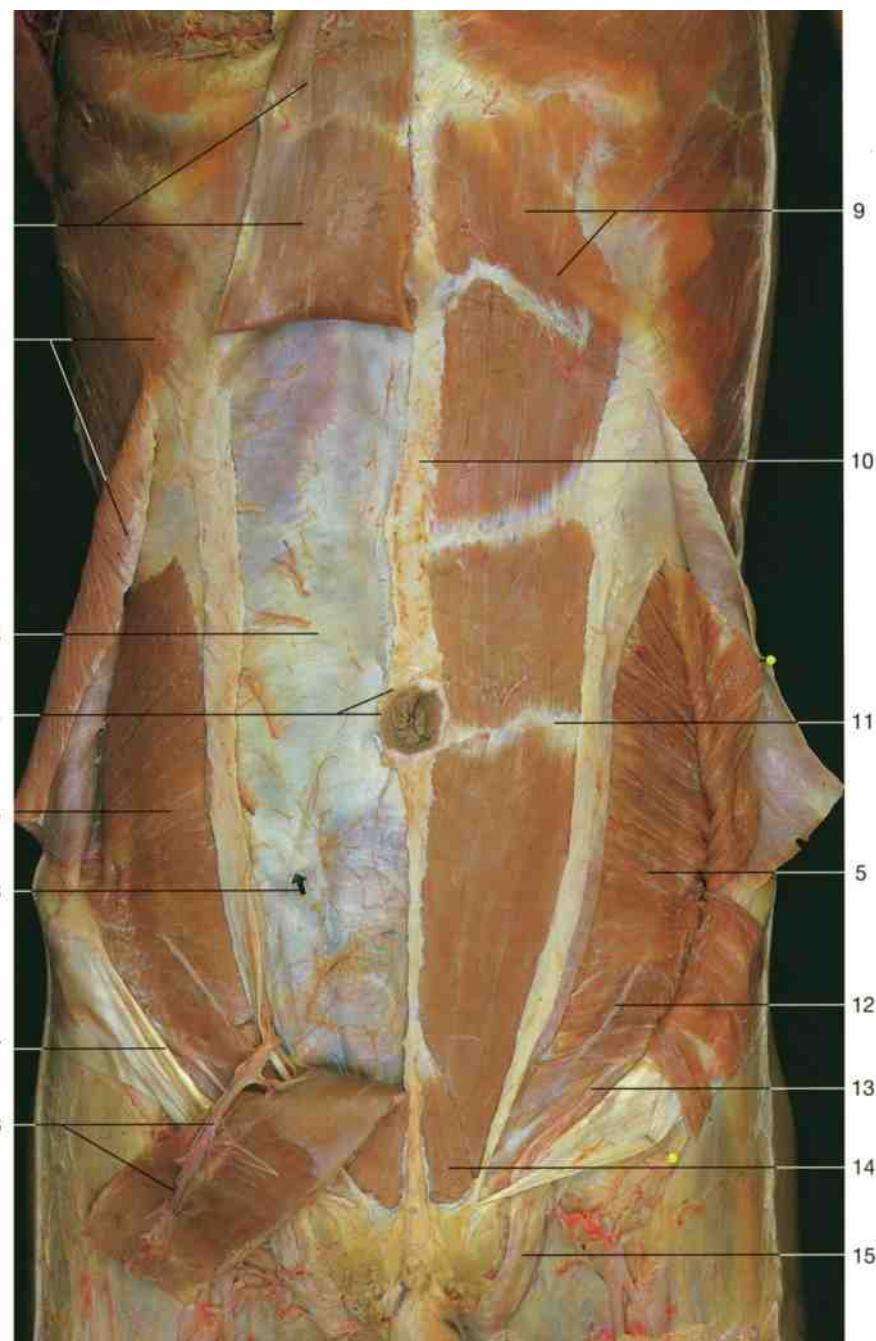

Thoracic and abdominal walls.

External abdominal oblique muscle has been divided and reflected on both sides. The right rectus muscle has been reflected medially to display the posterior layer of rectus sheath. Arrow: location of arcuate line.

- 1 Anterior layer of rectus sheath
- 2 Rectus abdominis muscle
- 3 Posterior layer of rectus sheath
- 4 Transversalis fascia
- 5 Transversus abdominis muscle
- 6 Internal oblique muscle
- 7 External oblique muscle
- 8 Thoracolumbar fascia with superficial and deep layer
- 9 Lateral column of erector spinae muscle
- 10 Medial column of intrinsic muscles of the back

Horizontal section of the trunk superior to arcuate line (schematic drawing).

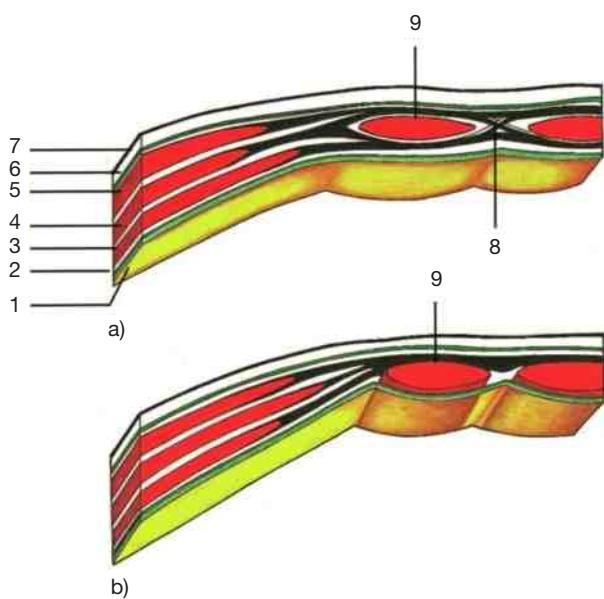

- 1 Rectus abdominis muscle (reflected)
- 2 External abdominal oblique muscle (divided)
- 3 Posterior layer of rectus sheath
- 4 Umbilical ring
- 5 Internal abdominal oblique muscle
- 6 Arcuate line (arrow)
- 7 Inguinal ligament
- 8 Inferior epigastric artery and vein and rectus abdominis muscle (divided and reflected)

- 10 Linea alba
- 11 Tendinous intersection
- 12 Iliohypogastric nerve
- 13 Ilio-inguinal nerve
- 14 Pyramidal muscle
- 15 Spermatic cord

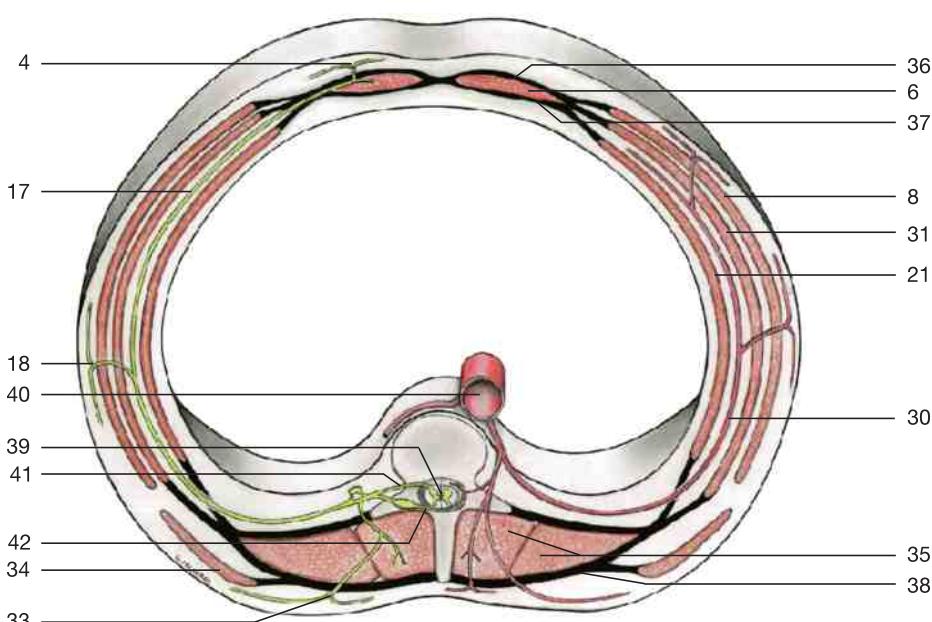

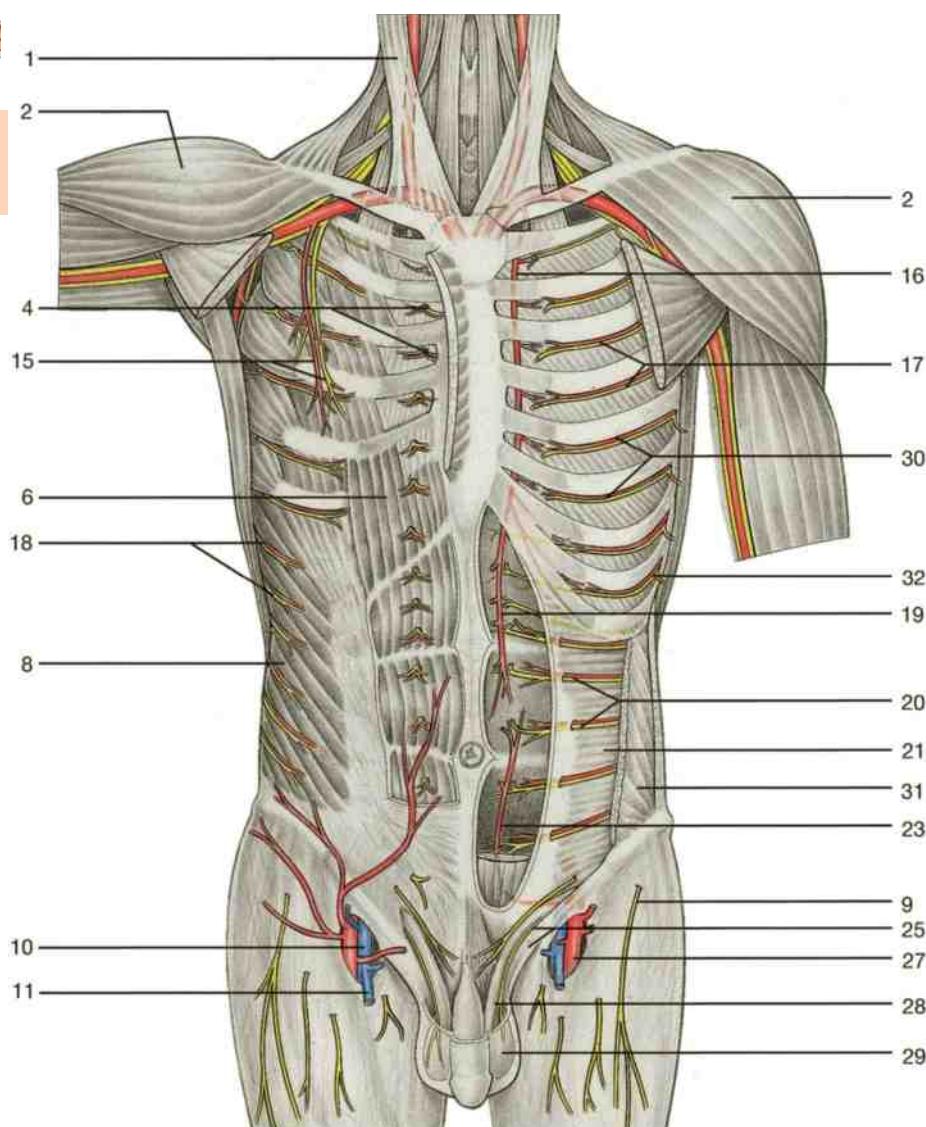

Thoracic and abdominal walls.

External abdominal oblique muscle has been divided and reflected on both sides. The right rectus muscle has been cut and reflected to display the posterior layer of rectus sheath. Arrow: location of arcuate line.

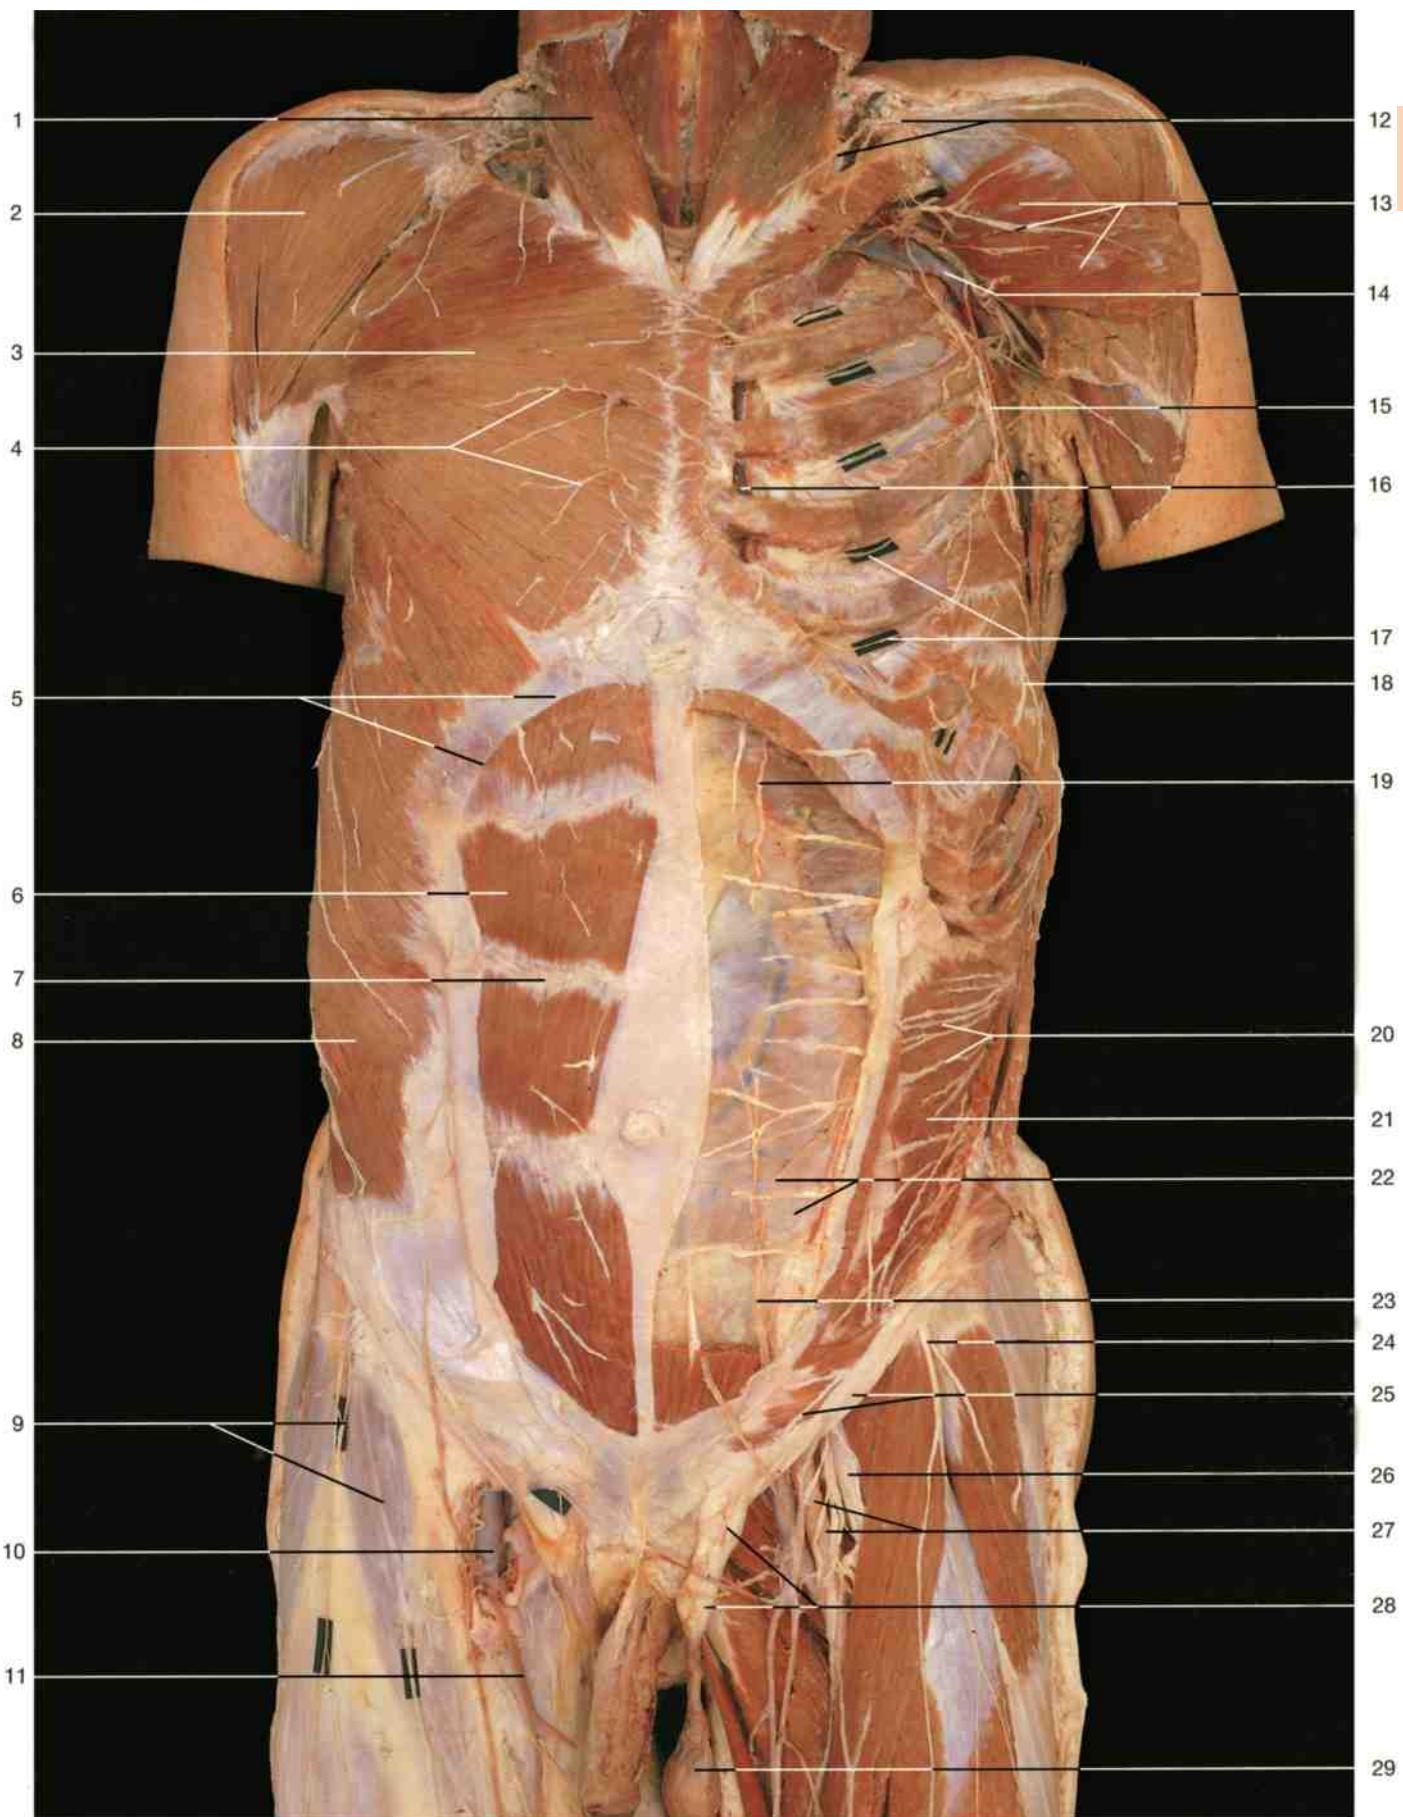

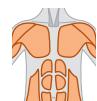

- 1 Peritoneum
- 2 Transversalis fascia (green)
- 3 Transversus abdominis muscle
- 4 Internal abdominal oblique muscle
- 5 External abdominal oblique
- 6 Fascia of external abdominal oblique muscle (green)
- 7 Skin
- 8 Linea alba
- 9 Rectus abdominis muscle

Transverse sections through the abdominal wall superior (a) and inferior (b) to arcuate line.

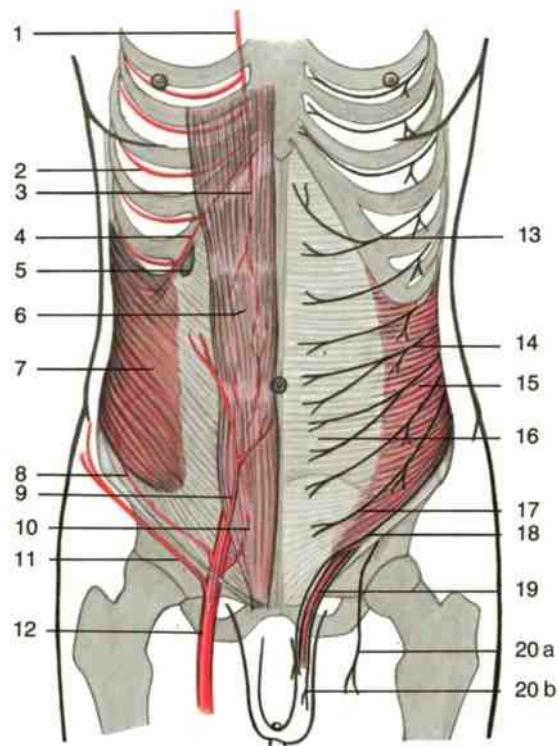

Horizontal section of the abdominal wall (from below) showing the location of the intercostal arteries (left side) and nerves (right side).

Thoracic and abdominal walls with vessels and nerves (anterior aspect). Right side: superficial layers; left side: deeper layers. Pectoralis major and minor muscles, the external and internal intercostal muscles on the left side have been removed to display the intercostal nerves. The anterior layer of rectus sheath, the left rectus abdominis muscle, and the external and internal abdominal oblique muscles have been removed to show the thoraco-abdominal nerves within the abdominal wall.

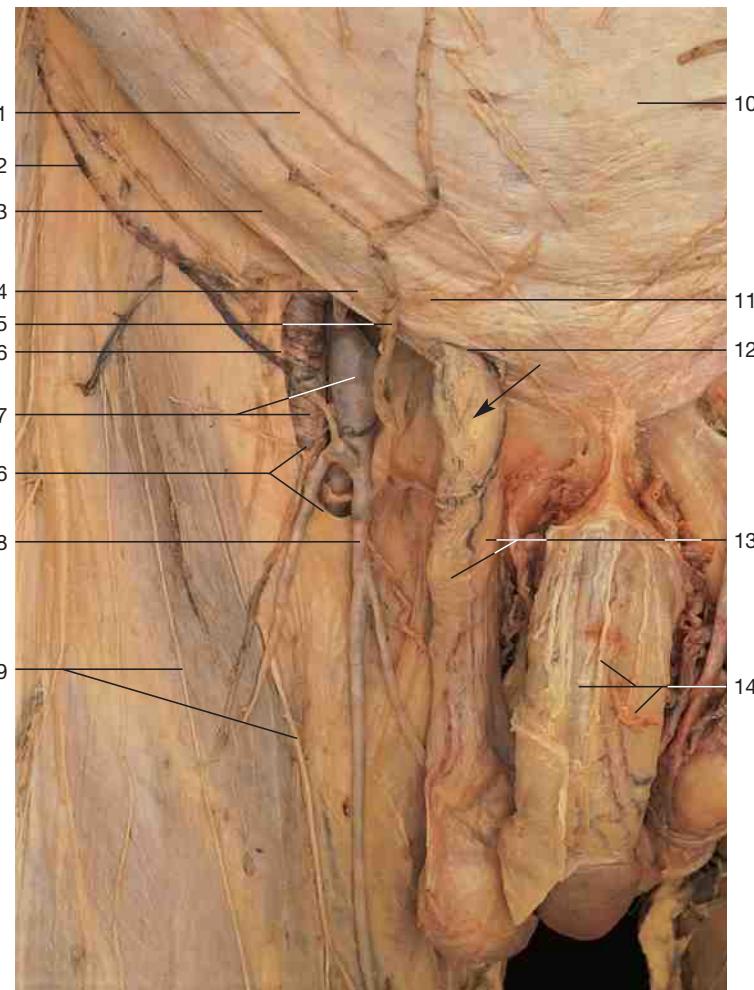

Abdominal wall with vessels and nerves. The left rectus abdominis muscle has been divided and reflected to display the inferior epigastric vessels. The left internal abdominal oblique muscle has been removed to show the thoraco-abdominal nerves.

Arteries and nerves that supply the thoracic and abdominal walls.
Note their segmental arrangement (schematic drawing).

- 1 Rectus abdominis muscle
- 2 Tendinous intersection
- 3 Internal abdominal oblique muscle
- 4 External abdominal oblique muscle (reflected)
- 5 Anterior superior iliac spine
- 6 Ilio-inguinal nerve
- 7 Spermatic cord
- 8 Costal margin
- 9 Superior epigastric artery
- 10 Thoraco-abdominal (intercostal) nerves
- 11 Posterior layer of rectus sheath
- 12 Transversus abdominis muscle
- 13 Semilunar line
- 14 Arcuate line
- 15 Inferior epigastric artery
- 16 Inguinal ligament

- 1 Internal thoracic artery
- 2 Intercostal artery
- 3 Superior epigastric artery
- 4 Musculophrenic artery
- 5 Gallbladder
- 6 Rectus abdominis muscle
- 7 External abdominal oblique muscle
- 8 Deep circumflex iliac artery
- 9 Superficial epigastric artery
- 10 Inferior epigastric artery
- 11 Superficial circumflex iliac artery
- 12 Femoral artery
- 13 Intercostal nerve
- 14 Thoraco-abdominal nerve (T_{10})
- 15 Transversus abdominis muscle
- 16 Posterior layer of the rectus sheath
- 17 Iliohypogastric nerve (L_1)
- 18 Ilio-inguinal nerve (L_1)
- 19 Spermatic cord
- 20 Genitofemoral nerve (L_1, L_2)
 - a Femoral branch
 - b Genital branch

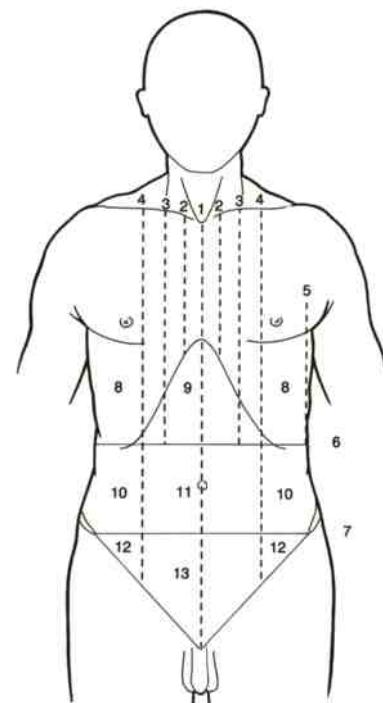

Inguinal canal in the male, right side (superficial layer, anterior aspect).
There is a small inguinal hernia (arrow).

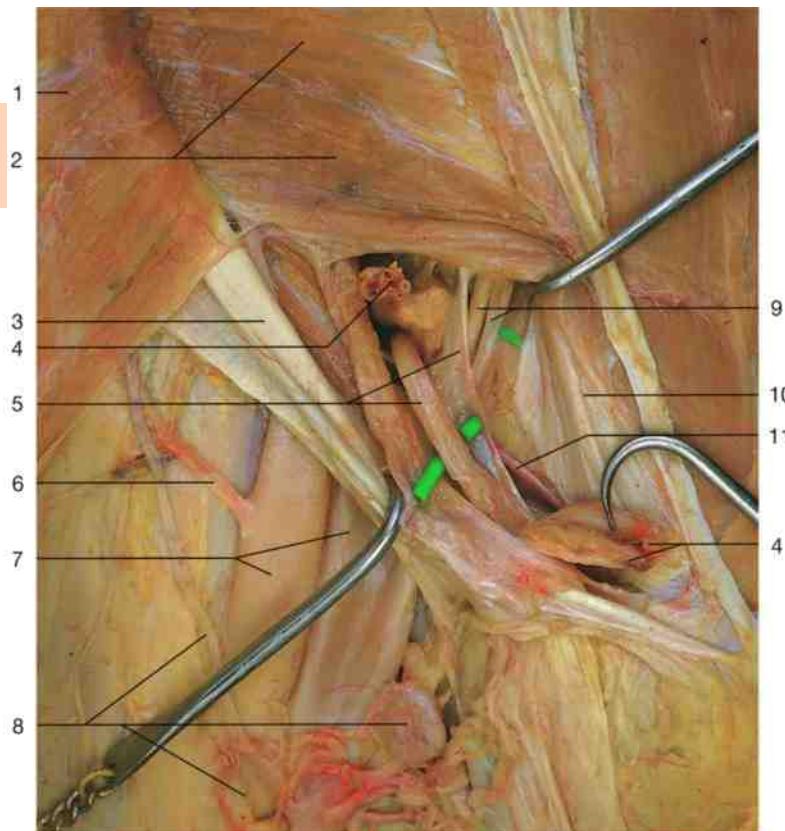

Inguinal canal in the male, right side (anterior aspect). The external abdominal oblique muscle has been divided to display the inguinal canal.

- 1 Aponeurosis of external abdominal oblique muscle
- 2 Superficial circumflex iliac vein
- 3 Inguinal ligament
- 4 Lateral crus of inguinal ring
- 5 Superficial epigastric vein
- 6 Saphenous opening
- 7 Femoral artery and vein
- 8 Great saphenous vein
- 9 Anterior cutaneous branches of femoral nerve
- 10 Anterior layer of rectus sheath
- 11 Intercrural fibers
- 12 Superficial inguinal ring
- 13 Spermatic cord and genital branch of genitofemoral nerve
- 14 Penis with dorsal nerves and deep dorsal vein of penis
- 15 Aponeurosis of external abdominal oblique muscle (divided and reflected)
- 16 Internal abdominal oblique muscle
- 17 Ilio-inguinal nerve
- 18 Anterior cutaneous branches of iliohypogastric nerve
- 19 Superficial external pudendal veins

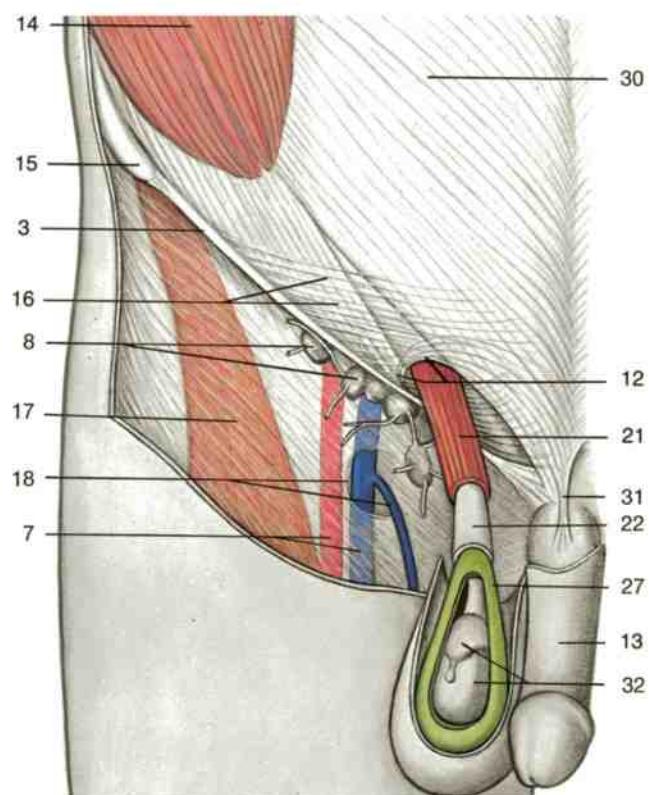

Regions and reference lines for delineating surface projections.

- 1 Median line
- 2 Lateral sternal line
- 3 Parasternal line
- 4 Midclavicular line
- 5 Axillary line
- 6 Transpyloric plane
- 7 Transtubercular plane
- 8 Hypochondriac region
- 9 Epigastric region
- 10 Lumbar region
- 11 Umbilical region
- 12 Iliac region
- 13 Hypogastric region

Inguinal canal in the male, right side (deep layer, anterior aspect).
Spermatic cord with exception of ductus deferens (probe) has been divided and reflected.

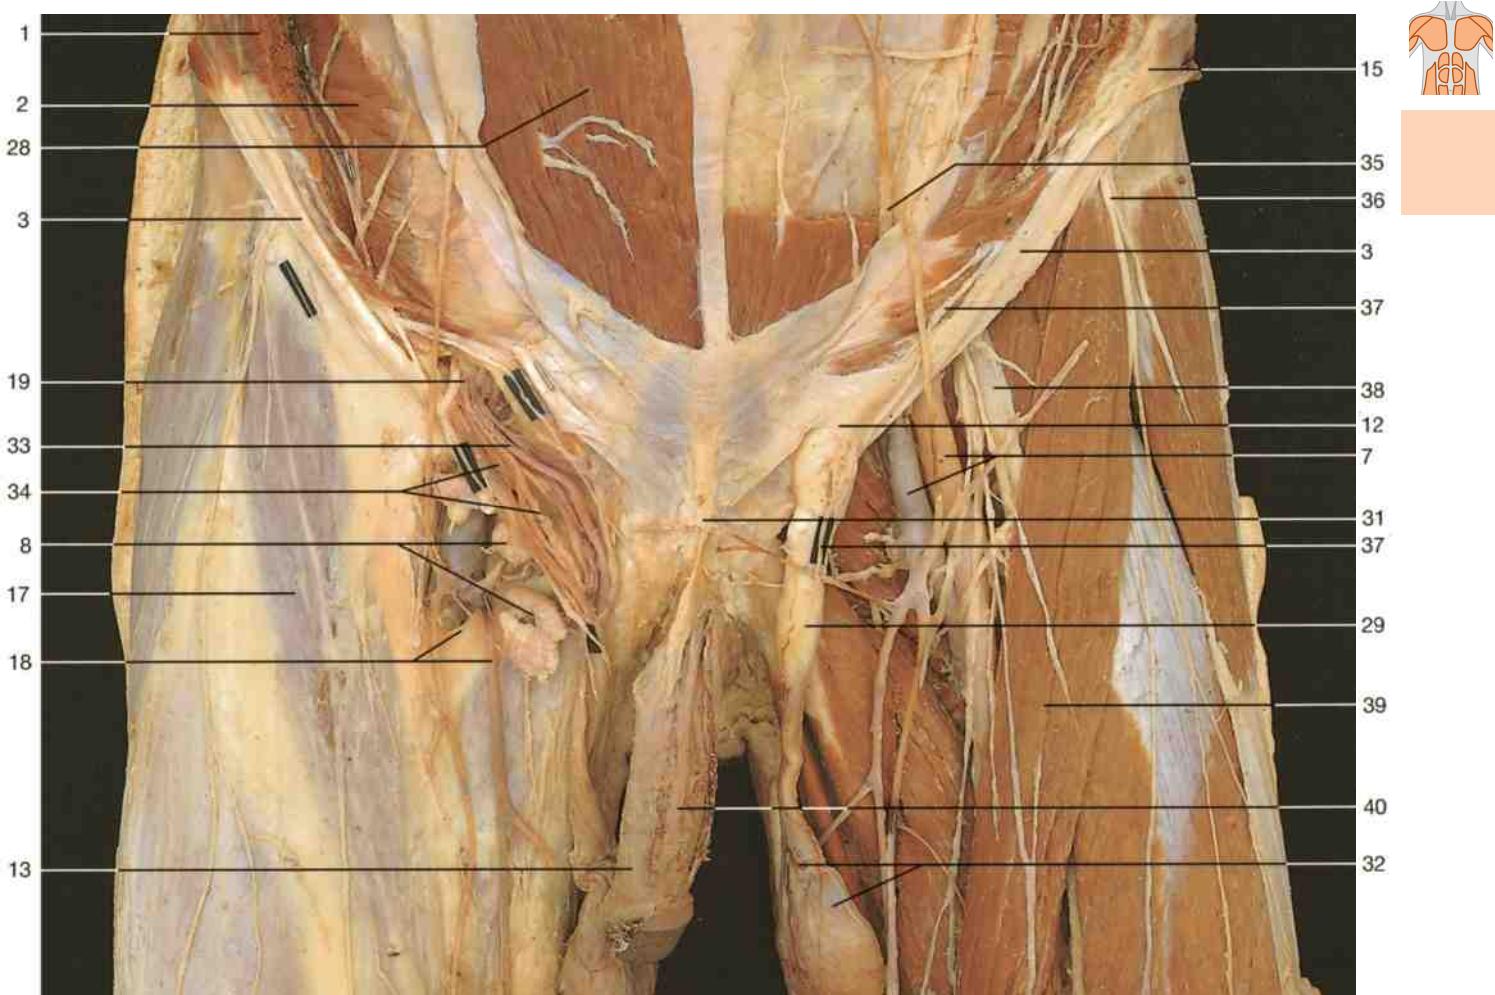

General characteristics of lower part of anterior abdominal wall and inguinal canal (schematic drawing).

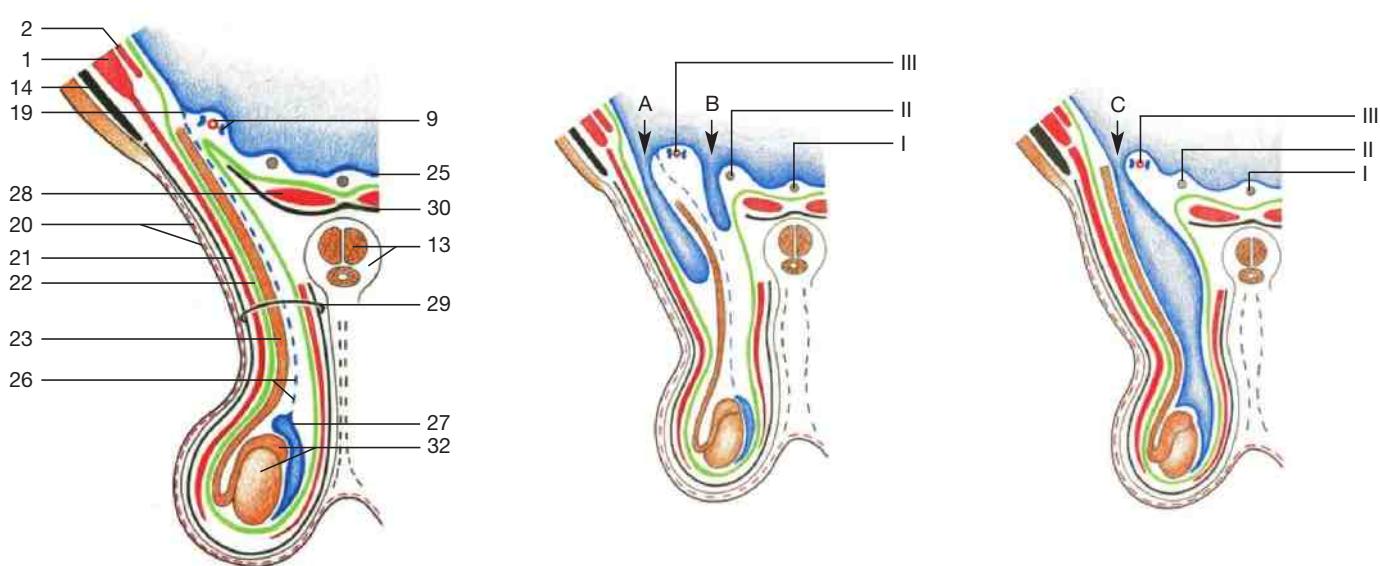

- 1 Internal abdominal oblique muscle (reflected)
- 2 Transversus abdominis muscle
- 3 Inguinal ligament
- 4 Spermatic cord with the exception of the ductus deferens (divided and reflected)
- 5 Ductus deferens and interfoveolar ligament
- 6 Superficial circumflex iliac artery
- 7 Femoral artery and vein
- 8 Superficial inguinal lymph nodes and inguinal lymph vessel
- 9 Inferior epigastric artery and vein
- 10 Falx inguinale or conjoint tendon (cut)
- 11 Pubic branch of inferior epigastric artery
- 12 Superficial inguinal ring
- 13 Penis
- 14 External abdominal oblique muscle
- 15 Anterior superior iliac spine
- 16 Intercrural fibers
- 17 Fascia lata and sartorius muscle
- 18 Saphenous opening and great saphenous vein
- 19 Deep inguinal ring
- 20 Skin of scrotum and dartos muscle
- 21 Cremaster muscle
- 22 Internal spermatic fascia
- 23 Ductus deferens
- 24 Epididymis
- 25 Peritoneum (blue)
- 26 Remnant of processus vaginalis
- 27 Tunica vaginalis testis
- 28 Rectus abdominis muscle
- 29 Spermatic cord with ductus deferens covered by external spermatic fascia
- 30 Anterior layer of rectus sheath
- 31 Suspensory ligament of penis
- 32 Testis and epididymis
- 33 Ductus deferens
- 34 Pampiniform venous plexus and testicular artery
- 35 Inferior epigastric artery
- 36 Lateral femoral cutaneous nerve
- 37 Ilio-inguinal nerve
- 38 Femoral nerve
- 39 Sartorius muscle
- 40 Deep dorsal vein of penis

Inguinal hernias may either pass through the inguinal canal lateral to the inferior epigastric artery (indirect or lateral inguinal hernias, A and C) or directly penetrate the abdominal wall through the inguinal triangle located medial to the inferior epigastric artery (direct or medial inguinal hernias, B). The lateral hernias can be congenital if the vaginal process remains open (C) or acquired (A) if the hernia develops independently of a patent processus vaginalis.

Femoral hernias generally protrude through the femoral ring below the inguinal ligament. Proper assessment of the site of herniation requires the identification of both the inguinal ligament and the epigastric artery.

Inguinal and femoral regions in the male (anterior aspect). On the right, the spermatic cord was dissected to display the ductus deferens and the accompanying vessels and nerves. The fascia lata on the left side has been removed.

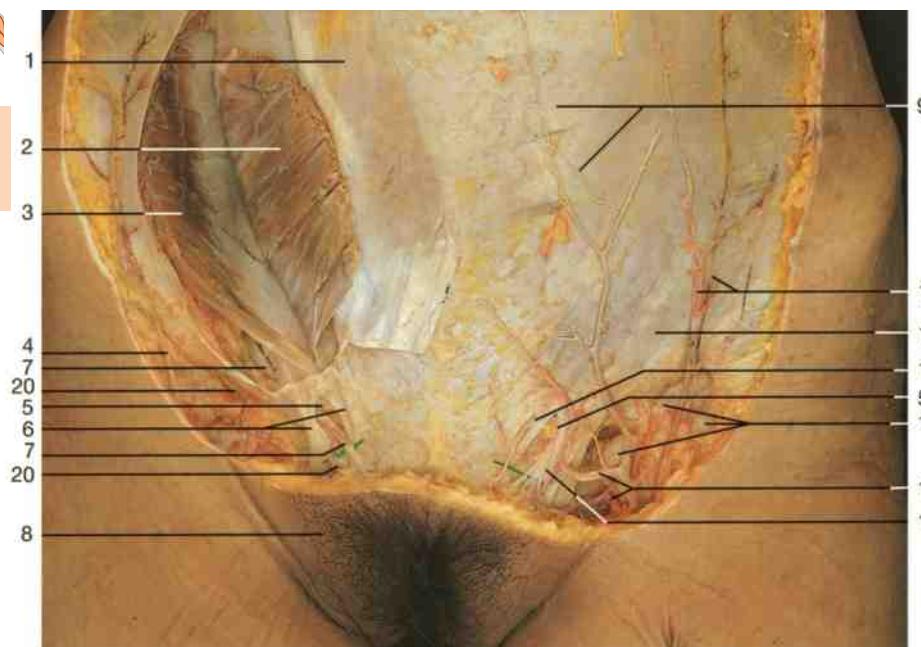

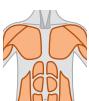

Layers of spermatic cord and types of hernias. Left: normal situation. Middle: location of acquired inguinal hernias:

A = indirect; B = direct inguinal hernia. Right: congenital indirect inguinal hernia (C); the vaginal process remained open.

I = median umbilical fold containing urachus chord.

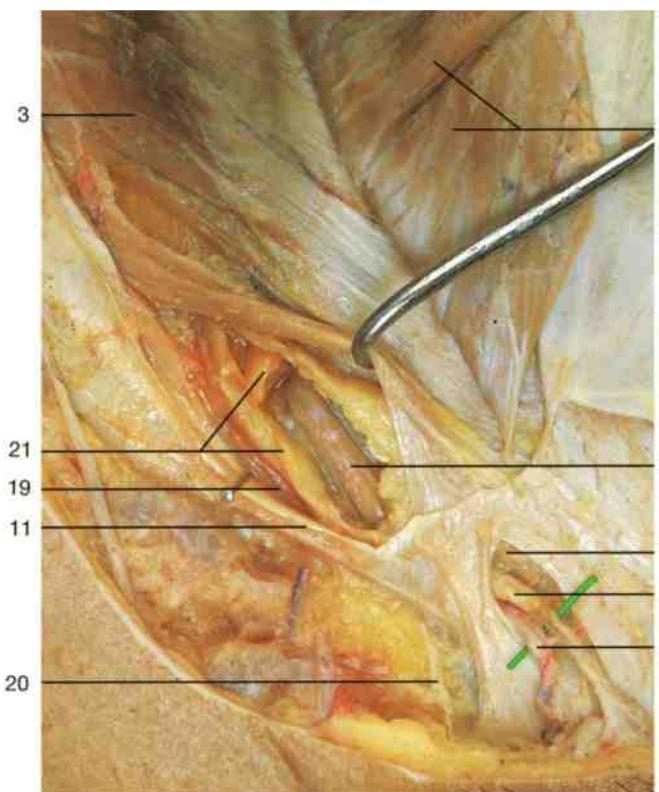

II = medial umbilical fold with remnants of umbilical artery.

III = lateral umbilical fold with inferior epigastric artery and vein.

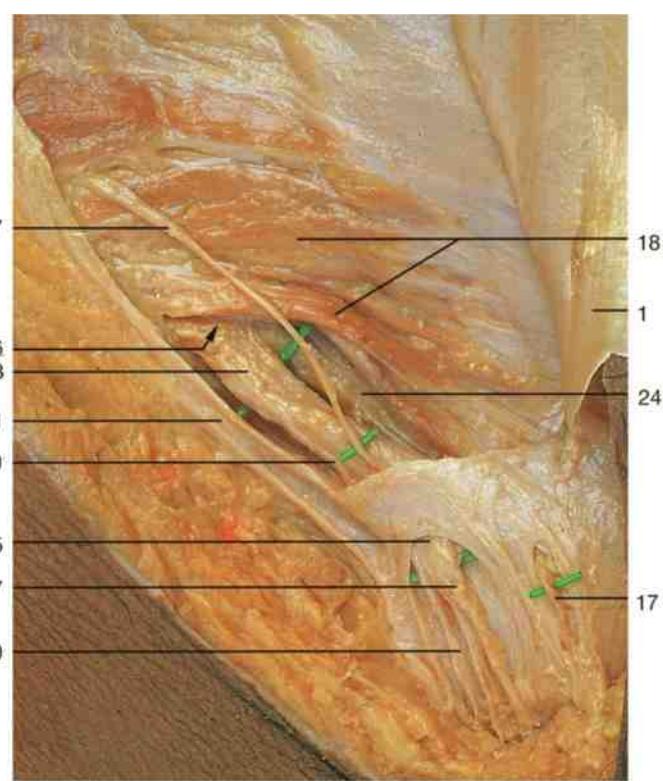

Inguinal region in the female (anterior aspect). Left side: superficial layer; right side: external and internal abdominal oblique muscle divided and reflected.

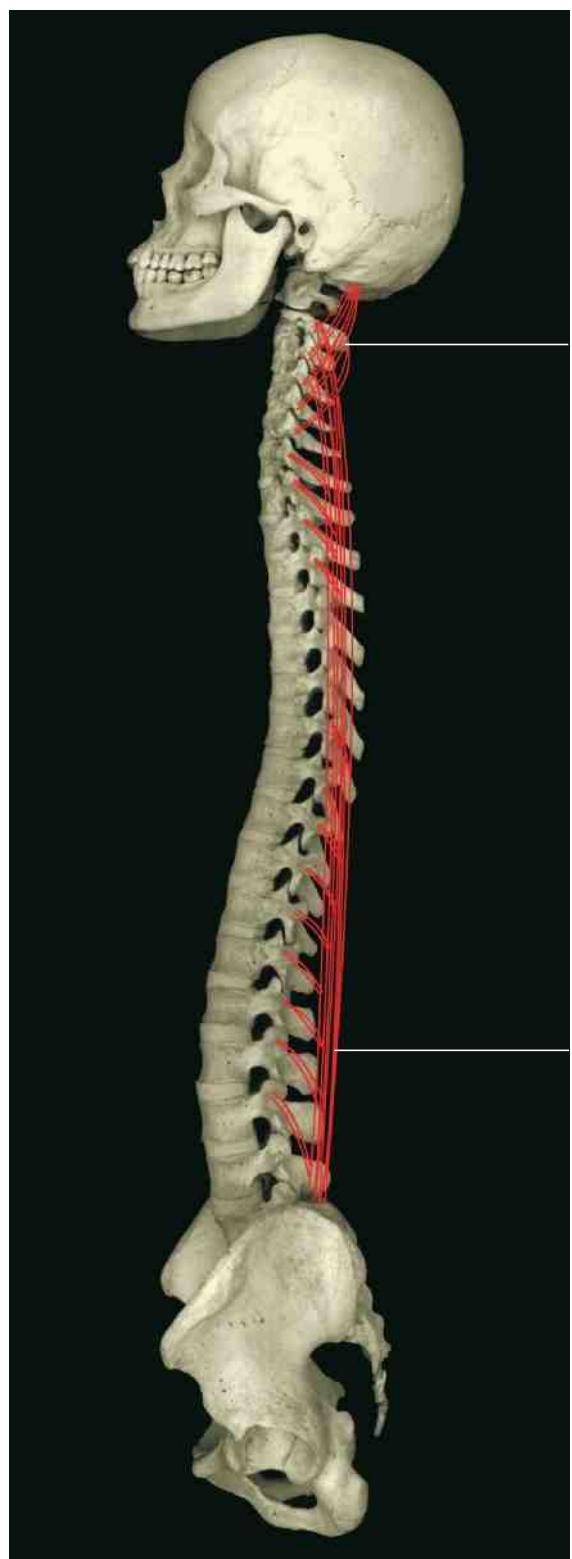

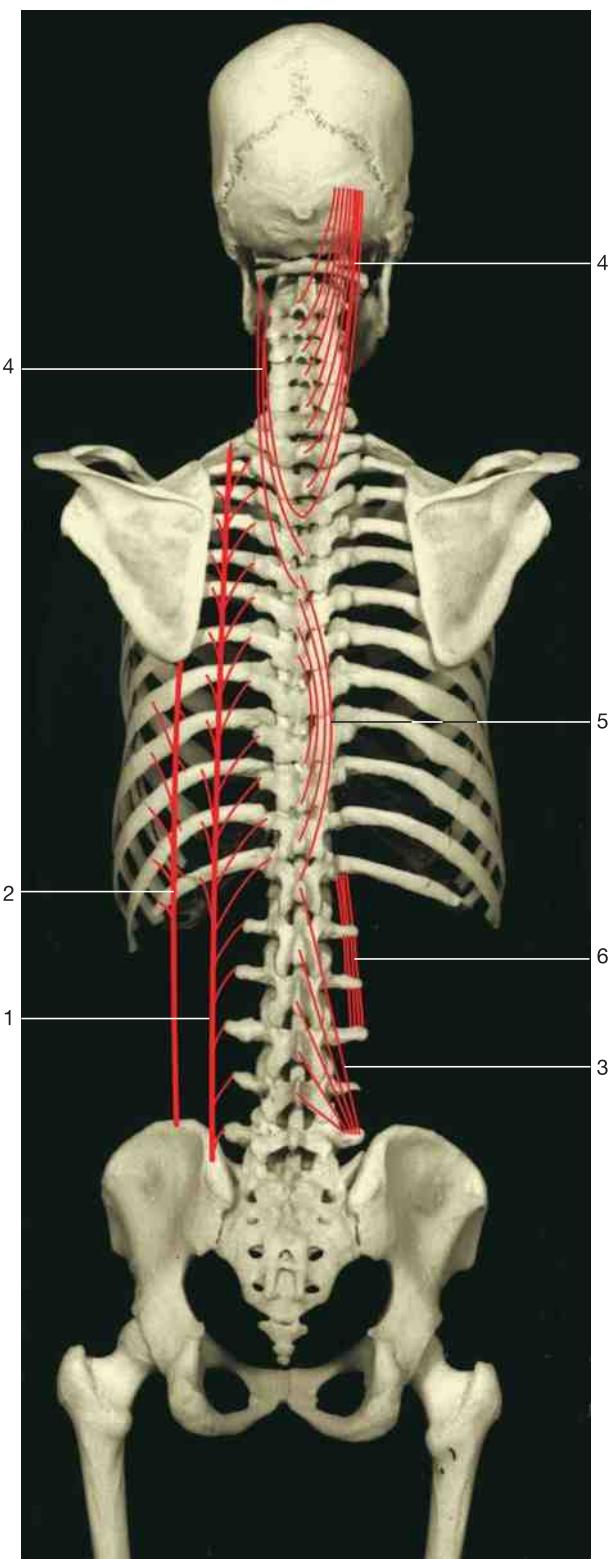

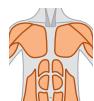

- 1 Aponeurosis of external abdominal oblique muscle
- 2 Internal abdominal oblique muscle (divided and reflected)
- 3 Transversus abdominis muscle
- 4 Superficial circumflex iliac artery and vein
- 5 Superficial inguinal ring with fat pad
- 6 Medial and lateral crural fibers
- 7 Round ligament (ligamentum teres uteri)
- 8 Labium majus pudendi
- 9 Anterior layer of rectus sheath
- 10 Superficial epigastric artery and vein
- 11 Inguinal ligament
- 12 Cutaneous branch of ilio-inguinal nerve
- 13 Superficial inguinal lymph nodes
- 14 Entrance of round ligament into the labium majus
- 15 External pudendal artery and vein
- 16 Position of deep inguinal ring
- 17 Ilio-inguinal nerve
- 18 Internal abdominal oblique muscle
- 19 Pubic branch of inferior epigastric artery
- 20 Genital branch of genitofemoral nerve
- 21 Fat pad of inguinal canal
- 22 Ilio-inguinal nerve
- 23 Sheath of round ligament (inguinal canal)
- 24 Transversalis fascia

Inguinal canal of the female (anterior aspect, right side). The external abdominal oblique muscle has been divided and reflected, to display the ilio-inguinal nerve and the round ligament.

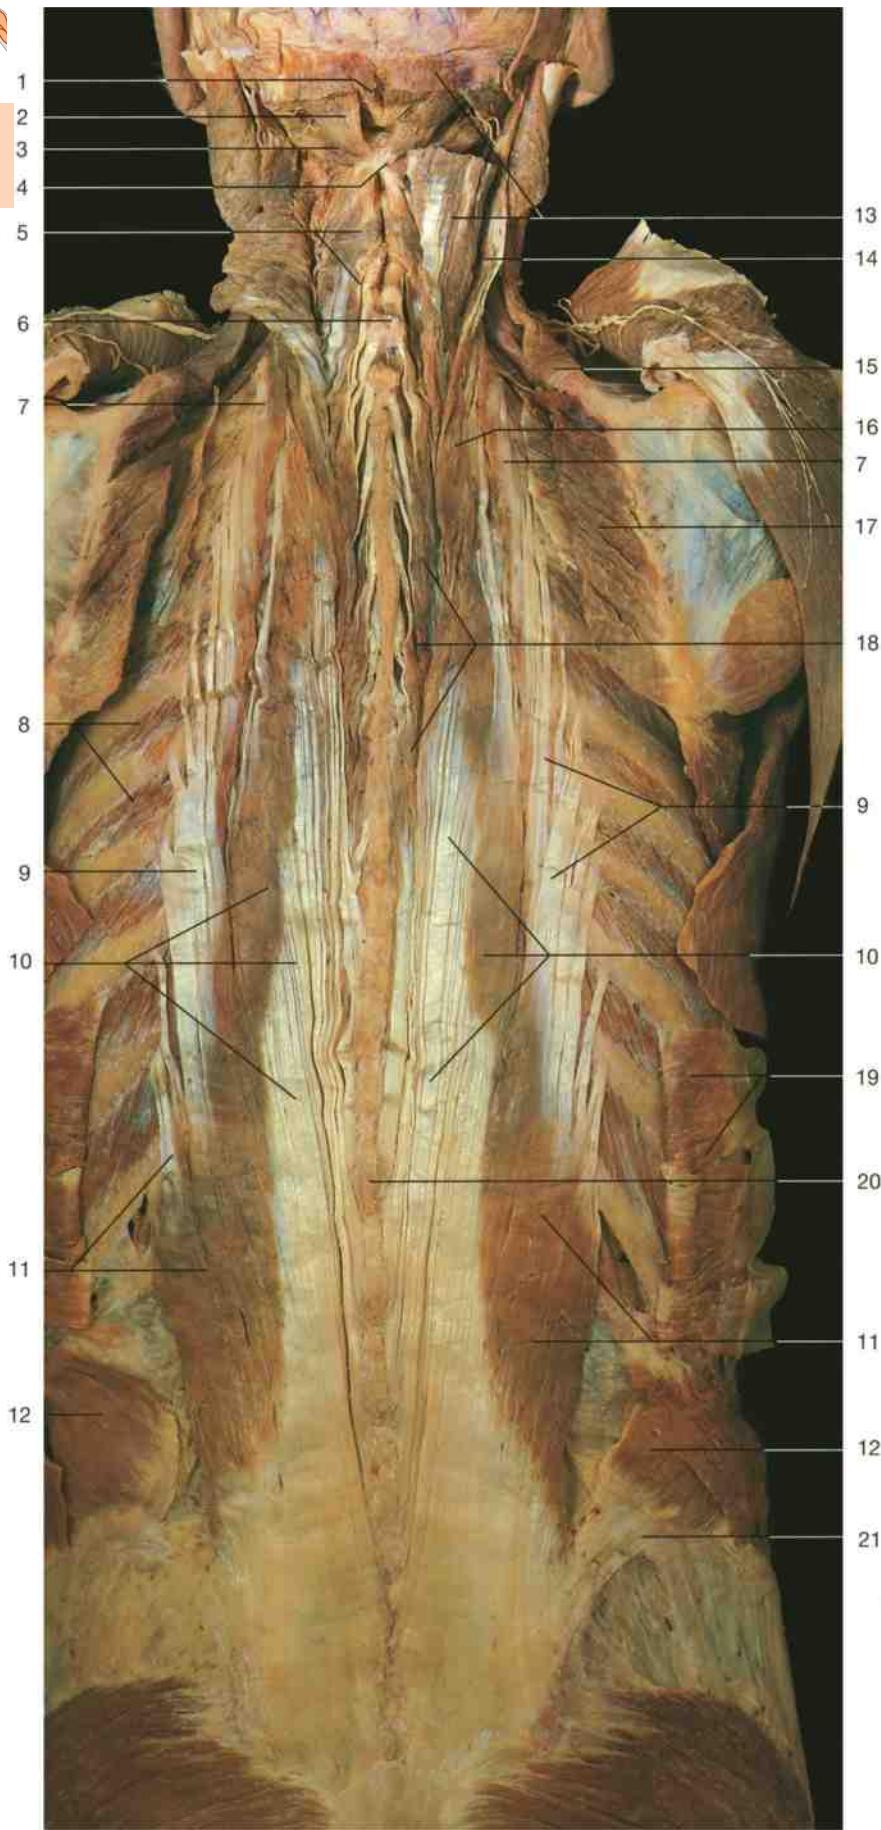

Inguinal canal of the female (anterior aspect, right side). The external and internal abdominal oblique muscle have been divided and reflected to show the content of the inguinal canal.

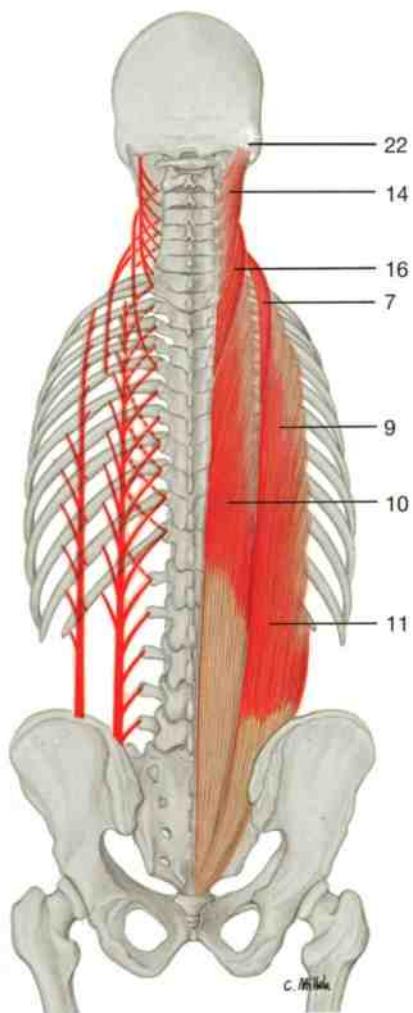

Skeleton of the trunk (dorsal and lateral aspect).

The long muscles of the back [longissimus (1) and iliocostalis (2) muscles] originate at the sacrum and pelvis and insert at the spinous or transverse processes of the vertebrae or at the ribs. There are also muscles that insert at the occipital bone.

The long muscles form the lateral tract, whereas muscles of the medial tract are situated within the groove between the spinous and transverse processes of the vertebrae [transversospinal (3) and spinotransversal (4) muscles] or between the spinous processes [spinalis muscles (5)] or between the transverse processes [intertransversarii muscles (6)] of the vertebrae.

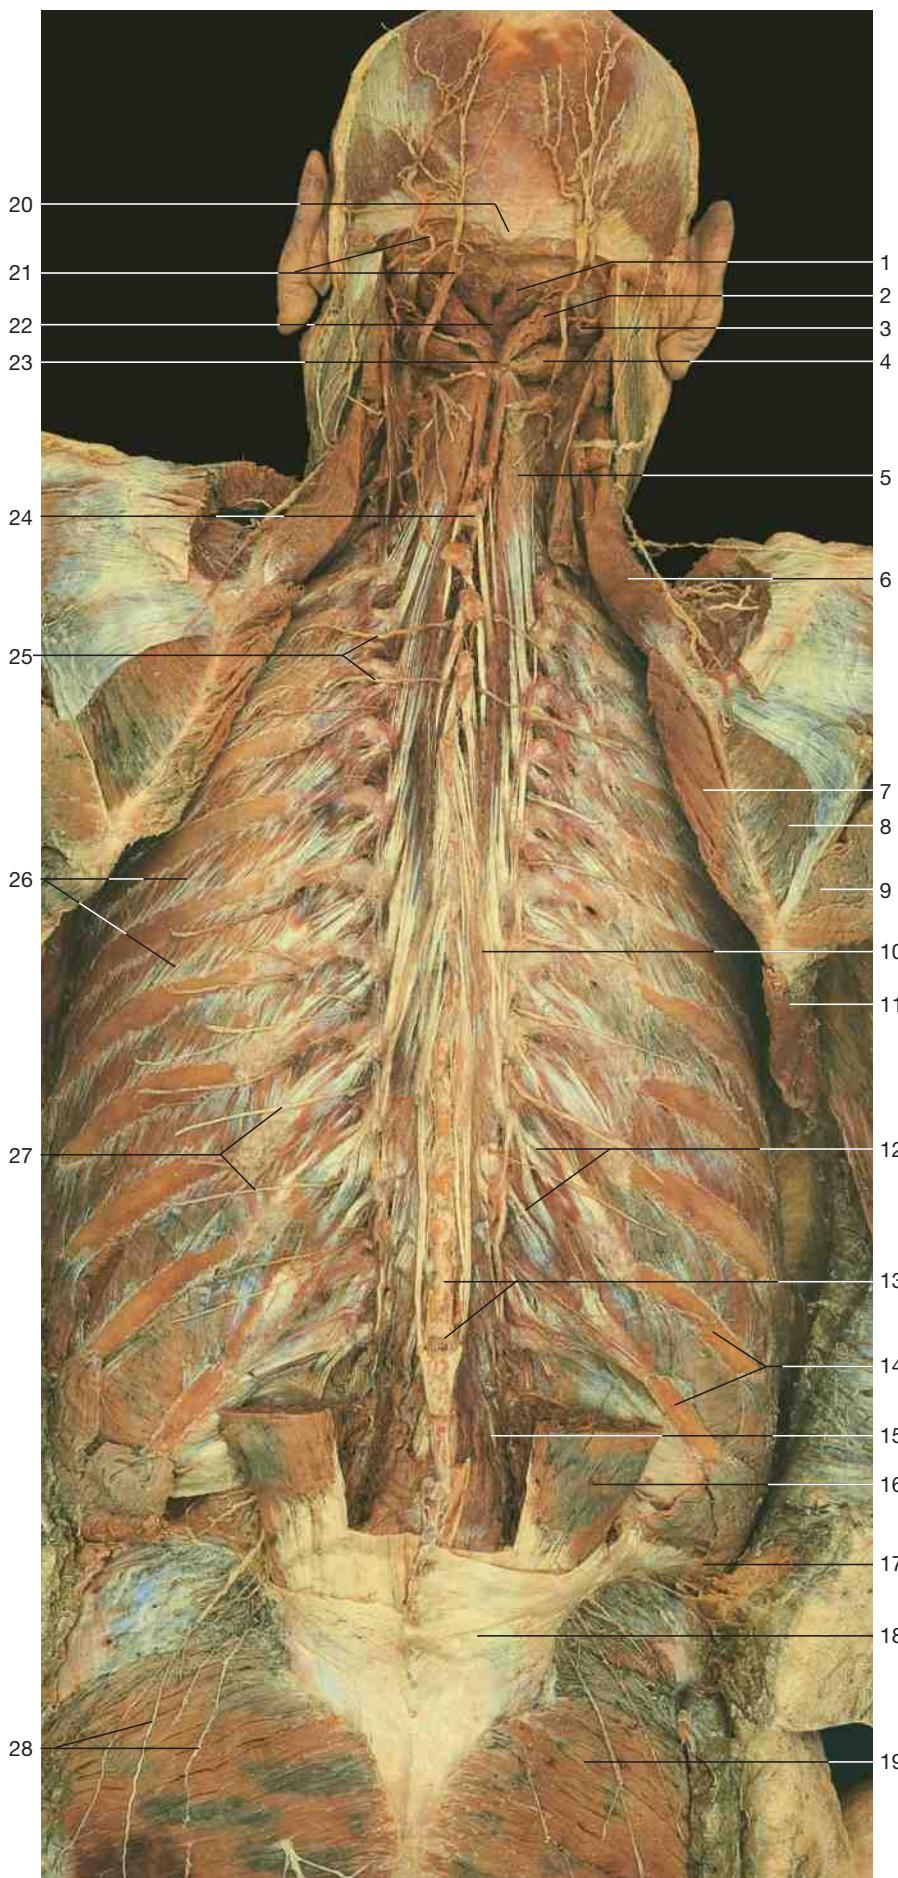

Muscles of the back. Dissection of the erector spinae muscle (lateral column of the intrinsic back muscles).

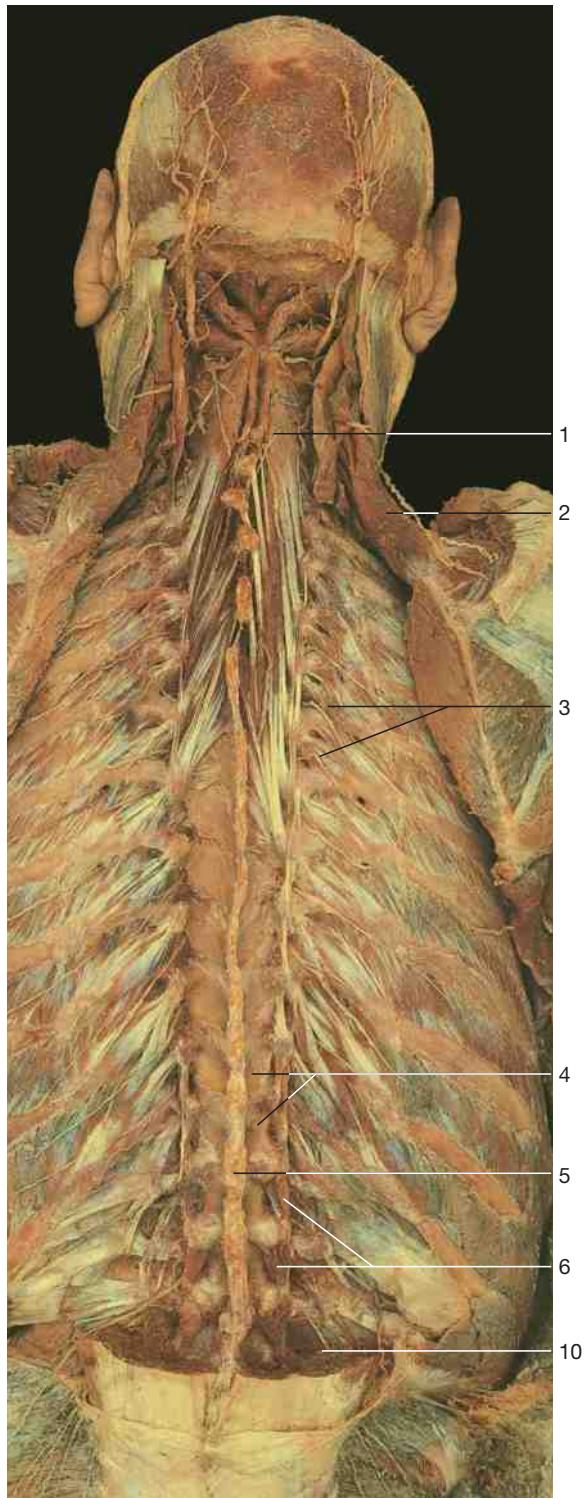

Origin and insertion of iliocostalis and longissimus muscles (schematic drawing).

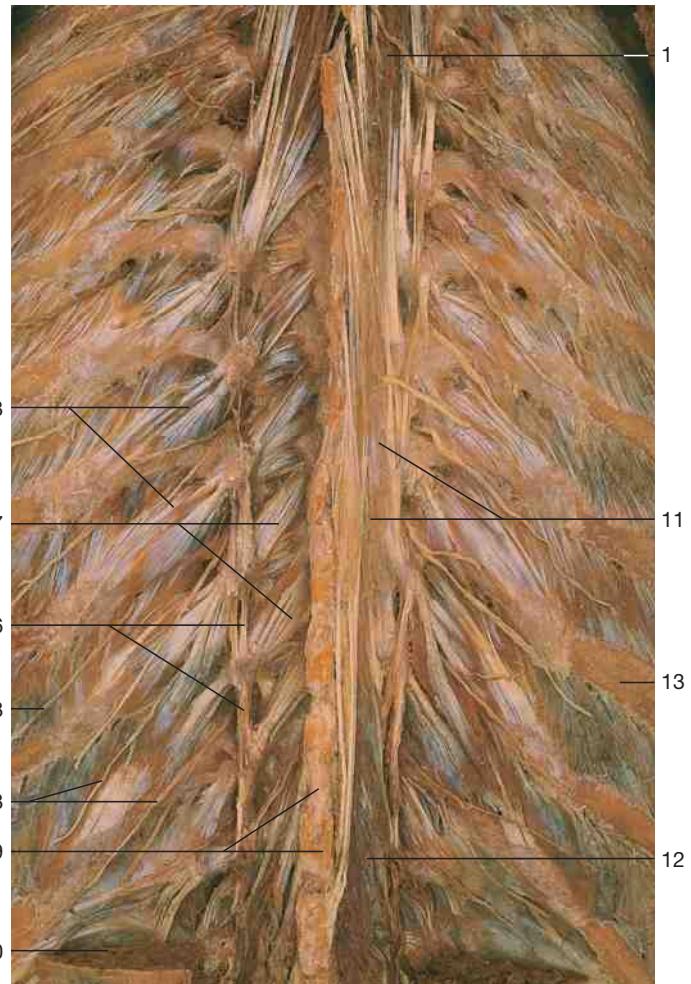

- 1 Rectus capitis posterior minor muscle
- 2 Rectus capitis posterior major muscle
- 3 Obliquus capitis inferior muscle
- 4 Spinous process of axis
- 5 Semispinalis cervicis muscle
- 6 Spinous process of seventh vertebra
- 7 Iliocostalis cervicis muscle
- 8 External intercostal muscles
- 9 Iliocostalis thoracis muscle
- 10 Longissimus thoracis muscle
- 11 Iliocostalis lumborum muscle
- 12 Internal abdominal oblique muscle
- 13 Semispinalis capitis muscle (divided)
- 14 Longissimus capitis muscle
- 15 Levator scapulae muscle
- 16 Longissimus cervicis muscle
- 17 Rhomboid major muscle
- 18 Spinalis thoracis muscle
- 19 Serratus posterior inferior muscle (reflected)
- 20 Spinous process of second lumbar vertebra
- 21 Iliac crest
- 22 Mastoid process

Muscles of the back. Dissection of the deeper layer of the intrinsic muscles of the back (longissimus and iliocostalis muscles are cut).

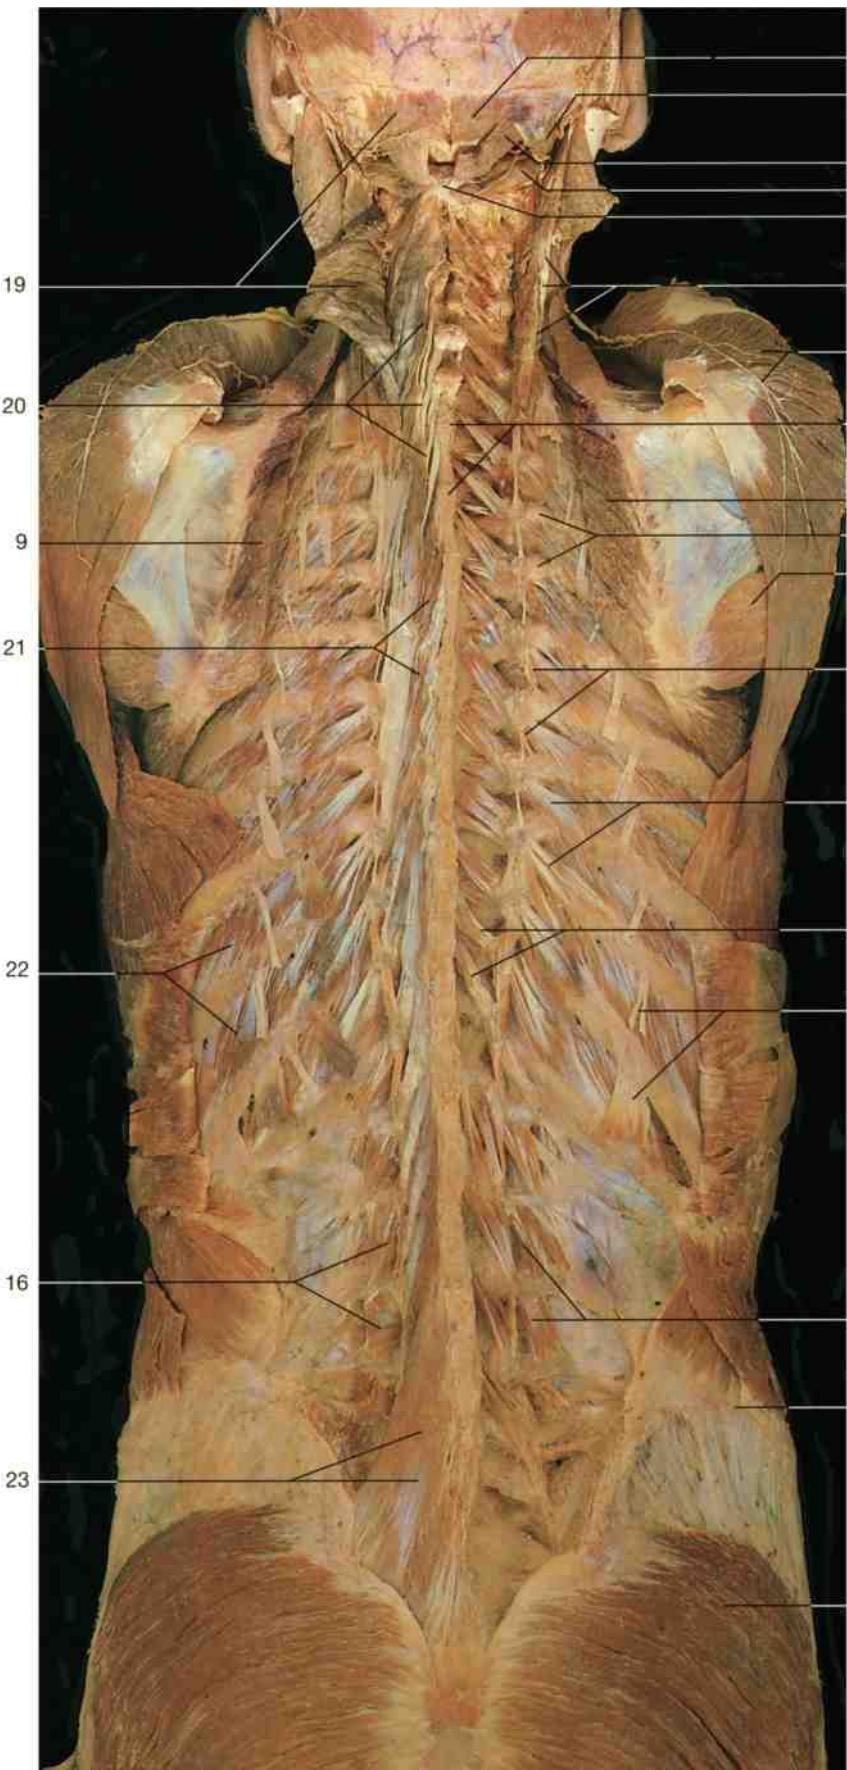

Muscles of the back. Deepest layer.

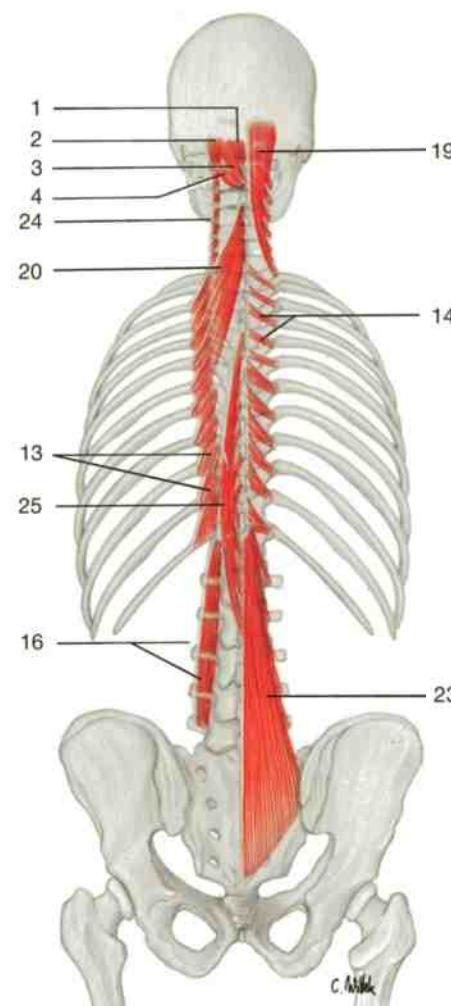

Muscles of the back. Deepest layer. Lumbar region (higher magnification).

- 1 Semispinalis cervicis muscle
- 2 Levator scapulae muscle
- 3 Levatores costarum muscles
- 4 Vertebral arches of lumbar vertebrae
- 5 Supraspinal ligaments
- 6 Intertransverse lumbar muscles
- 7 Lumbar rotator muscles
- 8 Cutaneous branches of spinal nerves
- 9 Lumbar interspinal muscles
- 10 Longissimus and iliocostalis muscle (cut)
- 11 Spinal muscle of the back
- 12 Multifidus muscle
- 13 Tenth rib (T_{10})

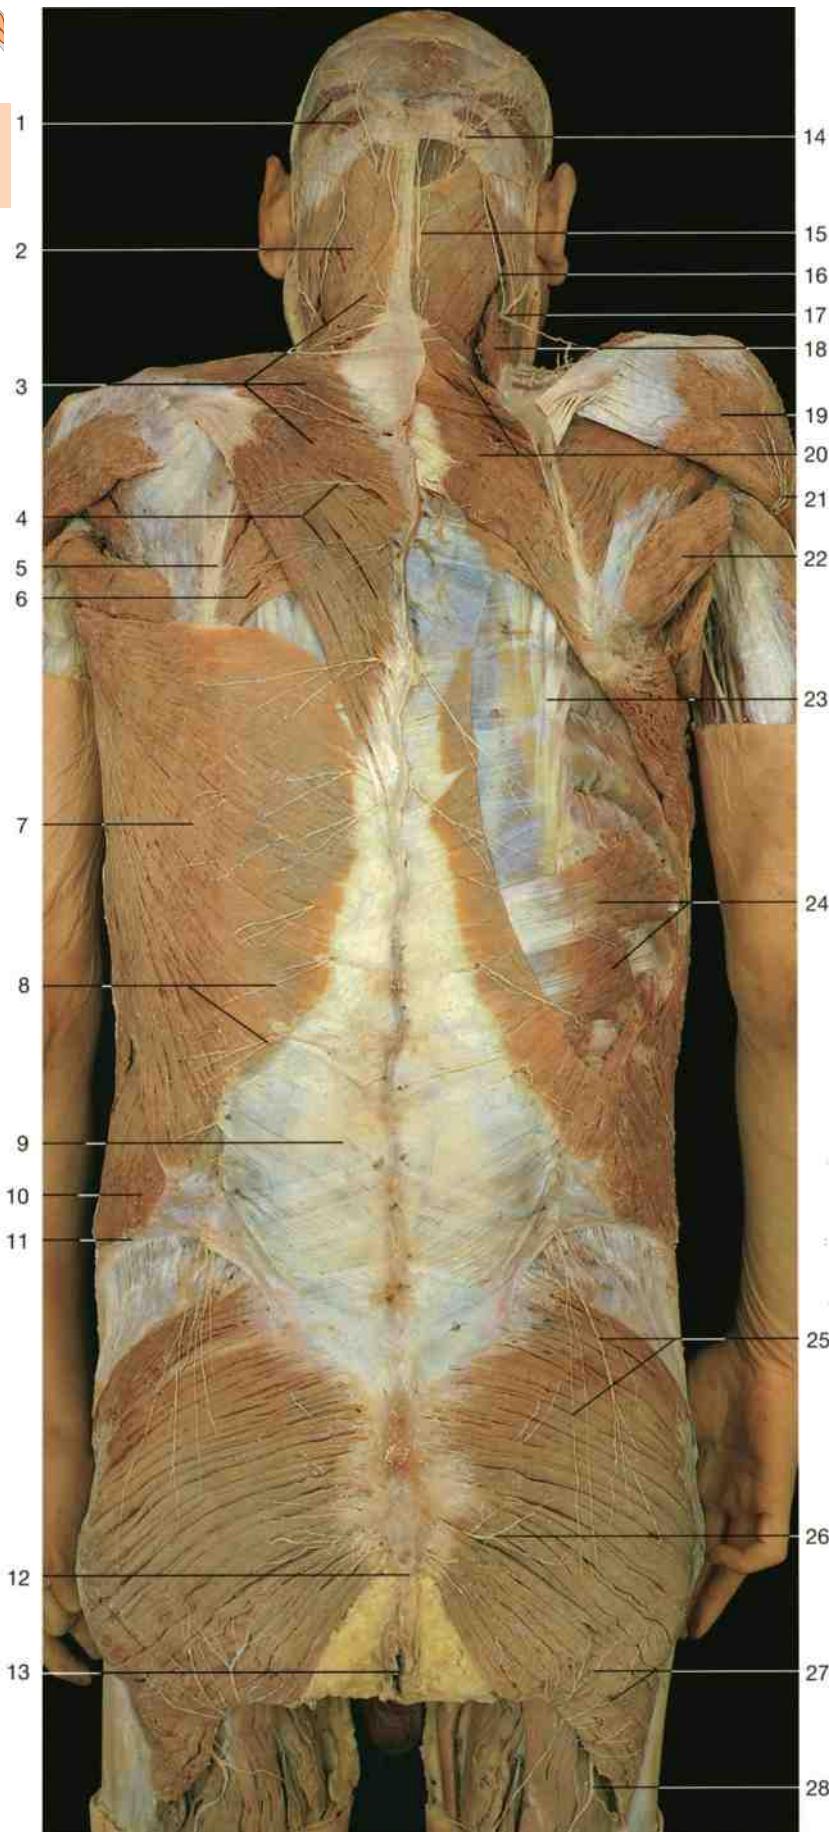

Muscles of the back. Transversospinal muscles, deepest layer on the right, where all parts of semispinalis and multifidus muscles have been removed.

Medial column of intrinsic muscles of the back. Transversospinal and intertransversal system (schematic drawing).

- 1 Rectus capitis posterior minor muscle
- 2 Obliquus capitis superior muscle
- 3 Rectus capitis posterior major muscle
- 4 Obliquus capitis inferior muscle
- 5 Spinous process of axis
- 6 Longissimus capitis muscle
- 7 Trapezius muscle (reflected) and accessory nerve (n. XI)
- 8 Spinous processes
- 9 Rhomboid major muscle
- 10 Transverse processes of thoracic vertebrae
- 11 Teres major muscle
- 12 Intertransverse ligaments
- 13 Levatores costarum muscles
- 14 Rotatores muscles
- 15 Tendons of iliocostalis muscle
- 16 Intertransversarii lumborum muscles (lateral)
- 17 Iliac crest
- 18 Gluteus maximus muscle
- 19 Semispinalis capitis muscle
- 20 Semispinalis cervicis muscle
- 21 Semispinalis thoracis muscle
- 22 External intercostal muscles
- 23 Multifidus muscle
- 24 Posterior cervical intertransversarii muscles
- 25 Spinalis thoracis muscle

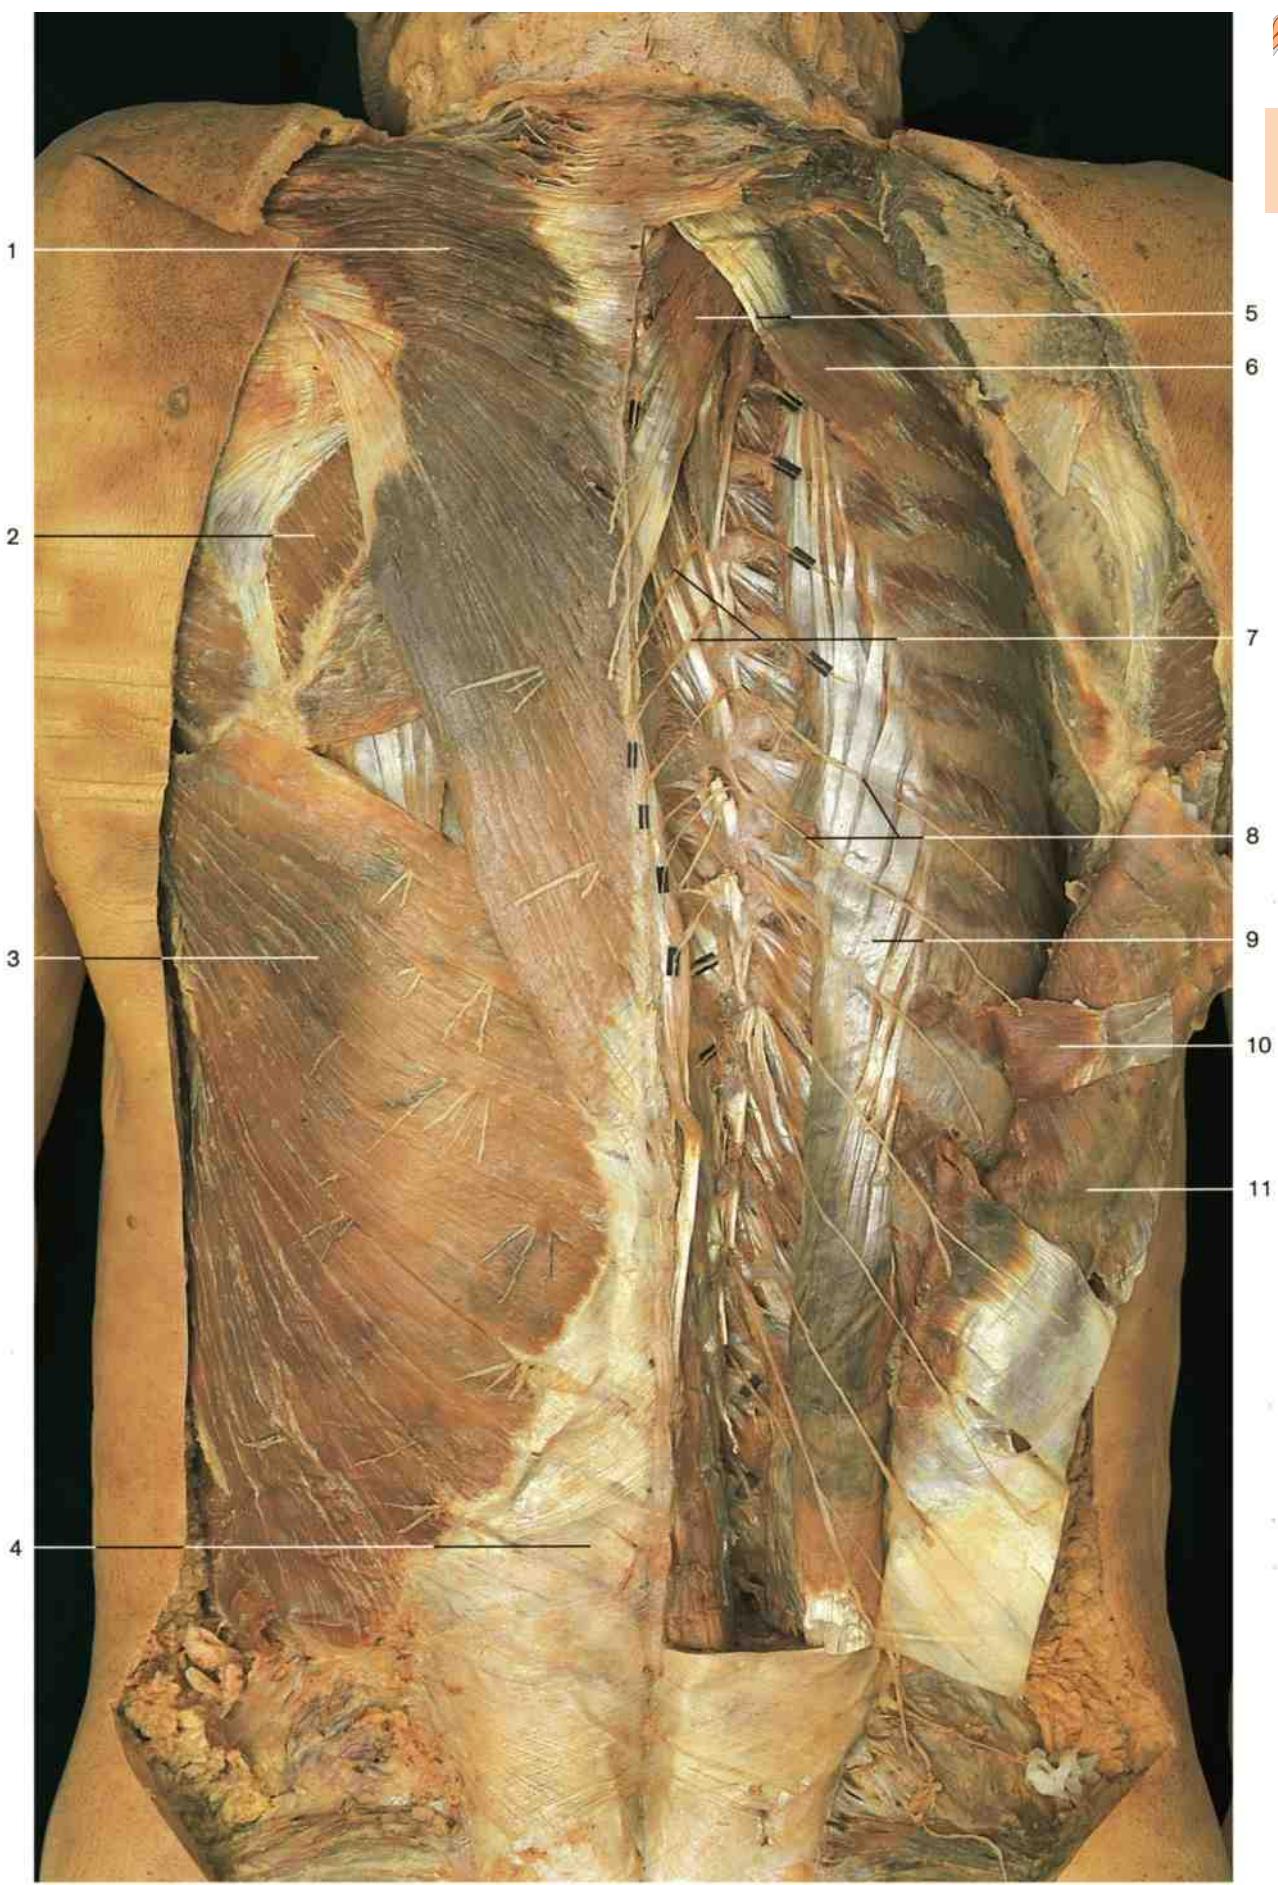

Innervation of the back. Superficial (left) and deeper (right) layers.
Right trapezius and latissimus dorsi muscles removed.

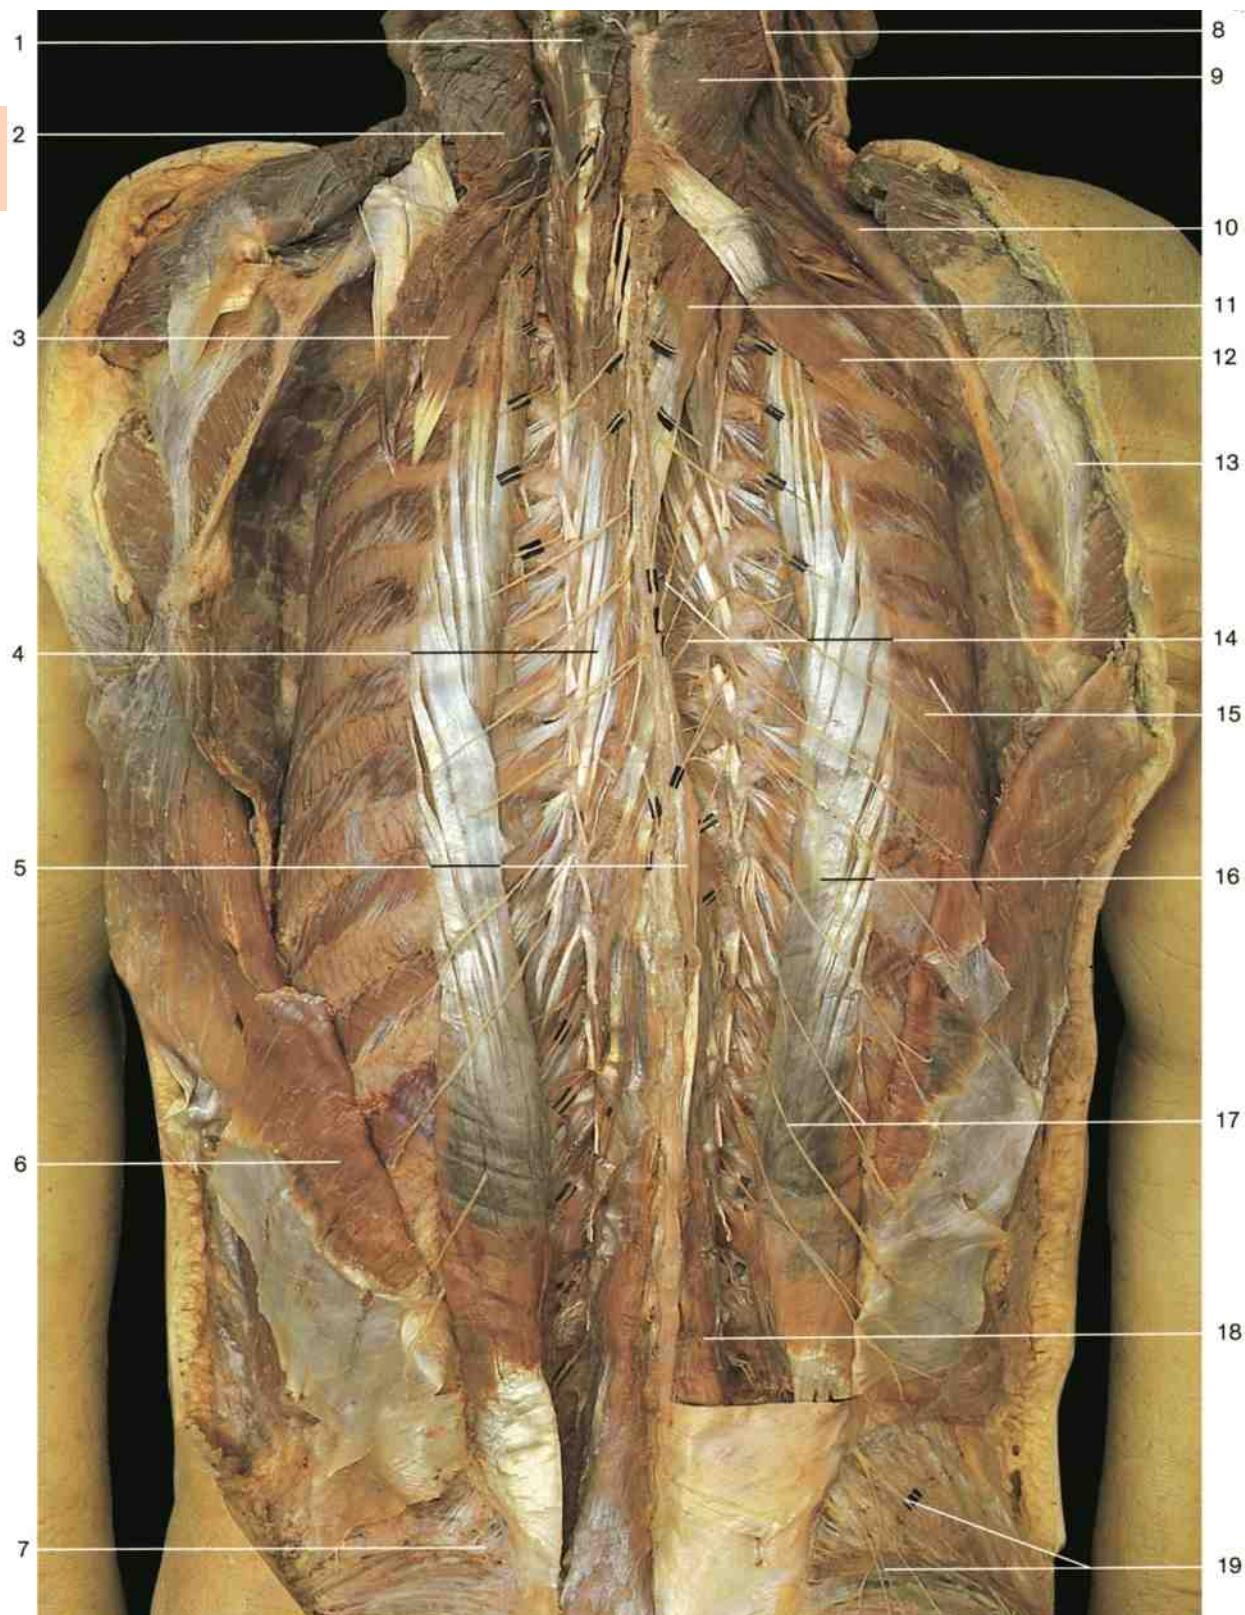

- 1 Occipital belly of occipitofrontalis muscle
- 2 Splenius capitis muscle
- 3 Trapezius muscle
- 4 Medial cutaneous branches of dorsal rami of spinal nerves
- 5 Medial margin of scapula
- 6 Rhomboid major muscle
- 7 Latissimus dorsi muscle
- 8 Lateral cutaneous branches of dorsal rami of spinal nerves
- 9 Thoracolumbar fascia
- 10 External abdominal oblique muscle
- 11 Iliac crest
- 12 Last coccygeal vertebra

General characteristics of the innervation of the back.
Distribution of dorsal branches of spinal nerves. Note the segmental arrangement of the innervation of the dorsal part of the trunk (schematic drawing).

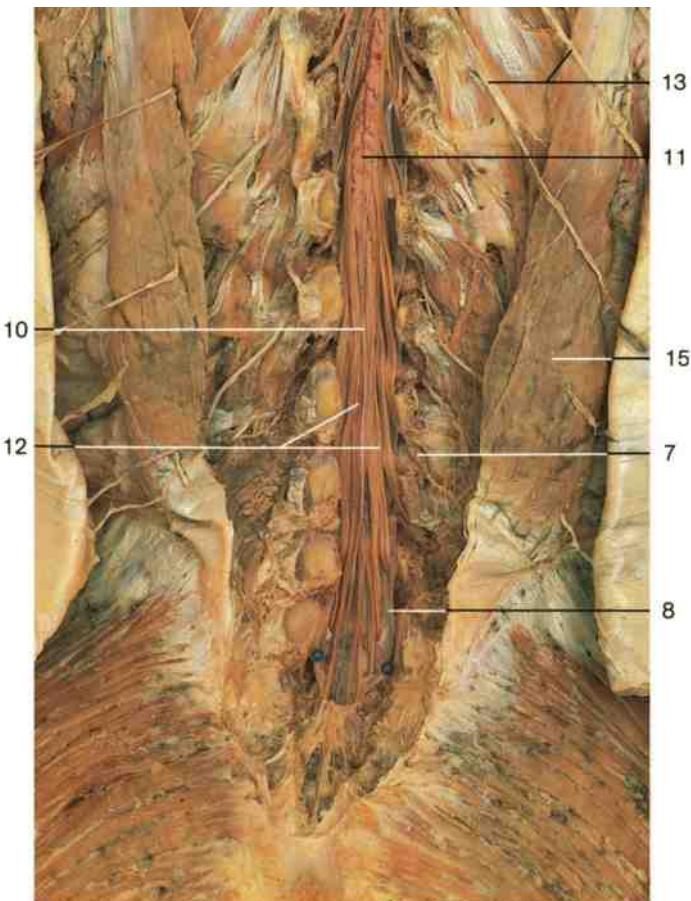

Posterior part of the thoracic wall (MRI scan, coronal section; from Heuck et al., MRT-Atlas, 2009).

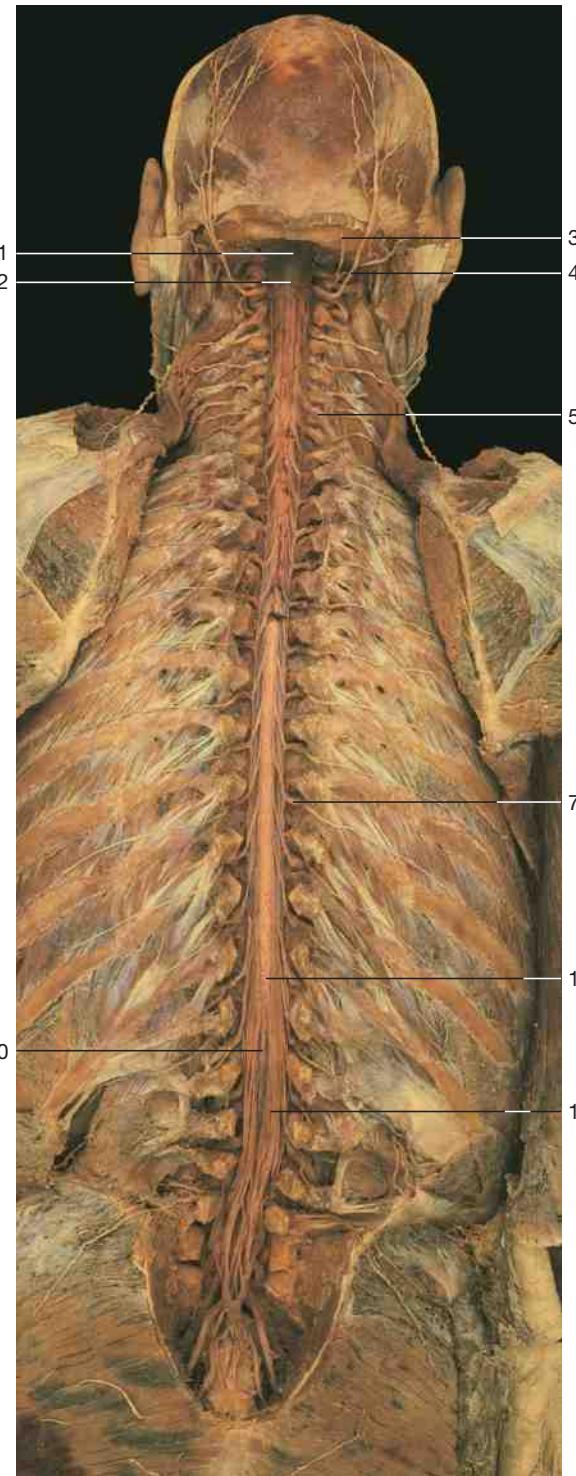

Position and branches of spinal nerves in one segment of thoracic wall (schematic drawing).

Lumbar portion of spinal cord. Note the relation between the nervous and muscular segments.

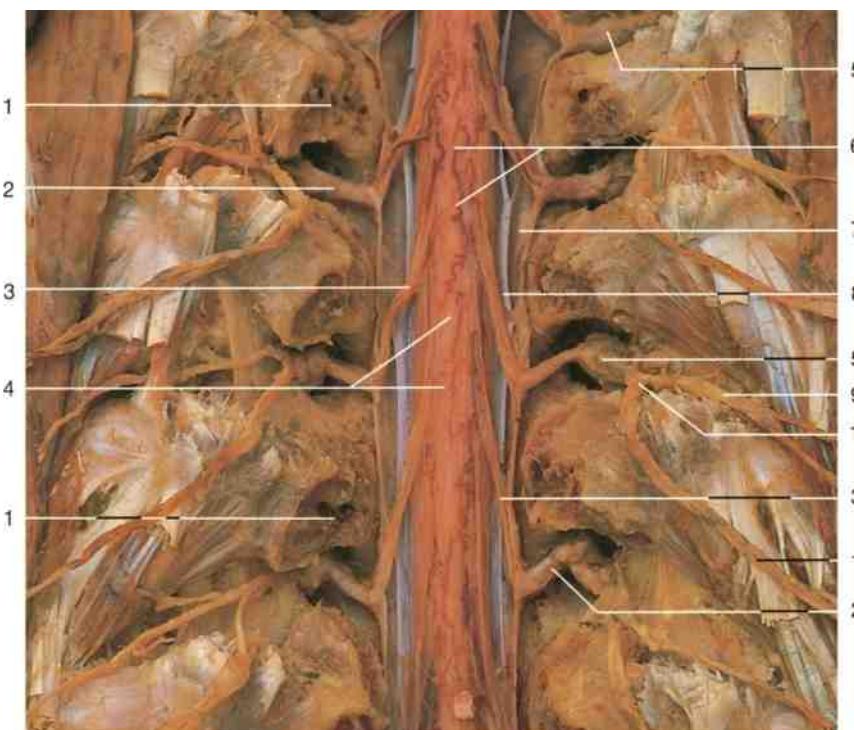

Terminal part of spinal cord. Dura removed.

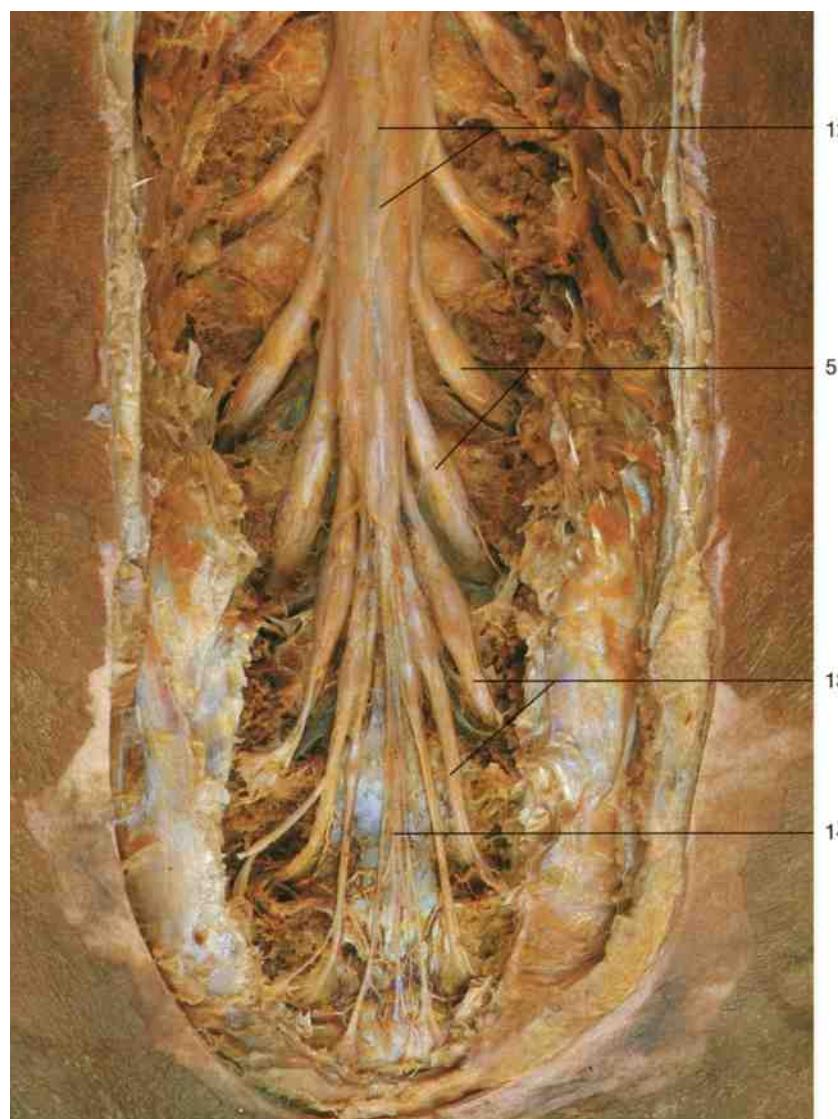

Innervation of the back. Spinal cord in the vertebral canal (opened). Longissimus dorsi and iliocostalis muscles have been removed.

4 Thoracic Organs

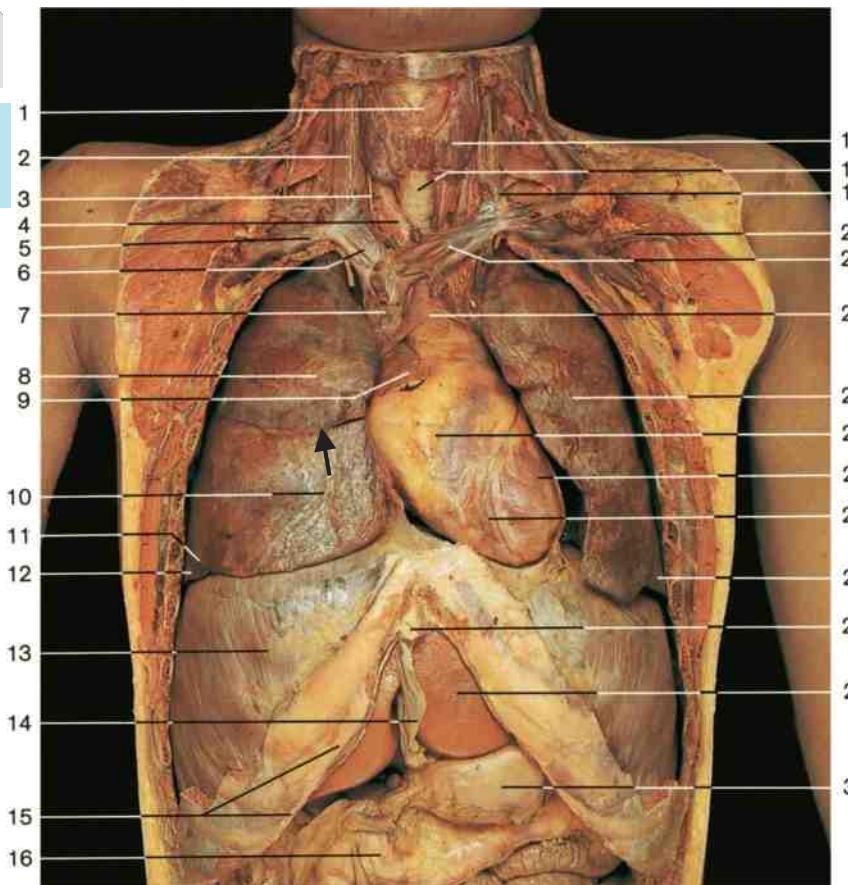

The thoracic cavity contains heart, lungs, and mediastinal organs. The thorax protects all organs but is still movable so that respiration can occur. The respiratory movements of the lung depend on the pleura covering, the thoracic wall, and the surface of the lungs. The mediastinal organs comprise the esophagus, trachea, and the related nerves and vessels, particularly the aorta, superior vena cava, and the thoracic duct. The thoracic cavity is separated from the abdominal cavity by the diaphragm.

Thoracic organs, heart, and lungs *in situ* (ventral aspect). Anterior thoracic wall, parietal pleura, and pericardium have been removed.

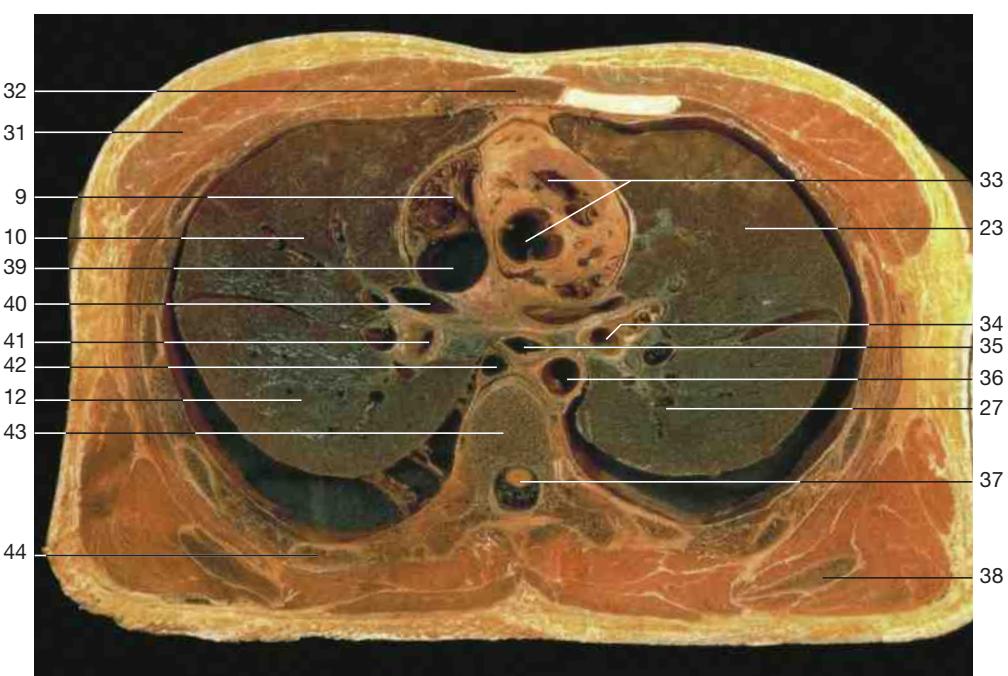

Position of lungs and heart within the thoracic cavity (schematic drawing). The anterior part of the thorax is not depicted.

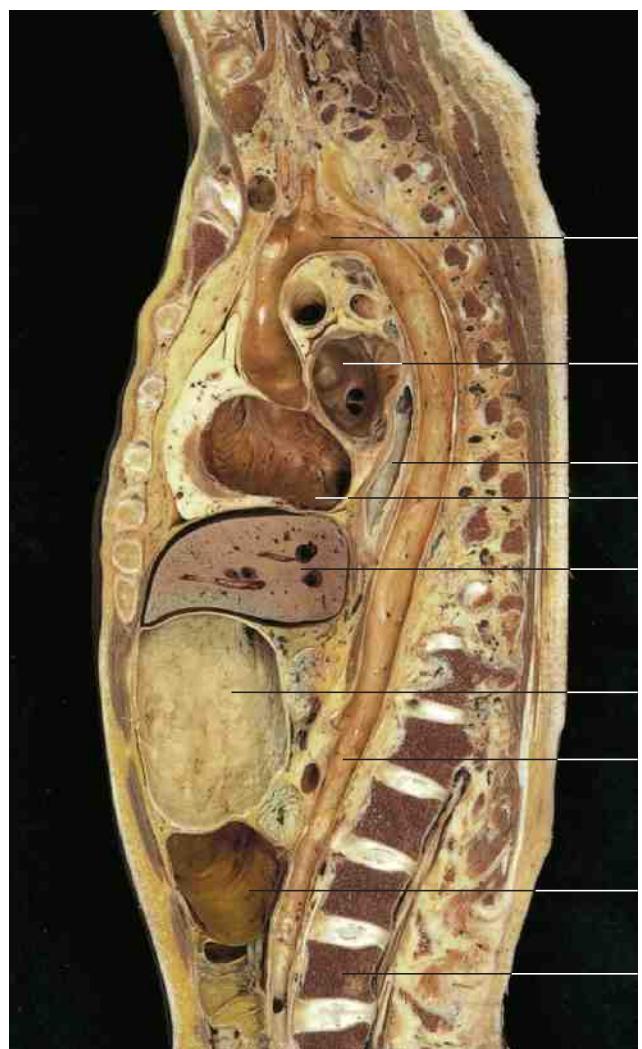

Positions of thoracic organs. The anterior thoracic wall has been removed.

The bronchopulmonary segments of the lungs are differentiated by the various colors. Notice that there is no segment in the left lung that corresponds to the seventh

segment of the right lung. Compare with the schematic drawing on the facing page.

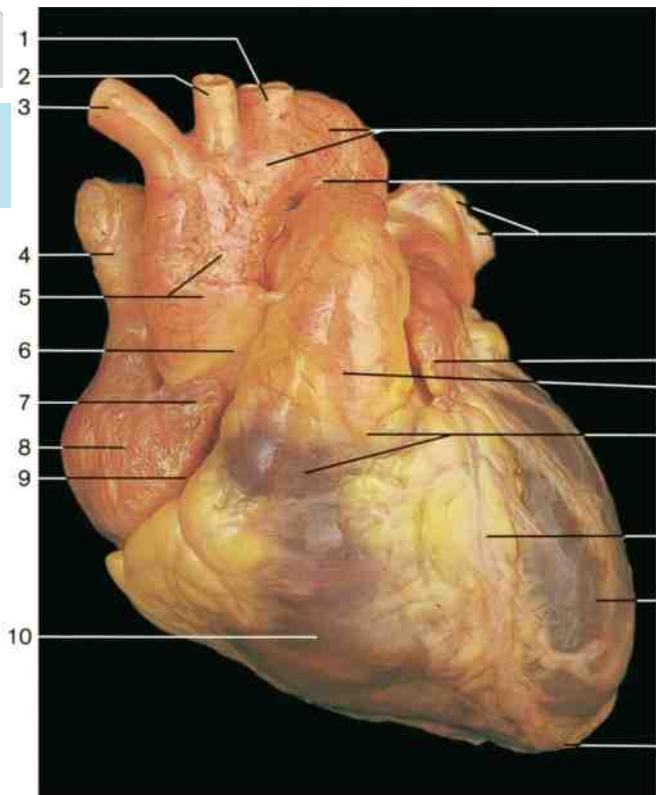

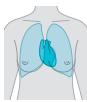

Distribution of bronchopulmonary segments of the lungs and their relation to the bronchial tree (after J. F. Huber).

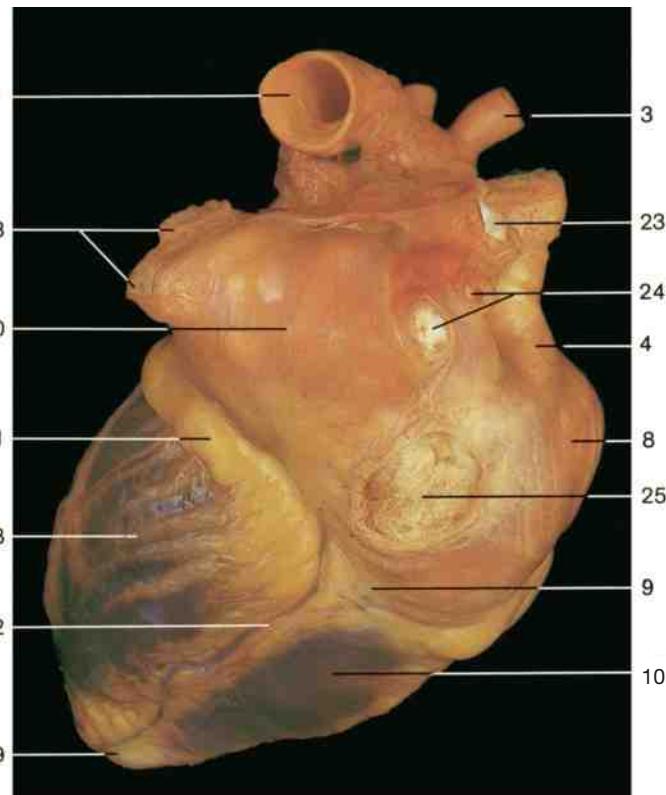

The bronchopulmonary segments are morphologically and functionally separate, independent respiratory units of the lung tissue. Each segment is surrounded by connective tissue that is continuous with the visceral pleura. The segmental bronchi are centrally located in each segment and are closely accompanied by branches of the pulmonary

arteries, whereas the tributaries of the pulmonary veins run between the segments. Thus, the veins serve two adjacent segments that drain for the most part into more than one vein. A bronchopulmonary segment is therefore not a complete vascular unit, but segmentation is the result of a specific architecture of the lung vasculature.

Right lung	Left lung

- 30 Coronary sulcus
- 31 Myocardium of left ventricle
- 32 Left pulmonary artery
- 33 Left pulmonary vein
- 34 Apex of heart

Heart (posterior aspect). The myocardium of the left ventricle has been fenestrated to show the muscle fiber bundles of the deeper layer with their more circular course.

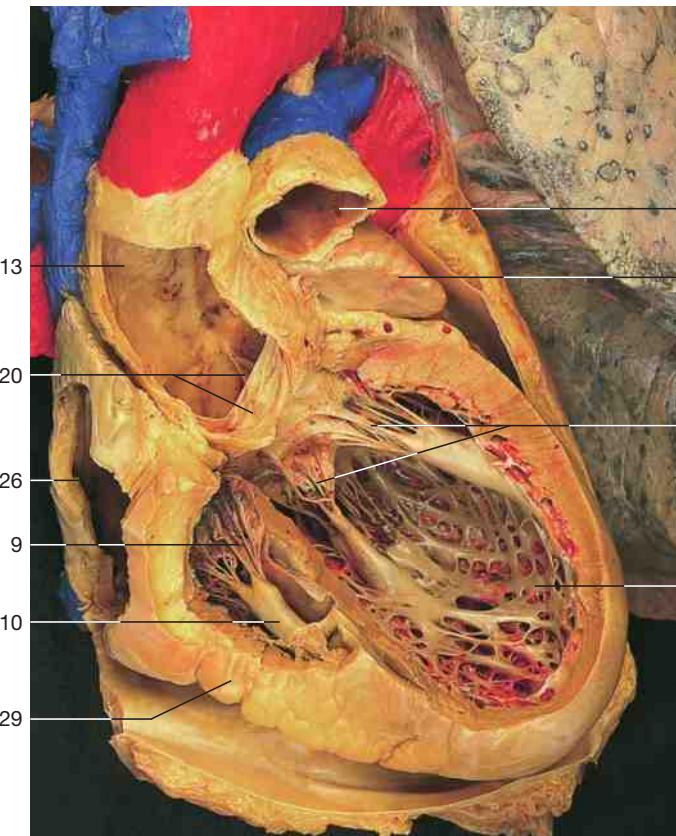

Vortex of cardiac muscle fibers (from below).

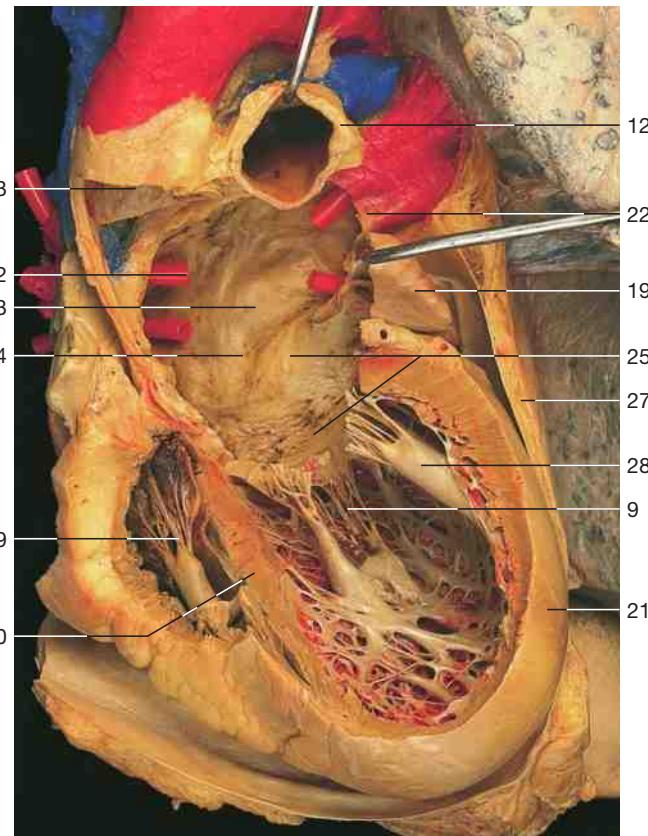

Right heart (anterior aspect). Anterior wall of right atrium and ventricle removed.

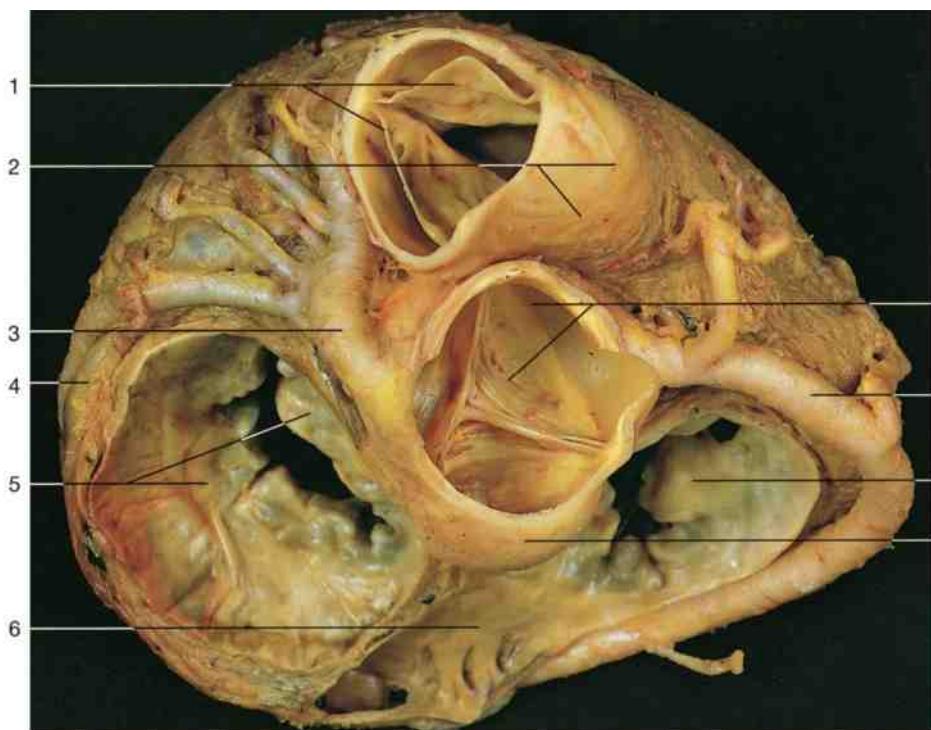

- 1 Superior vena cava
- 2 Crista terminalis
- 3 Fossa ovalis
- 4 Opening of inferior vena cava
- 5 Opening of coronary sinus
- 6 Right auricle
- 7 Right coronary artery and coronary sulcus
- 8 Anterior cusp of tricuspid valve
- 9 Chordae tendineae
- 10 Anterior papillary muscle
- 11 Myocardium
- 12 Pulmonary trunk
- 13 Ascending aorta
- 14 Pulmonic valve
- 15 Conus arteriosus (interventricular septum)
- 16 Septal papillary muscles
- 17 Septomarginal trabecula or moderator band
- 18 Apex of heart
- 19 Left auricle
- 20 Aortic valve
- 21 Left ventricle
- 22 Pulmonary veins
- 23 Position of fossa ovalis
- 24 Left atrium
- 25 Left atrioventricular (bicuspid or mitral) valve
- 26 Right atrium
- 27 Pericardium
- 28 Posterior papillary muscle
- 29 Right ventricle
- 30 Interventricular septum

Heart, left ventricle with mitral valve, papillary muscles, and aortic valve (anterior portion of the heart removed).

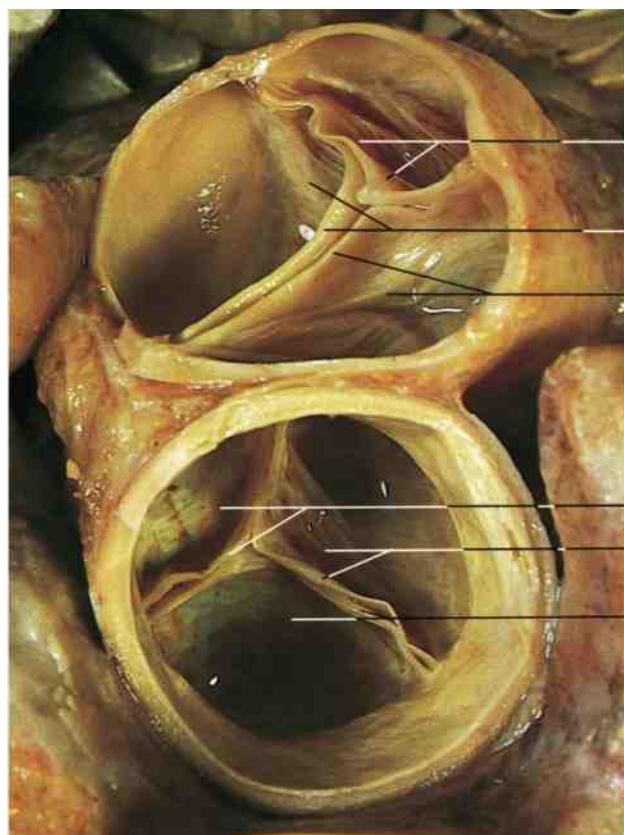

Heart, left ventricle, and atrium (opened) showing the posterior part of the mitral valve with papillary muscles.

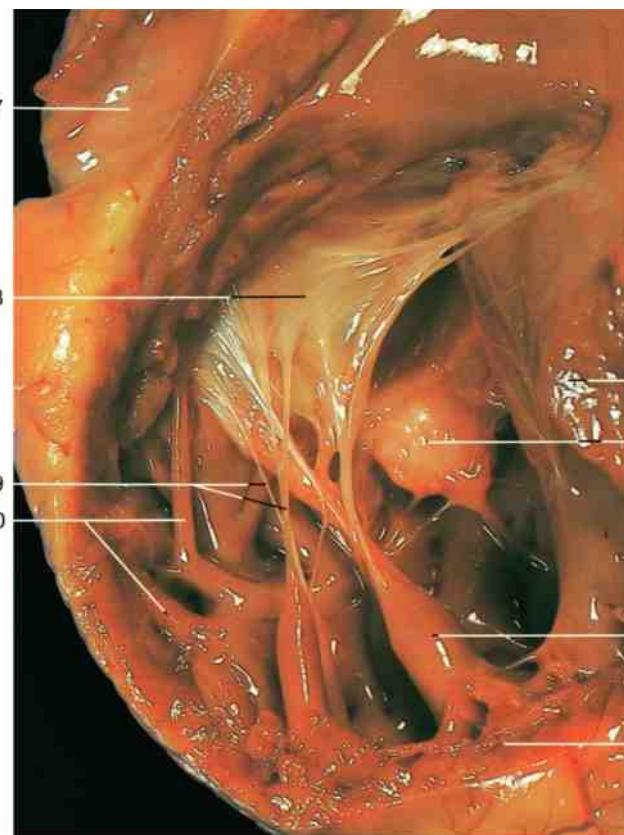

Valves of heart (superior aspect). Left and right atria removed. Dissection of coronary arteries.
Above: anterior wall of the heart.

- 1 Pulmonic valve
- 2 Sinus of pulmonary trunk
- 3 Left coronary artery
- 4 Great cardiac vein
- 5 Left atrioventricular (mitral) valve
- 6 Coronary sinus
- 7 Aortic valve
- 8 Right coronary artery
- 9 Right atrioventricular (tricuspid) valve
- 10 Bulb of aorta
- 11 Anterior semilunar cusp of pulmonic valve
- 12 Left semilunar cusp of pulmonic valve
- 13 Right semilunar cusp of pulmonic valve
- 14 Left semilunar cusp of aortic valve
- 15 Right semilunar cusp of aortic valve
- 16 Posterior semilunar cusp of aortic valve
- 17 Right atrium
- 18 Anterior cusp of tricuspid valve
- 19 Chordae tendineae
- 20 Trabeculae carneae
- 21 Interventricular septum
- 22 Septal cusp of tricuspid valve
- 23 Anterior papillary muscle
- 24 Myocardium of right ventricle

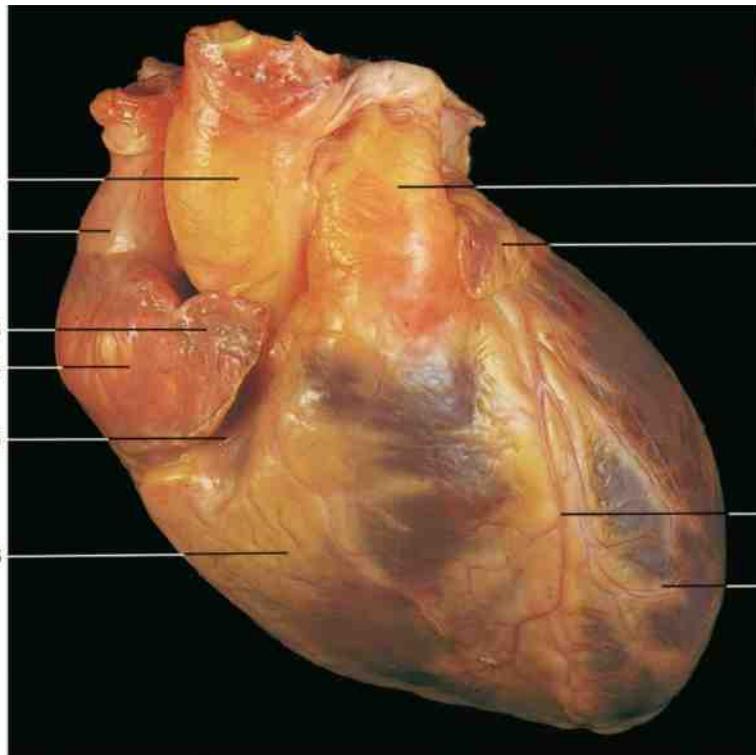

Pulmonic and aortic valves (from above). Anterior wall of the heart at the top. Both valves are closed.

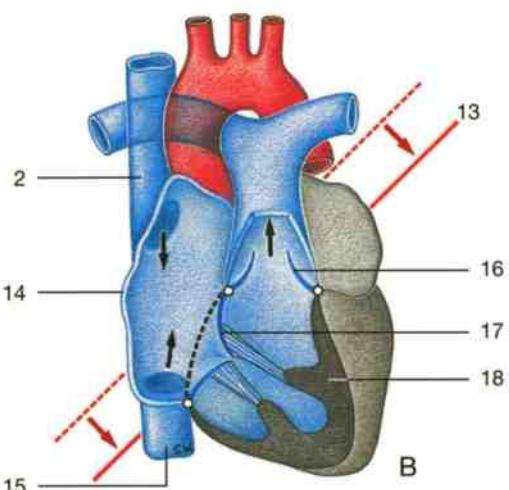

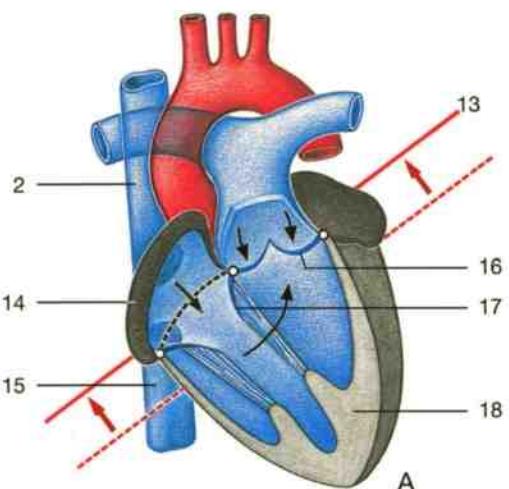

Right atrioventricular (tricuspid) valve (anterior aspect after removal of the anterior wall of the right ventricle).

21
22
23
24

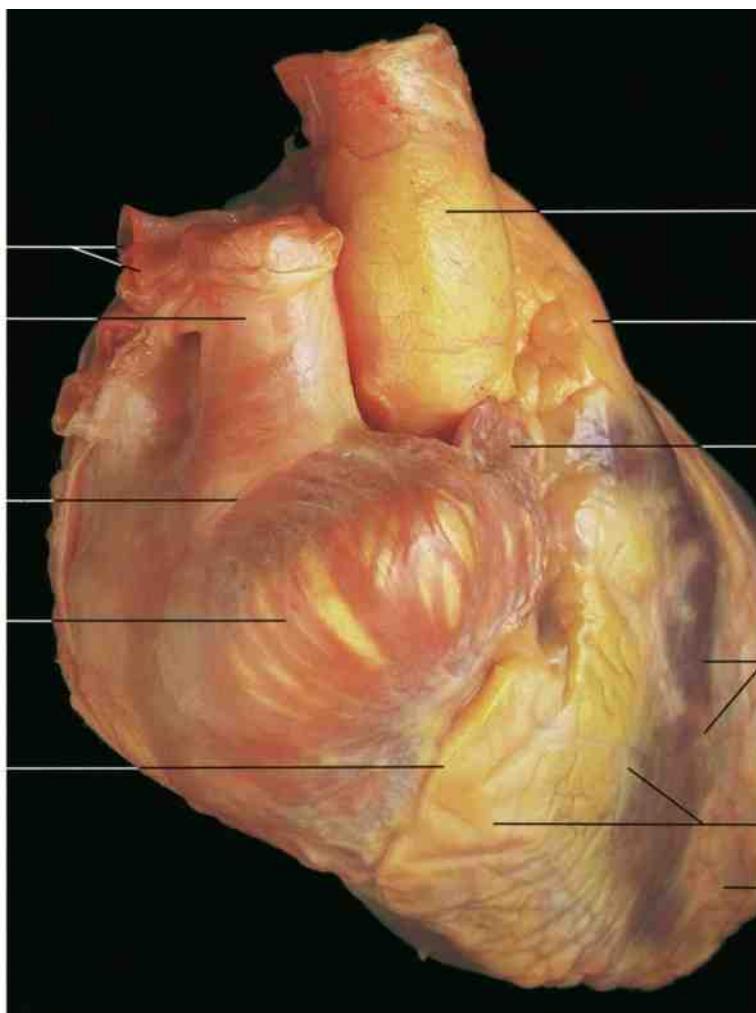

Heart, fixed in **diastole** (anterior aspect). The ventricles are relaxed, atria contracted.

- 1 Ascending aorta
- 2 Superior vena cava
- 3 Right auricle
- 4 Right atrium
- 5 Coronary sulcus
- 6 Right ventricle
- 7 Pulmonary trunk
- 8 Left auricle
- 9 Anterior interventricular sulcus
- 10 Left ventricle
- 11 Right pulmonary artery
- 12 Sulcus terminalis with sinu-atrial node
- 13 Line indicating plane of position of valves
- 14 Myocardium of right atrium
- 15 Inferior vena cava
- 16 Valve of pulmonary trunk
- 17 Tricuspid valve
- 18 Myocardium of right ventricle

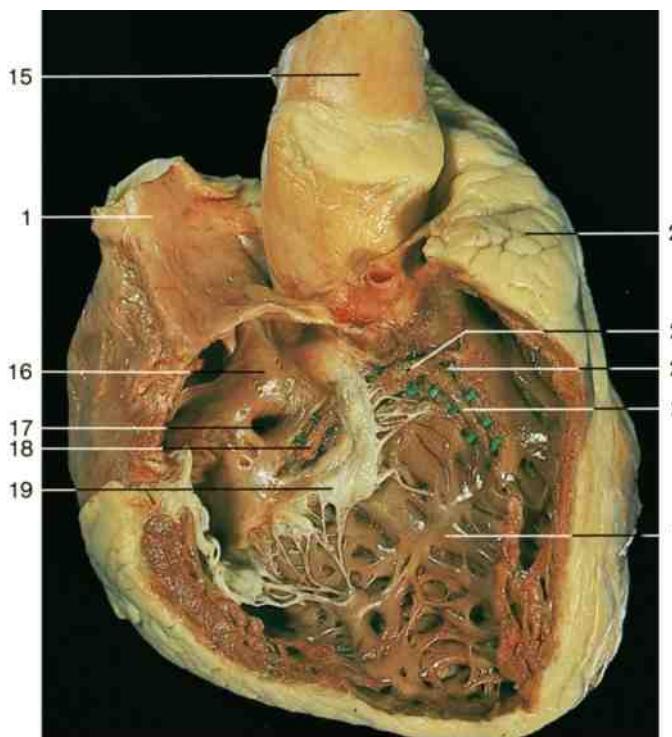

Morphological changes during heart movements.
Note the changes in position of the valves (red arrows). Contracted portions of heart are indicated in black.

- A. **Diastole:** muscles of the ventricles relaxed, atrioventricular valves open, semilunar valves closed.
B. **Systole:** muscles of ventricles contracted, atrioventricular valves closed, semilunar valves open.

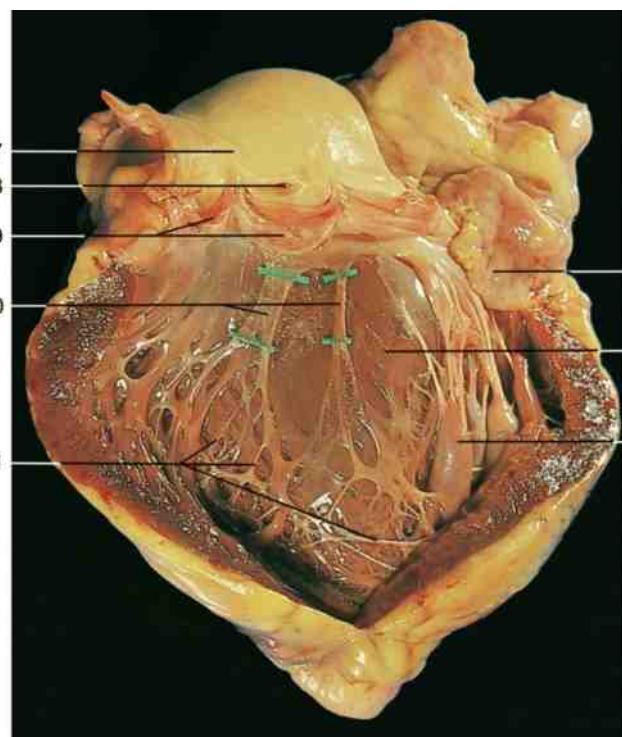

Heart, fixed in **systole** (antero-lateral aspect). The ventricles are contracted, atria dilated.

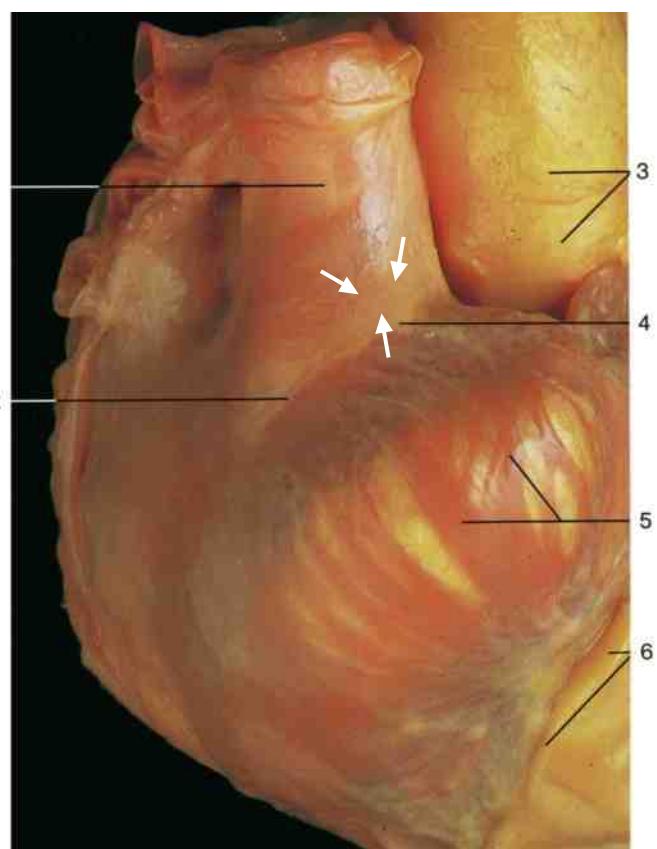

Right ventricle, dissection of atrioventricular node, atrioventricular bundle (bundle of His), and right limb or bundle branch (probes).

- | | |
|-----------------------------|--|
| 1 Superior vena cava | 5 Muscle fiber bundles of right atrium |
| 2 Sulcus terminalis | 6 Coronary sulcus (with right coronary artery) |
| 3 Bulb of aorta | 7 Aortic sinus |
| 4 Sinu-atrial node (arrows) | 8 Entrance to left coronary artery |

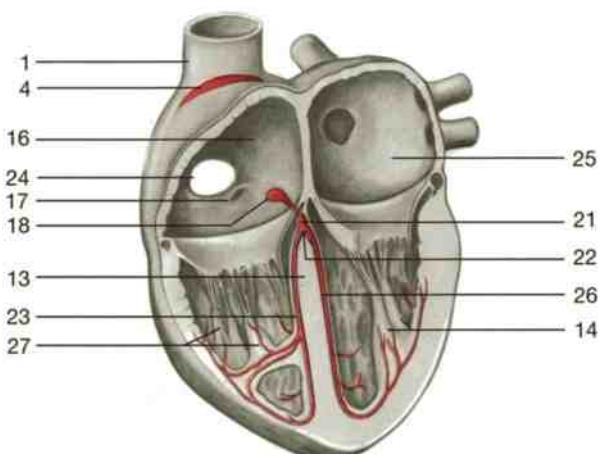

Left ventricle, dissection of left limb or bundle branch of conducting system (probes).

Bronchial tree in situ (ventral aspect). Heart and pericardium have been removed; the bronchi of the bronchopulmonary segments are dissected.
1–10 = numbers of segments (cf. p. 246 and 251).

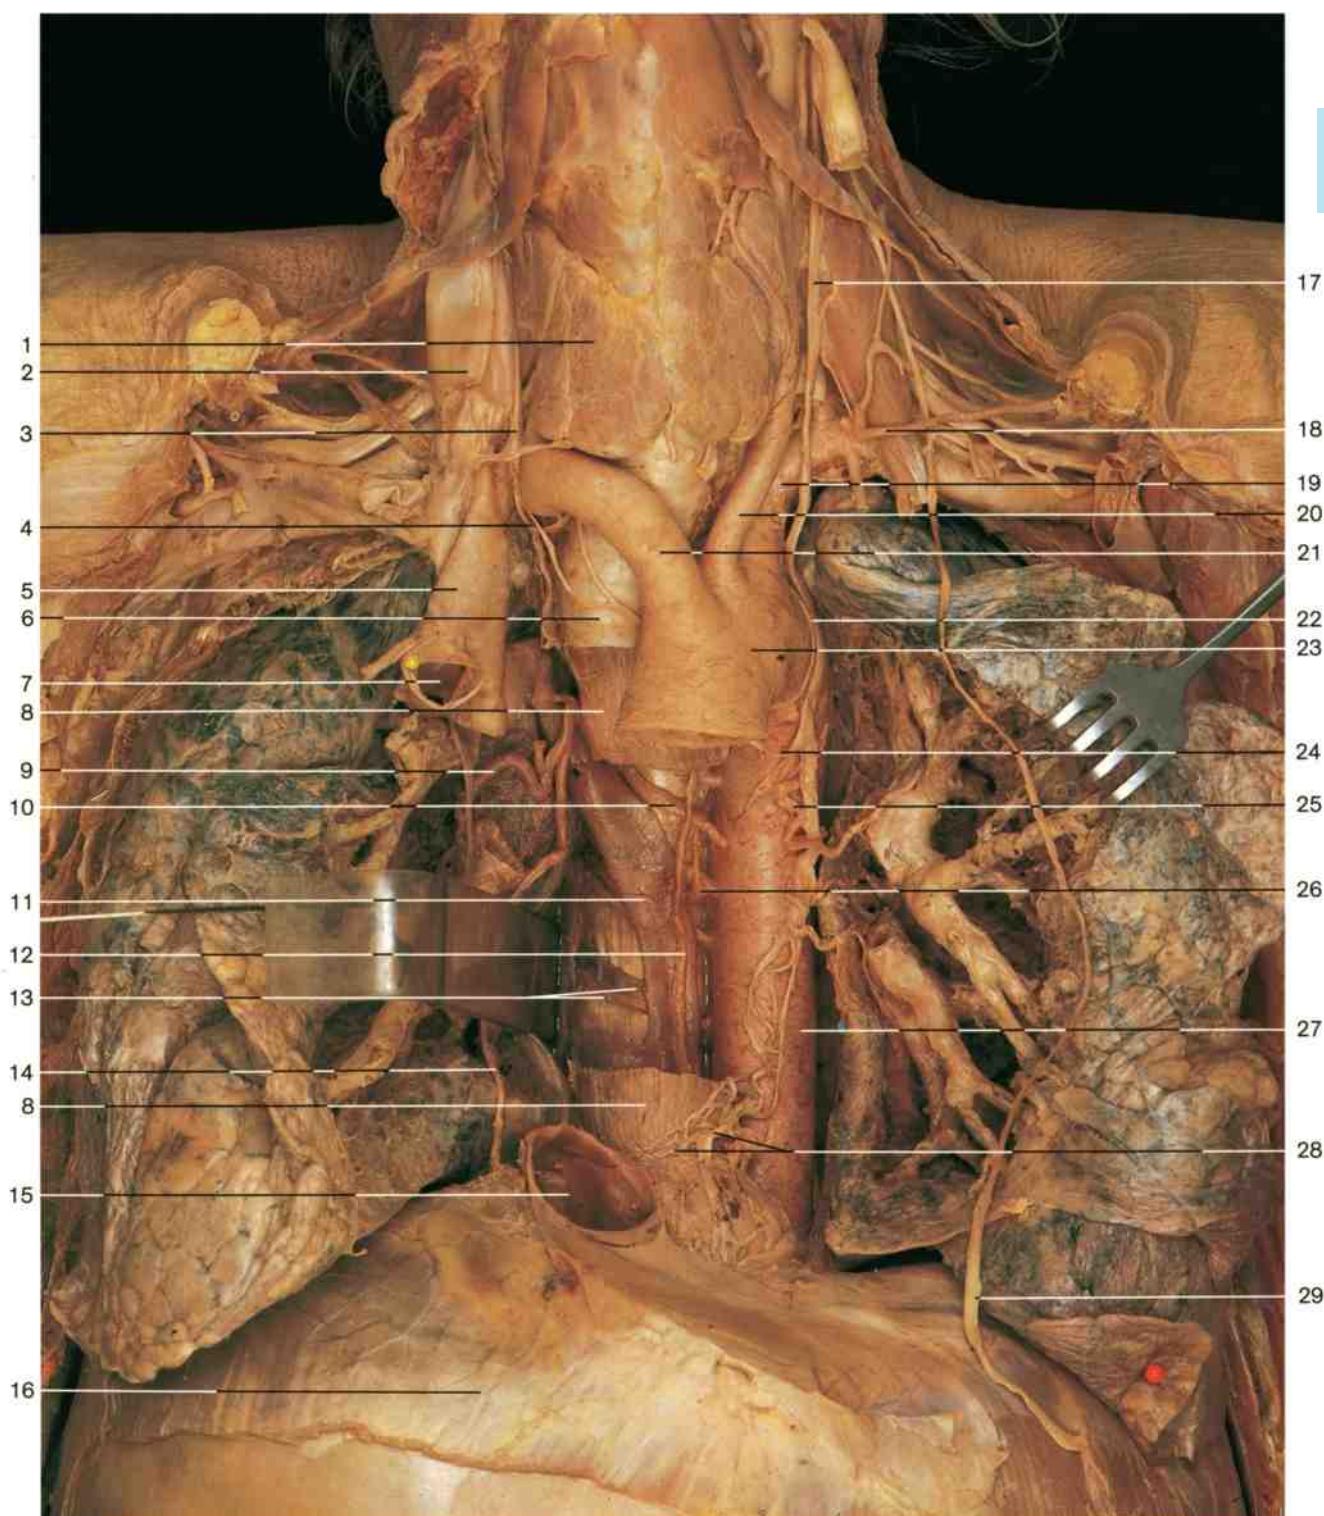

Relation of aorta, pulmonary trunk, and esophagus to trachea and bronchial tree (schematic drawing).

1–10 = numbers of segments (cf. p. 246 and 251).

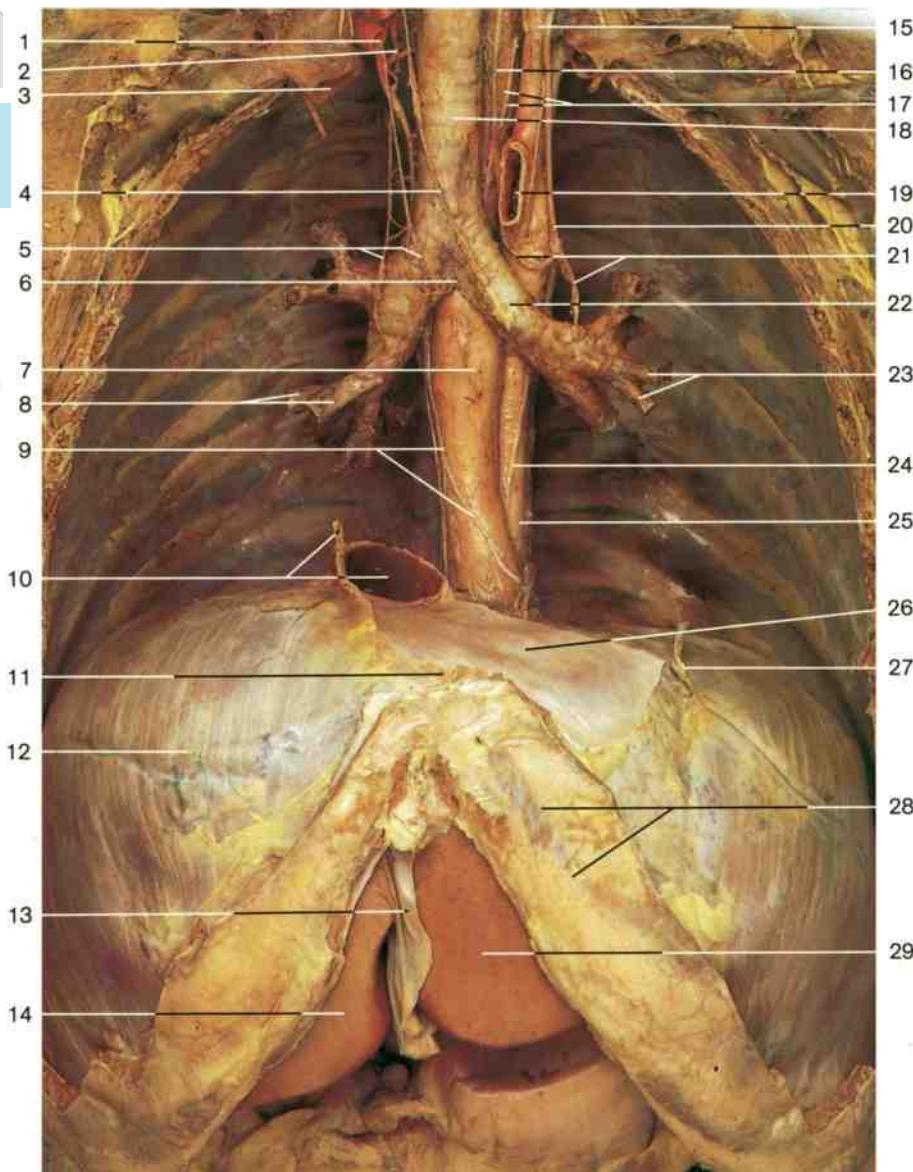

Mediastinal organs (ventral aspect). The heart with the pericardium has been removed, and the lungs and aortic arch have been slightly reflected to show the vagus nerves and their branches.

- | | | |
|---|---|-----------------------------------|
| 1 Supraclavicular nerves | 12 Right pulmonary artery | 24 Left vagus nerve |
| 2 Right internal jugular vein with ansa cervicalis | 13 Right pulmonary veins | 25 Left common carotid artery |
| 3 Omohyoid muscle | 14 Esophagus | 26 Aortic arch |
| 4 Right vagus nerve | 15 Esophageal plexus | 27 Left recurrent laryngeal nerve |
| 5 Clavicle | 16 Right phrenic nerve (divided) | 28 Bifurcation of trachea |
| 6 Right subclavian artery and recurrent laryngeal nerve | 17 Inferior vena cava | 29 Left pulmonary artery |
| 7 Right subclavian vein | 18 Pericardium covering the diaphragm | 30 Left primary bronchus |
| 8 Superior cervical cardiac branch of vagus nerve | 19 Larynx (thyroid cartilage and cricothyroid muscle) | 31 Descending aorta |
| 9 Inferior cervical cardiac branch of vagus nerve | 20 Thyroid gland | 32 Left pulmonary veins |
| 10 Azygos arch (divided) | 21 Left internal jugular vein | 33 Branch of left vagus nerve |
| 11 Right lung | 22 Esophagus and left recurrent laryngeal nerve | 34 Left lung |
| | 23 Trachea | 35 Left phrenic nerve (divided) |

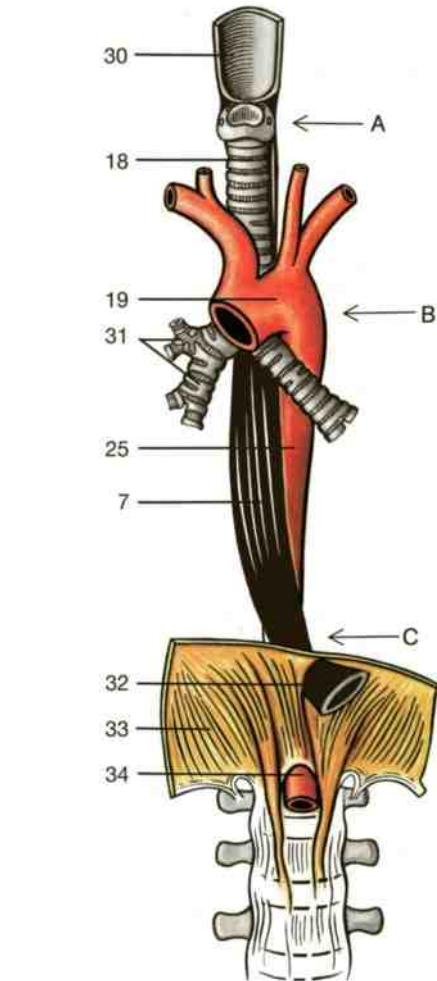

Mediastinal organs (ventral aspect). Heart and distal part of esophagus have been removed to display the vessels and nerves of the posterior mediastinum.

- | | | |
|---|--|-----------------------------------|
| 1 Thyroid gland | 11 Azygos vein | 21 Brachiocephalic trunk |
| 2 Right internal jugular vein | 12 Thoracic duct | 22 Left vagus nerve |
| 3 Right vagus nerve | 13 Posterior intercostal artery and vein
(in front of the vertebral column) | 23 Aortic arch |
| 4 Point where right recurrent laryngeal nerve
is branching off the vagus nerve | 14 Right phrenic nerve | 24 Left recurrent laryngeal nerve |
| 5 Right brachiocephalic vein | 15 Inferior vena cava | 25 Left bronchial artery |
| 6 Trachea | 16 Diaphragm | 26 Lymph node |
| 7 Left brachiocephalic vein (reflected) | 17 Left vagus nerve | 27 Thoracic aorta |
| 8 Esophagus | 18 Throcervical trunk | 28 Esophageal plexus |
| 9 Right bronchial artery | 19 Left subclavian artery | 29 Left phrenic nerve |
| 10 Posterior intercostal artery | 20 Left common carotid artery | |

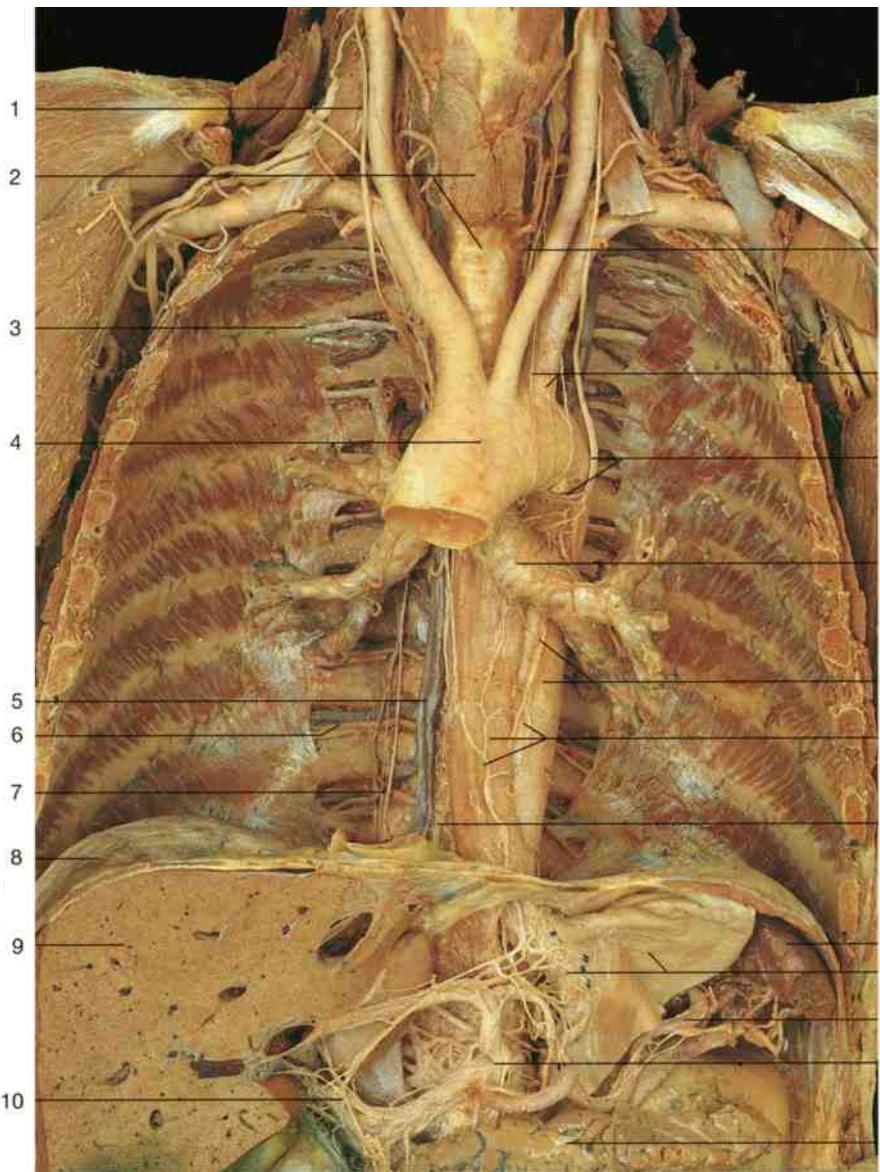

Diaphragm and organs of mediastinum (anterior aspect). Heart and lungs have been removed; the costal margin remains in place. Note the different courses of left and right vagus.

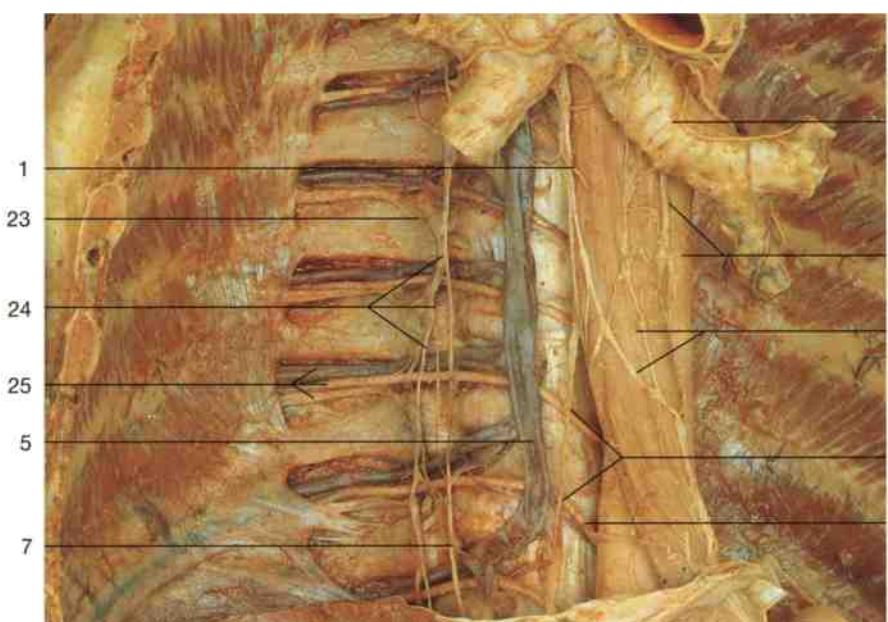

Organs of posterior mediastinum (ventral aspect, schematic drawing). Three regions in which the esophagus is narrowed are shown:

- A = termed upper sphincter (at the level of the cricoid cartilage);
- B = termed middle sphincter (at the level of the aortic arch);
- C = termed lower sphincter (at the level of the diaphragm).

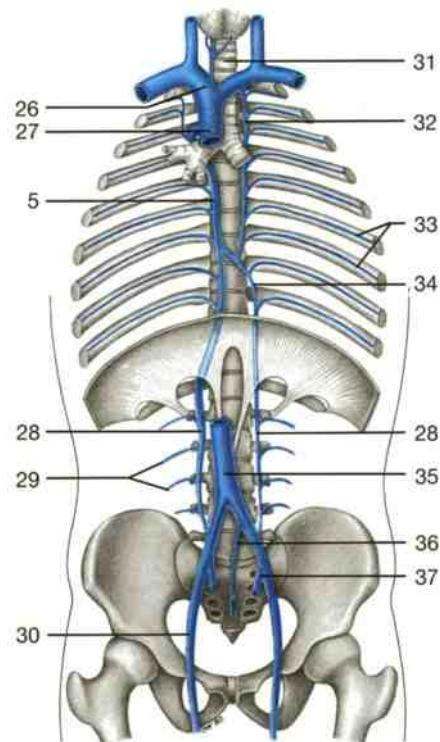

- | | | |
|---|---|---|
| 1 Right subclavian artery | 11 Sternal part of diaphragm | 23 Superior and inferior lingular bronchi |
| 2 Right recurrent laryngeal nerve | 12 Costal part of diaphragm | 24 Esophageal plexus of left vagus nerve |
| 3 Right brachiocephalic vein | 13 Falciform ligament of liver | 25 Descending aorta |

- 31 Superior mesenteric artery
- 32 Inferior mesenteric artery
- 33 Common iliac artery

Main branches of descending aorta (schematic drawing).

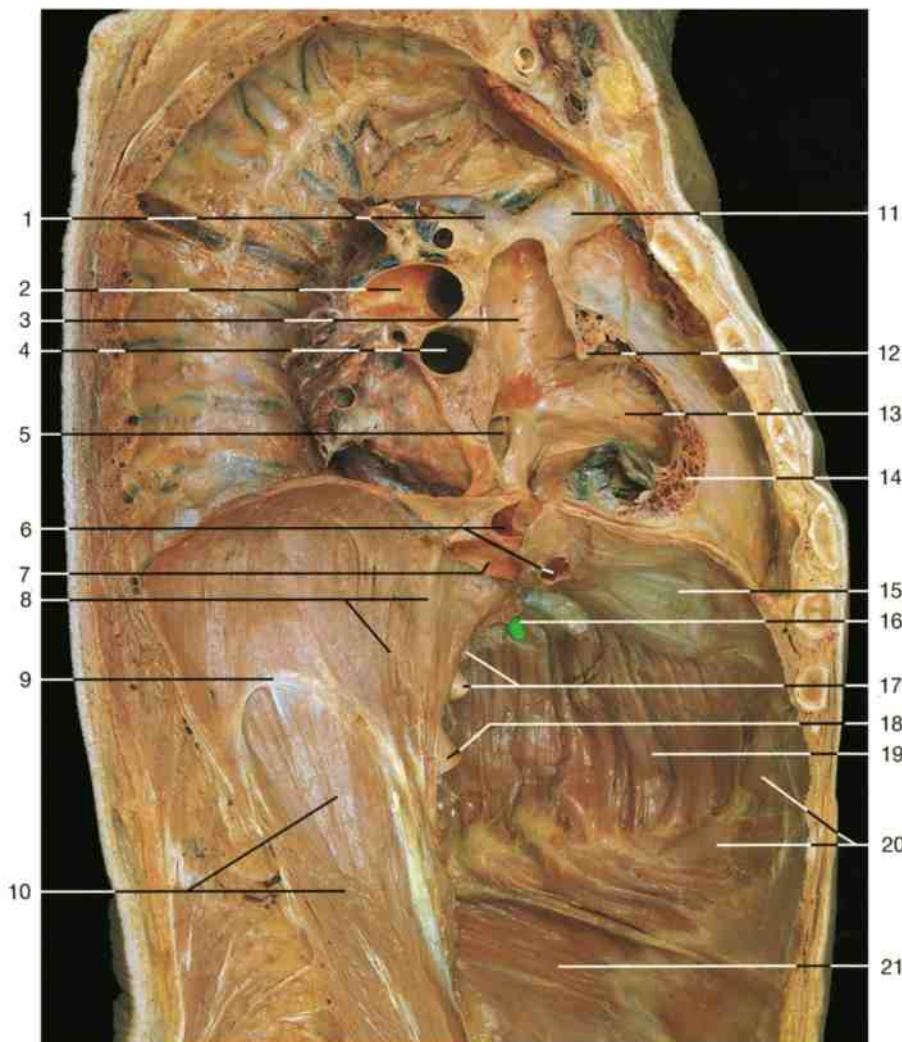

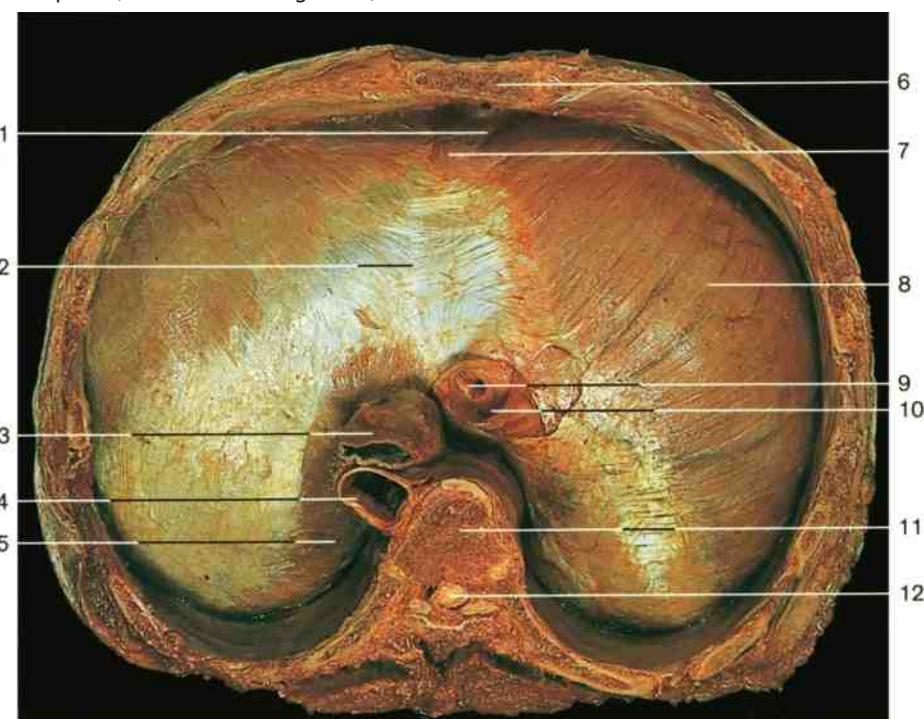

Diaphragm in situ (anterior aspect). Anterior walls of thoracic and abdominal cavities have been removed. Natural position of the heart above the central tendon on the diaphragm is shown.

Changes in the position of the diaphragm and thoracic cage during respiration. Left: lateral aspect; right: anterior aspect. During inspiration the diaphragm moves downwards and the lower part of the thoracic cage expands forward and laterally, causing the costodiaphragmatic recess (R) to enlarge (cf. dotted arrows).

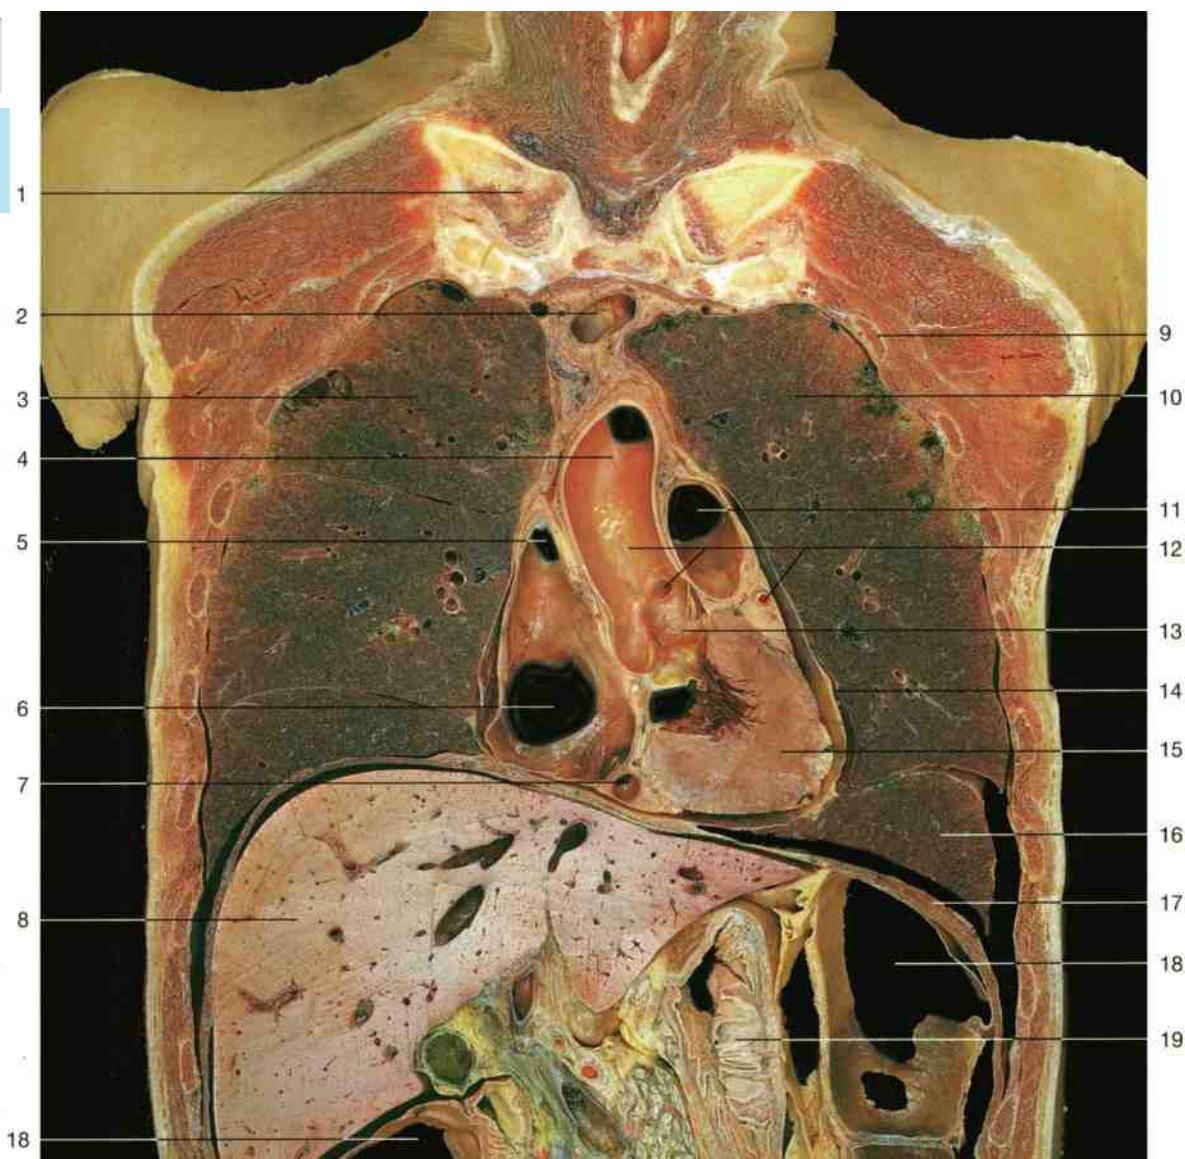

Diaphragm. Paramedian section to the right of the median plane through thoracic and upper abdominal cavities. The plane passes through the superior and inferior vena cava just to the right of the vertebral bodies. Most of the heart remains *in situ* to the left of this plane (viewed from the right side).

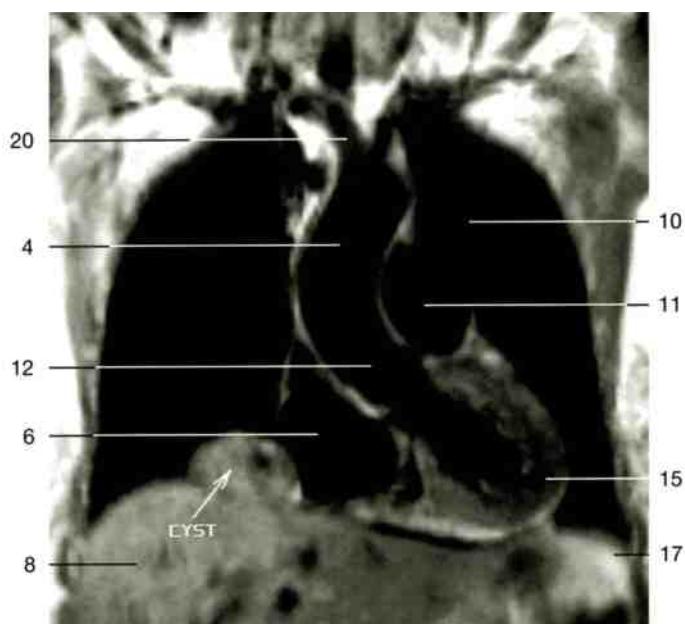

Diaphragm (superior aspect). The pleura and pericardium have been removed.

- 1 Azygos venous arch
- 2 Right pulmonary artery
- 3 Superior vena cava
- 4 Right pulmonary vein

- 10 Nipple (papilla)
- 11 Costal margin
- 12 Pectoral fascia
- 13 Mammary gland
- 14 Serratus anterior muscle (insertion)
- 15 Lactiferous sinus

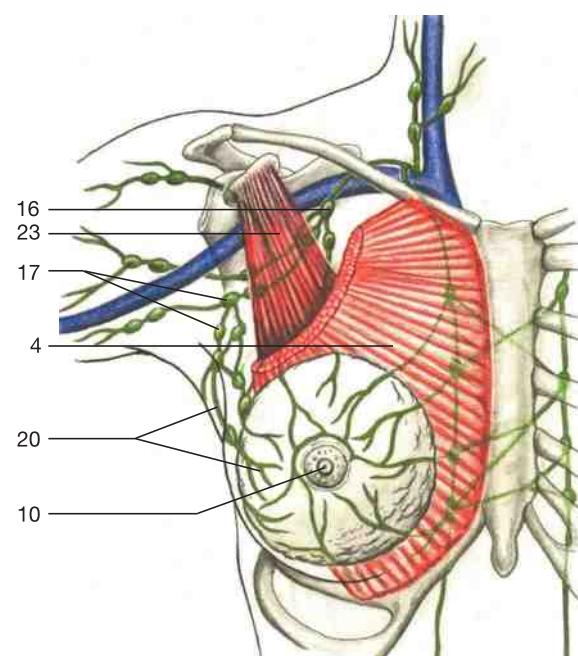

Dissection of mammary gland and axillary lymph nodes.

- 16 Apical lymph nodes
- 17 Axillary lymph nodes
- 18 Intercostobrachial nerve
- 19 Lateral thoracic vein
- 20 Lymph vessels
- 21 Serratus anterior muscle
- 22 Medial branches of intercostal arteries
- 23 Pectoralis minor muscle

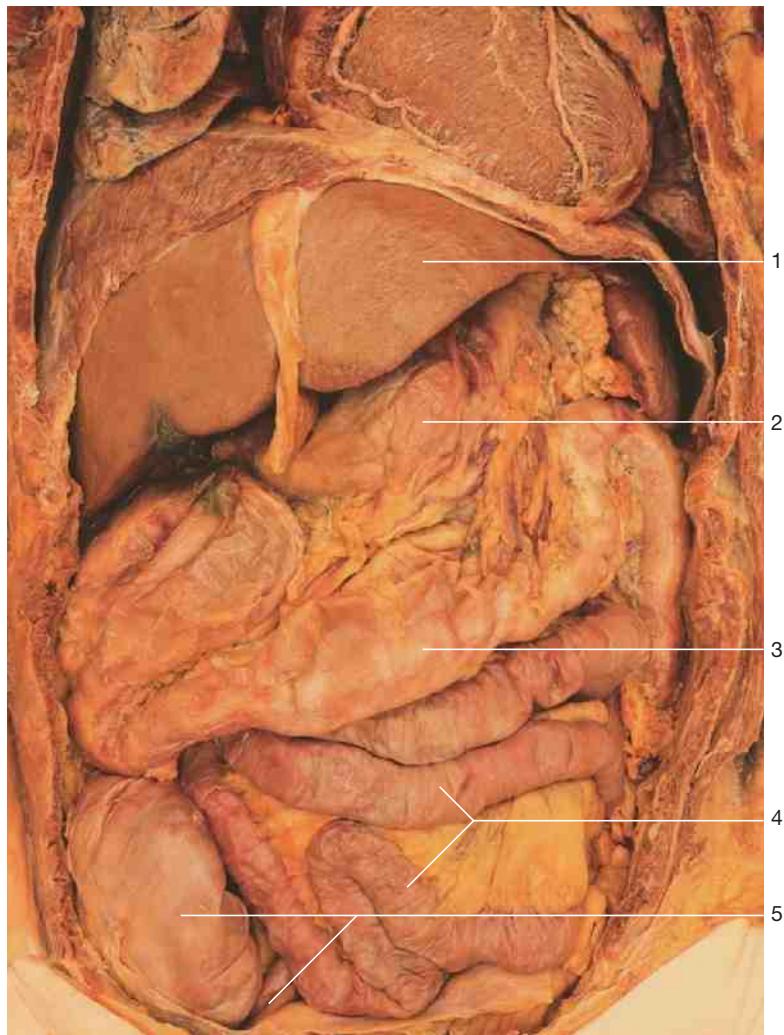

Mammary gland (sagittal section) of a pregnant female.

Lymphatics of the breast and axilla. Most lymph vessels drain into the axillary lymph nodes.

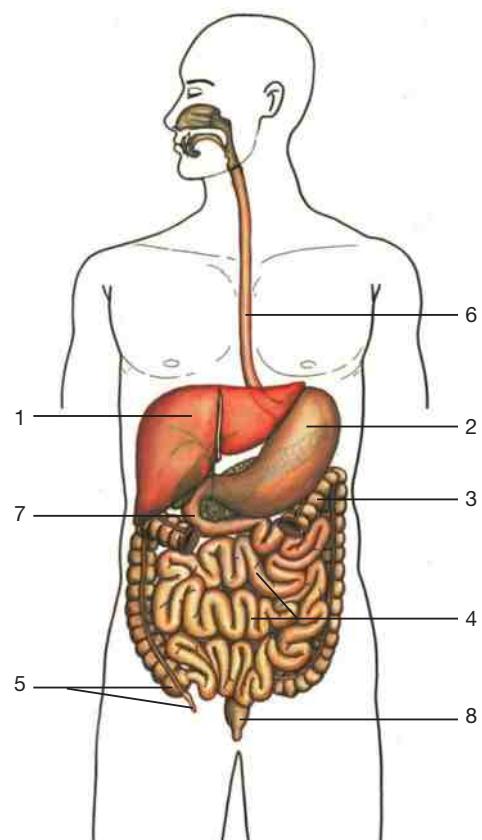

5 Abdominal Organs

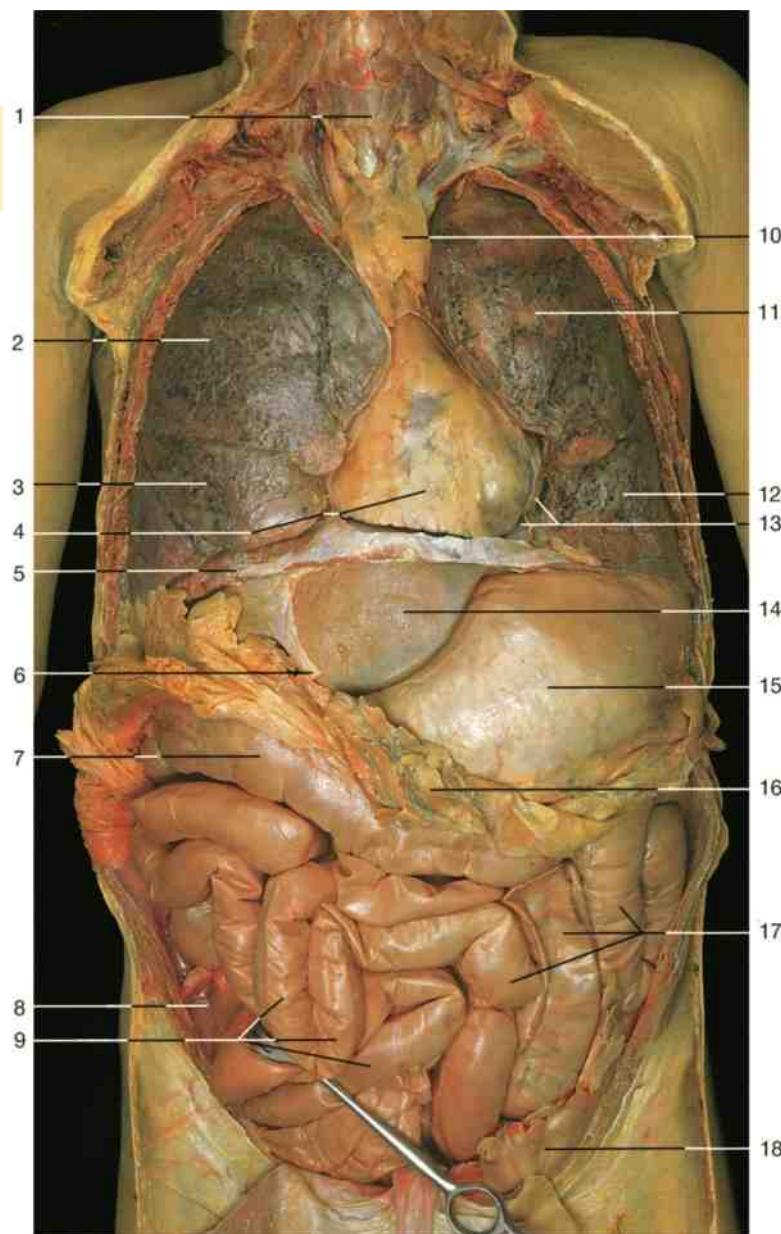

Abdominal organs in situ (anterior aspect). The greater omentum and part of the diaphragm have been removed. The heart is in contact with the diaphragm (from Lütjen-Drecoll, Rohen, Innenansichten des menschlichen Körpers, 2010).

- 1 Liver
- 2 Stomach
- 3 Transverse colon
- 4 Small intestine
- 5 Hindgut (cecum) with vermicular appendix
- 6 Esophagus
- 7 Duodenum
- 8 Rectum

The abdominal cavity located underneath the diaphragm contains the main organs of the digestive system (liver, spleen, stomach, intestine). The greater omentum partly fixed to the transverse colon covers the small intestine. The liver, stomach, and superior part of the duodenum are connected to the lesser omentum covering the omental bursa, the entrance of which is the epiploic foramen. The hepatoduodenal ligament contains the portal vein, the common bile duct, and the hepatic arteries. The spleen is located dorsally underneath the diaphragm.

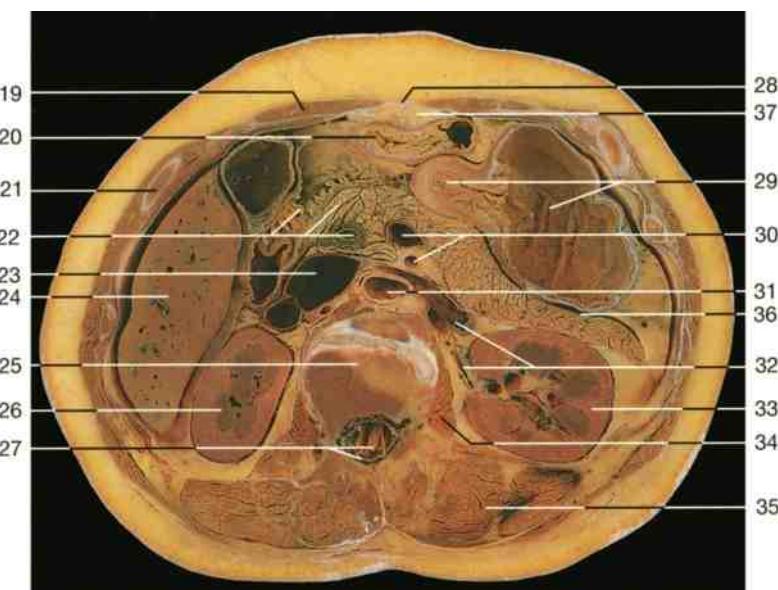

Organization of the digestive system (anterior aspect). Position of the abdominal organs.

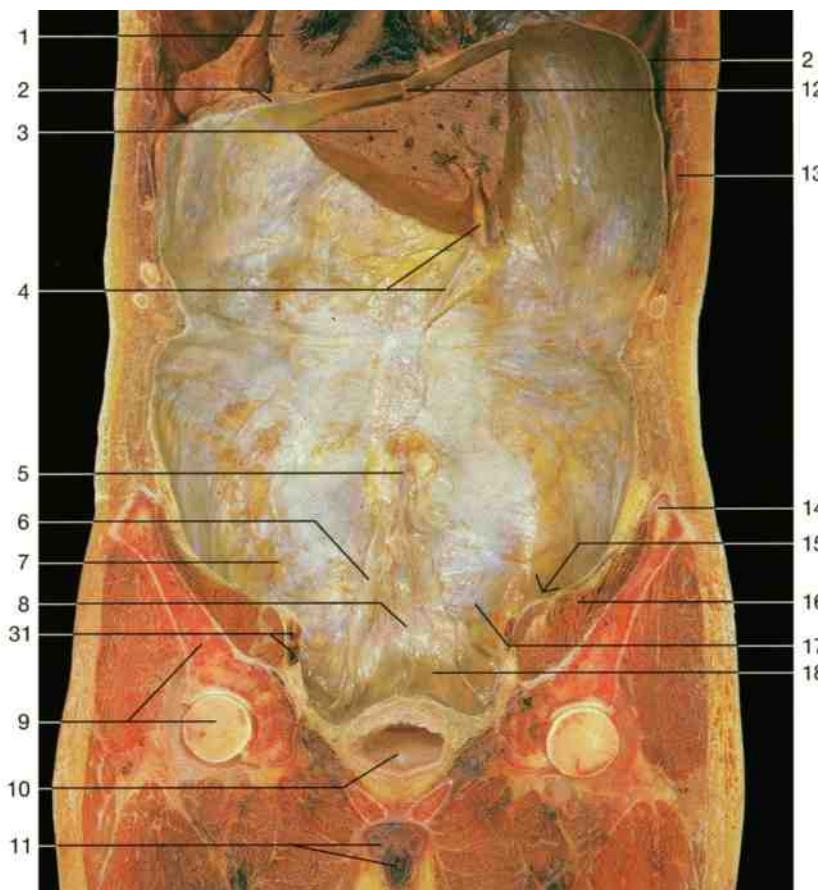

- 1 Thyroid gland
- 2 Upper lobe of right lung
- 3 Middle lobe of right lung
- 4 Heart
- 5 Diaphragm
- 6 Round ligament of liver (ligamentum teres)
- 7 Transverse colon
- 8 Cecum
- 9 Small intestine (ileum)
- 10 Thymus
- 11 Upper lobe of left lung
- 12 Lower lobe of left lung
- 13 Pericardium (cut edge)
- 14 Liver (left lobe)
- 15 Stomach
- 16 Greater omentum
- 17 Small intestine (jejunum)
- 18 Sigmoid colon
- 19 Rectus abdominis muscle
- 20 Small intestine (section)
- 21 Rib
- 22 Common bile duct, duodenum, and pancreas
- 23 Inferior vena cava
- 24 Liver
- 25 Body of second lumbar vertebra
- 26 Right kidney
- 27 Cauda equina and dura mater
- 28 Linea alba
- 29 Stomach and pylorus
- 30 Superior mesenteric artery and vein
- 31 Abdominal aorta
- 32 Left renal artery and vein
- 33 Left kidney
- 34 Psoas major muscle
- 35 Deep muscles of the back
- 36 Pancreas adjacent to lesser sac (omental bursa)
- 37 Falciform ligament with ligamentum teres

Abdominal organs in situ. The greater omentum has been partly removed or reflected.

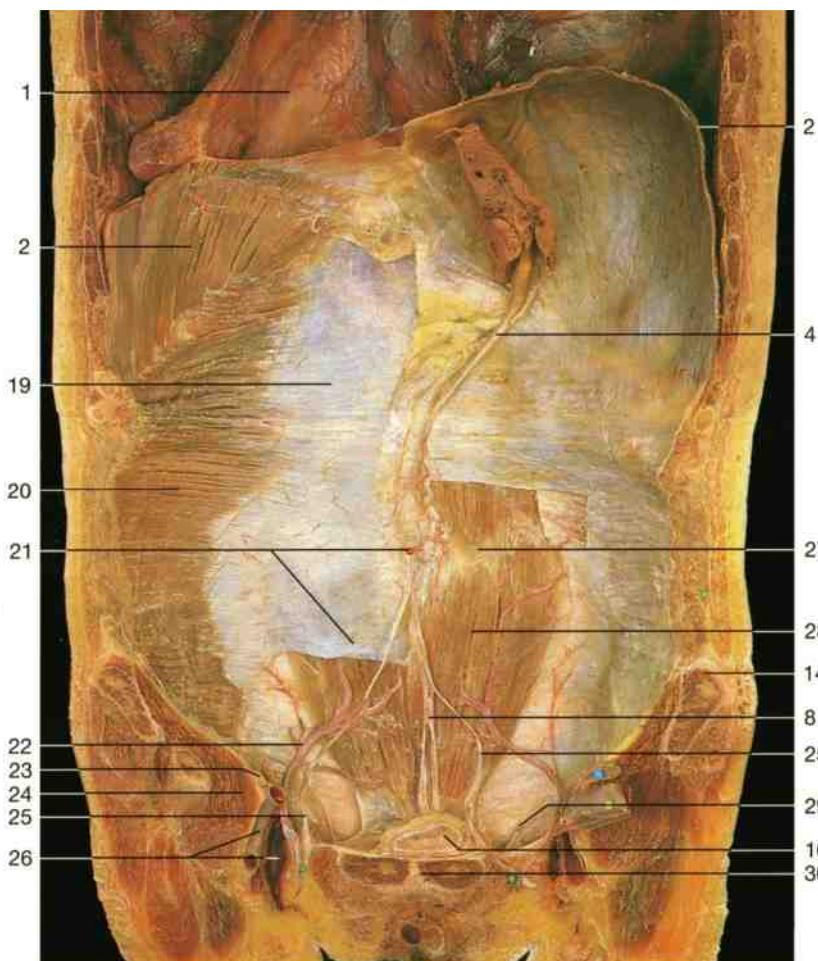

Transverse section through the abdominal cavity at the level of the second lumbar vertebra (from below).

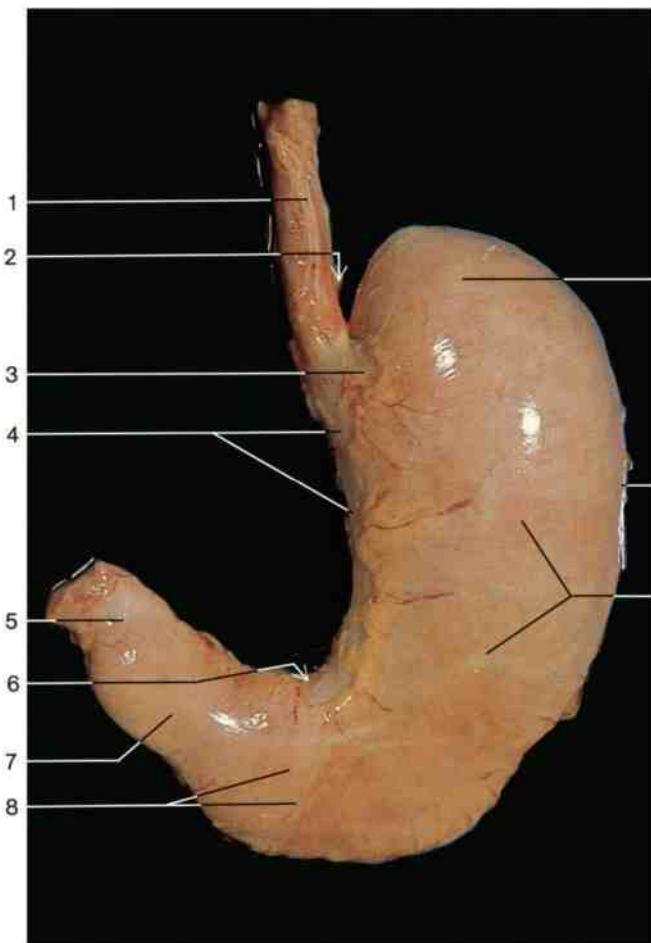

Anterior abdominal wall with pelvic cavity and thigh (frontal section, male) (internal aspect).

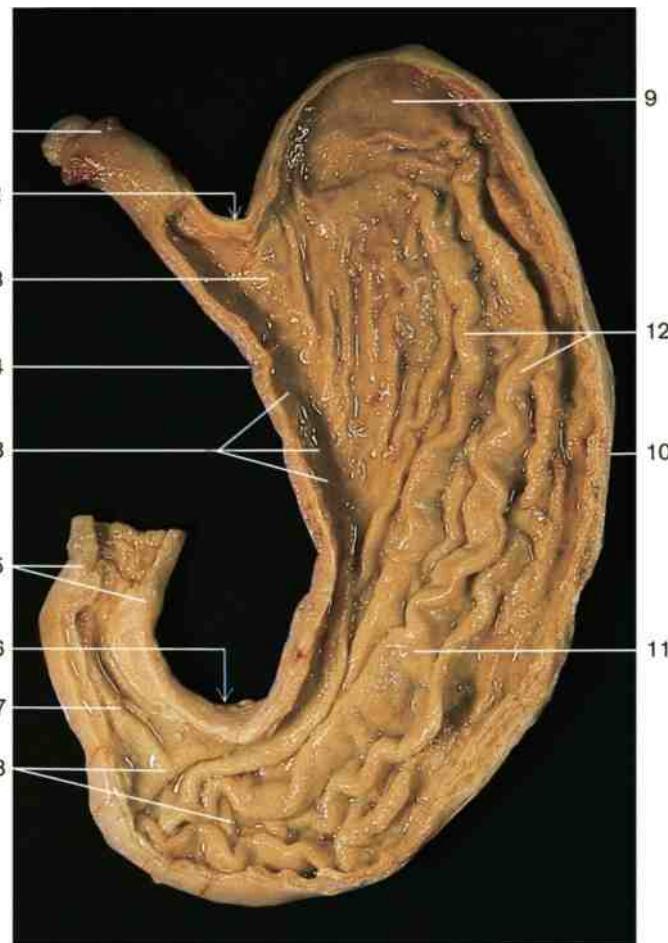

- 1 Left ventricle with pericardium
- 2 Diaphragm
- 3 Remnant of liver
- 4 Ligamentum teres
(free margin of falciform ligament)
- 5 Site of umbilicus
- 6 Medial umbilical fold
(containing the obliterated umbilical artery)
- 7 Lateral umbilical fold (containing inferior epigastric artery and vein)
- 8 Median umbilical fold
(containing remnant of urachus)
- 9 Head of femur and pelvic bone
- 10 Urinary bladder
- 11 Root of penis
- 12 Falciform ligament of liver
- 13 Rib (divided)
- 14 Iliac crest (divided)
- 15 Site of deep inguinal ring and lateral inguinal fossa
- 16 Iliopsoas muscle (divided)
- 17 Medial inguinal fossa
- 18 Supravesical fossa
- 19 Posterior layer of rectus sheath
- 20 Transversus abdominis muscle
- 21 Umbilicus and arcuate line
- 22 Inferior epigastric artery
- 23 Femoral nerve
- 24 Iliopsoas muscle
- 25 Remnant of umbilical artery
- 26 Femoral artery and vein
- 27 Tendinous intersection of rectus abdominis muscle
- 28 Rectus abdominis muscle
- 29 Interfoveolar ligament
- 30 Pubic symphysis (divided)
- 31 External iliac artery and vein

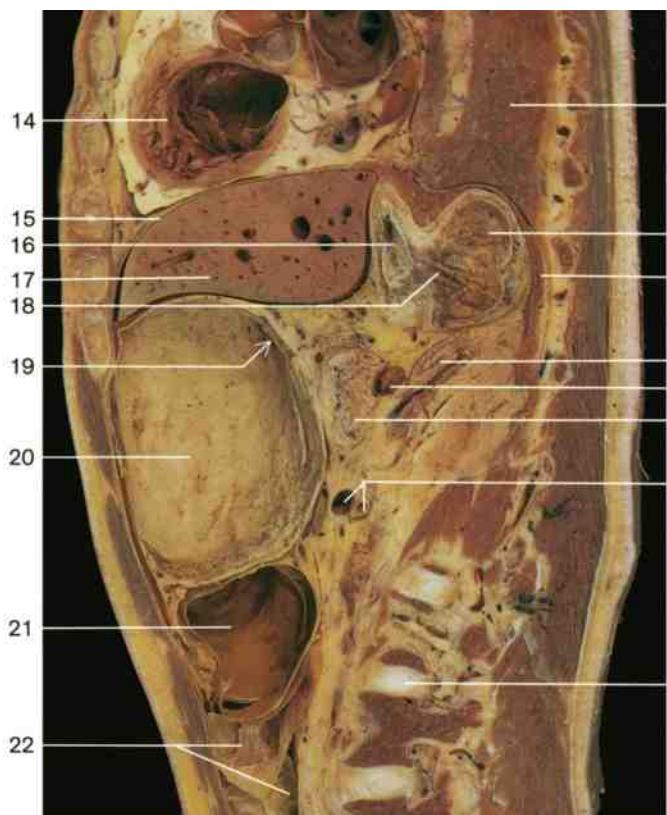

Anterior abdominal wall (male) (internal aspect). The peritoneum and parts of the posterior layer of rectus sheath have been removed. Dissection of inferior epigastric arteries and veins.

Stomach (ventral aspect).

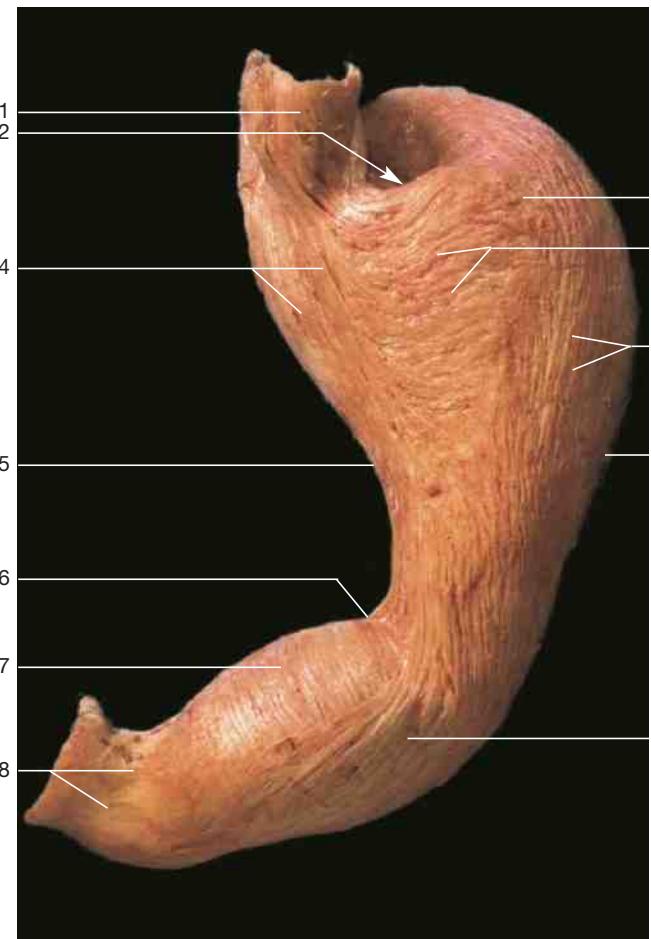

Mucosa of posterior wall of stomach (ventral aspect).

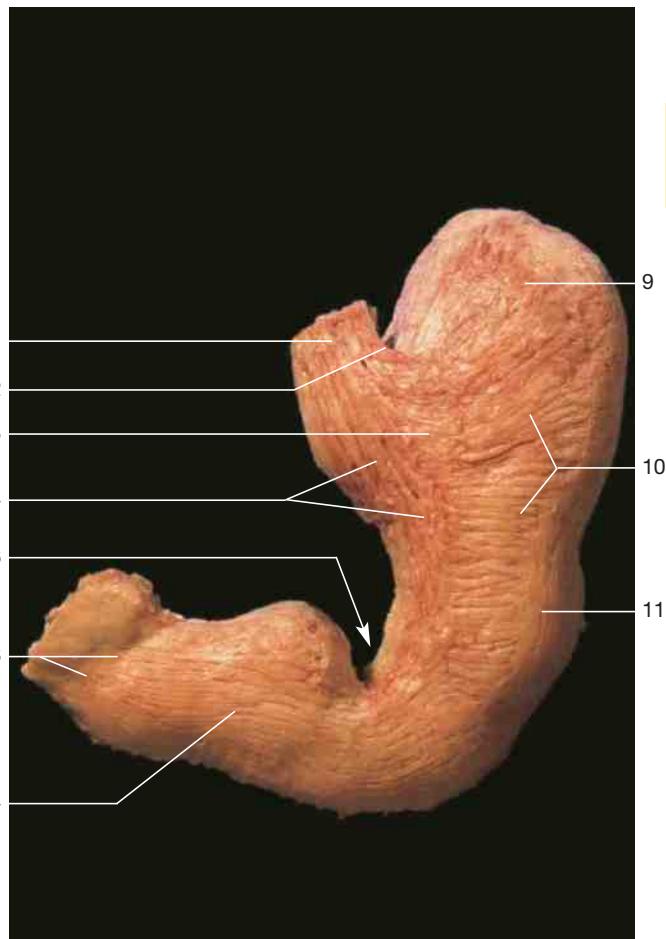

Position of the stomach. Parasagittal section through upper part of left abdominal cavity 3.5 cm lateral to median plane.

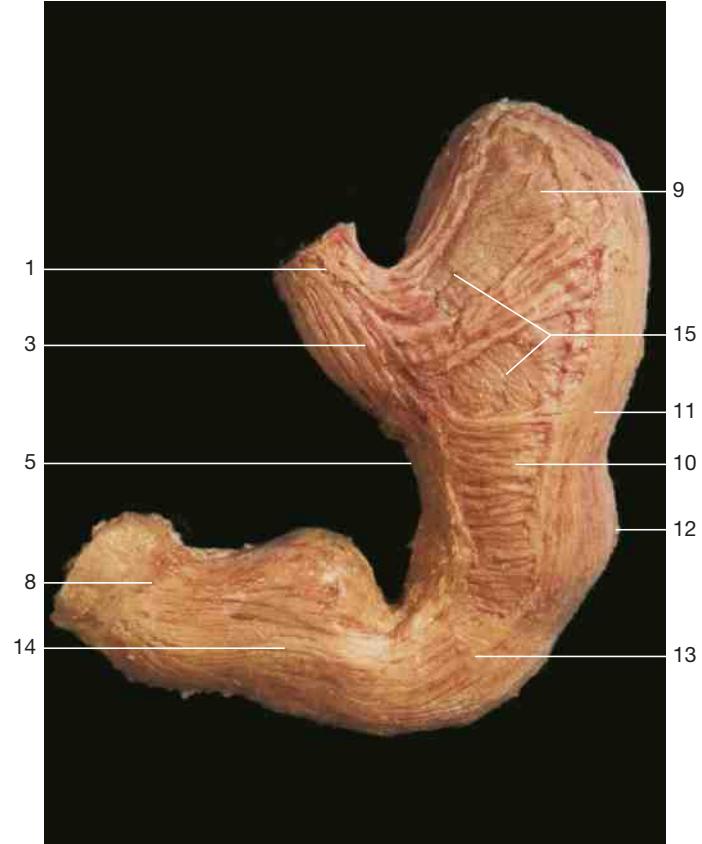

- 1 Esophagus
- 2 Cardial notch
- 3 Cardial part of stomach
- 4 Lesser curvature of stomach
- 5 Pyloric sphincter
- 6 Angular notch (incisura angularis)
- 7 Pyloric canal
- 8 Pyloric antrum
- 9 Fundus of stomach
- 10 Greater curvature of stomach
- 11 Body of stomach
- 12 Folds of mucous membrane (gastric rugae)
- 13 Gastric canal
- 14 Right ventricle of heart
- 15 Diaphragm (cut edge)
- 16 Abdominal portion of esophagus
- 17 Liver
- 18 Cardial part of stomach (cut edge)
- 19 Position of pyloric canal
- 20 Body of stomach
- 21 Transverse colon
- 22 Small intestine
- 23 Lung (cut edge)
- 24 Fundus of stomach (section)
- 25 Lumbar portion of diaphragm (cut edge)
- 26 Suprarenal gland
- 27 Splenic vein
- 28 Pancreas
- 29 Superior mesenteric artery and vein
- 30 Intervertebral disc

Muscular coat of stomach, outer layer (ventral aspect).

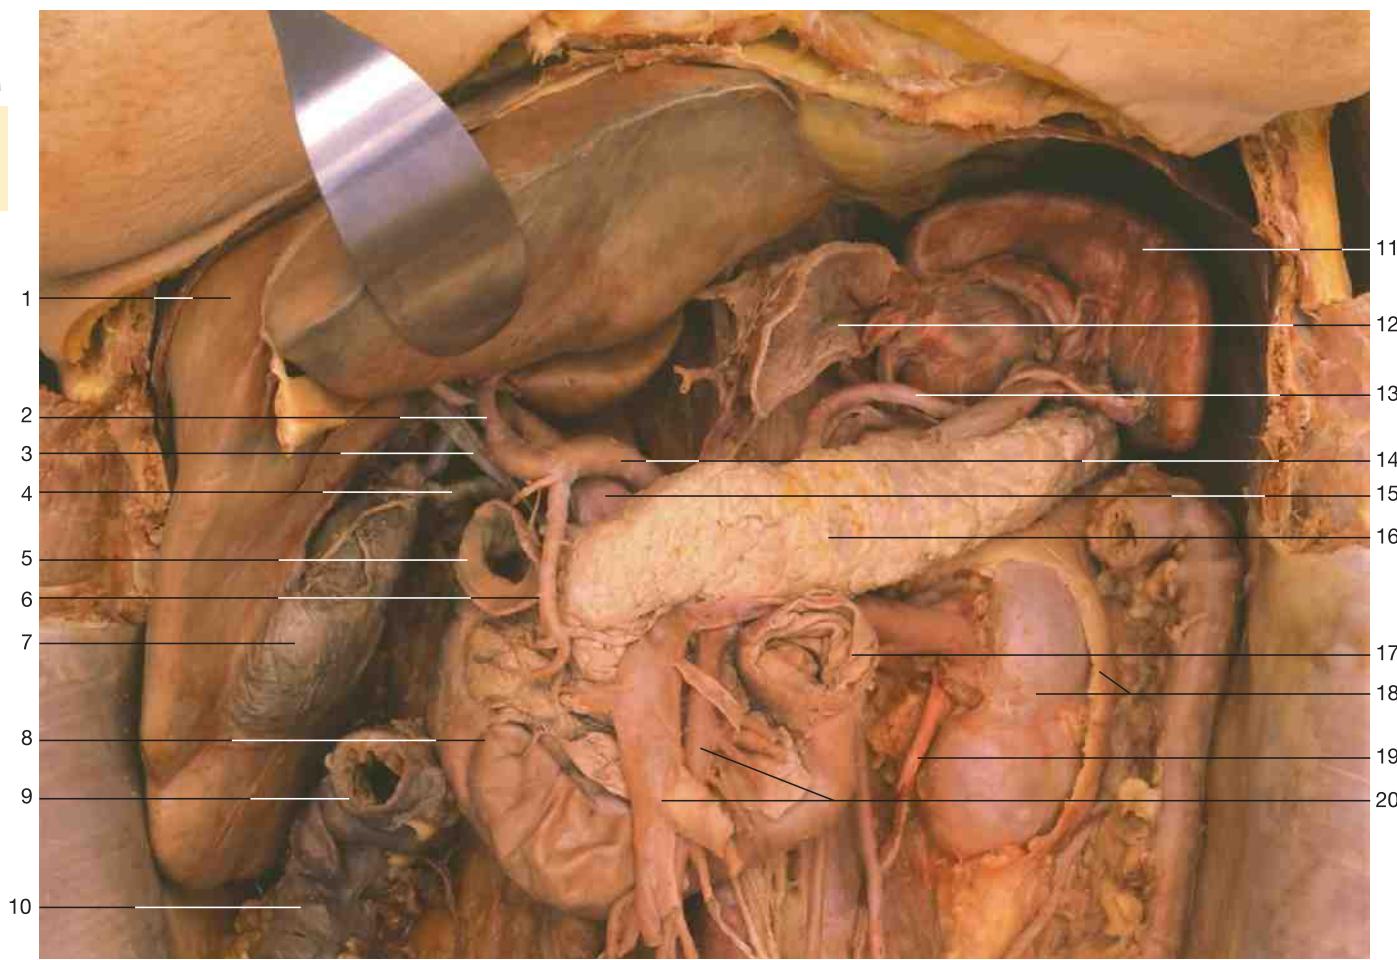

Muscular coat of stomach, middle layer (ventral aspect).

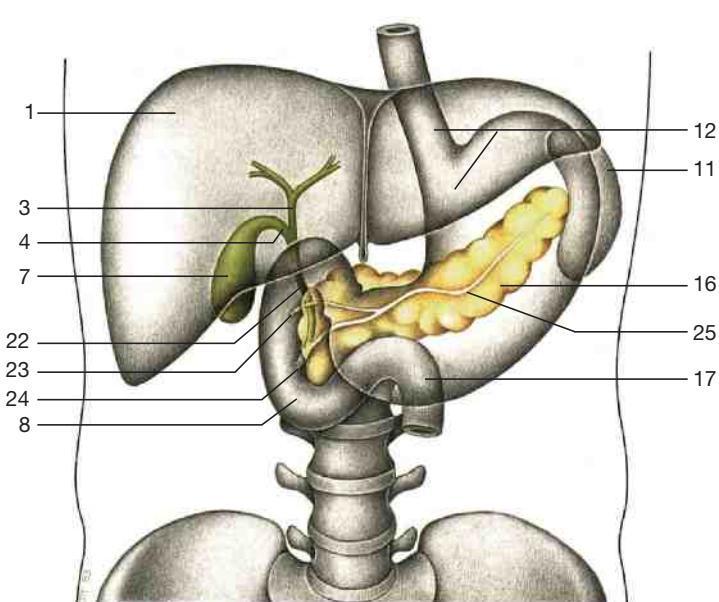

Muscular coat of stomach, inner layer (ventral aspect).

- 1 Esophagus (abdominal part)
- 2 Cardial notch
- 3 Cardial part of stomach
- 4 Longitudinal muscle layer at lesser curvature of stomach
- 5 Lesser curvature
- 6 Incisura angularis
- 7 Circular muscle layer of pyloric part of stomach
- 8 Pyloric sphincter muscle
- 9 Fundus of stomach
- 10 Circular muscle layer of fundus of stomach
- 11 Longitudinal muscle layer of greater curvature of stomach
- 12 Greater curvature of stomach
- 13 Longitudinal muscle layer (transition from body to pyloric part of stomach)
- 14 Pyloric part of stomach
- 15 Oblique muscle fibers

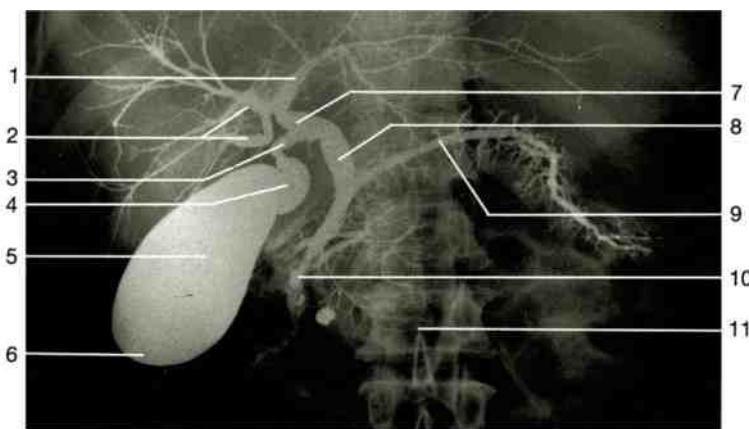

Upper abdominal organs. Pancreas, duodenum, and left kidney are shown. Stomach and transverse colon have been removed, liver elevated; superior mesenteric vein is slightly enlarged.

Pancreas, duodenum, and extrahepatic bile ducts (anterior aspect, schematic drawing).

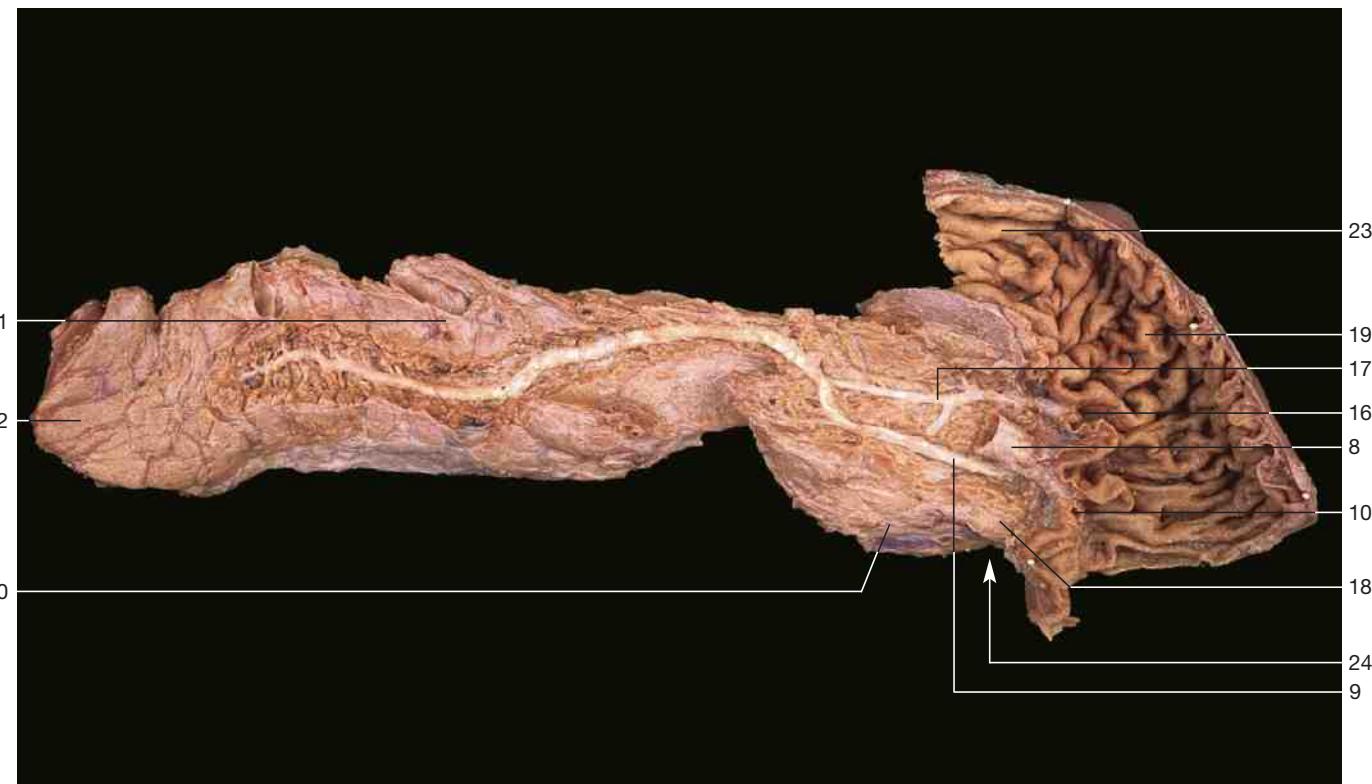

- 1 Liver
- 2 Hepatic artery proper
- 3 Hepatic duct
- 4 Cystic duct
- 5 Pylorus
- 6 Gastroduodenal artery
- 7 Gallbladder
- 8 Duodenum
- 9 Transverse colon (cut)
- 10 Ascending colon
- 11 Spleen
- 12 Cardia
- 13 Splenic artery
- 14 Common hepatic artery
- 15 Portal vein
- 16 Pancreas (body)
- 17 Duodenojejunal flexure
- 18 Kidney (with capsula adiposa)
- 19 Ureter
- 20 Superior mesenteric artery and vein
- 21 Aorta (abdominal part)
- 22 Common bile duct
- 23 Lesser duodenal papilla
- 24 Greater duodenal papilla
- 25 Pancreatic duct

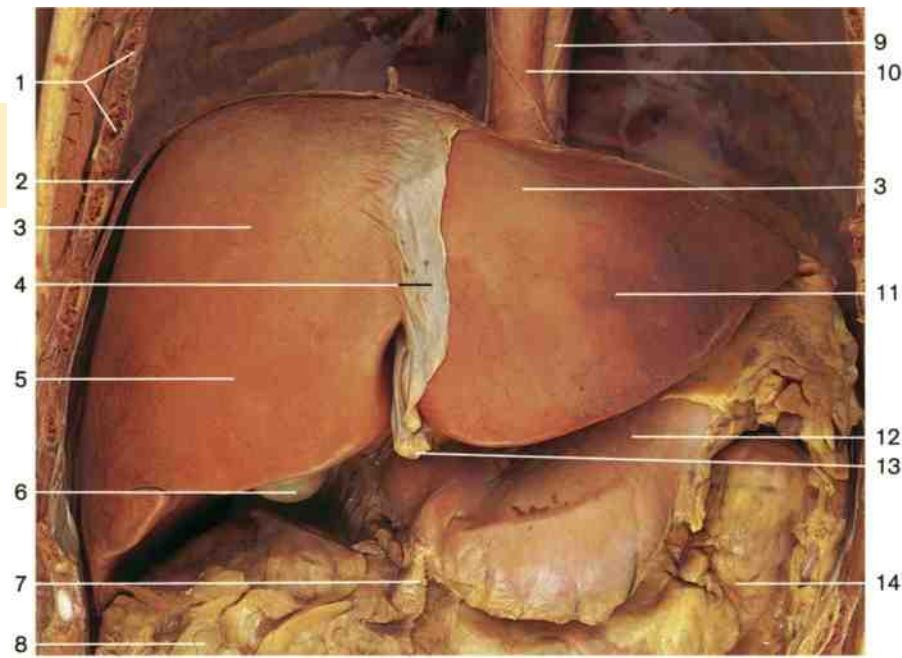

Radiograph of biliary ducts, gallbladder, and pancreatic duct (antero-posterior view).

Isolated gallbladder and cystic duct (anterior aspect).
The gallbladder has been opened to display the mucous membrane.

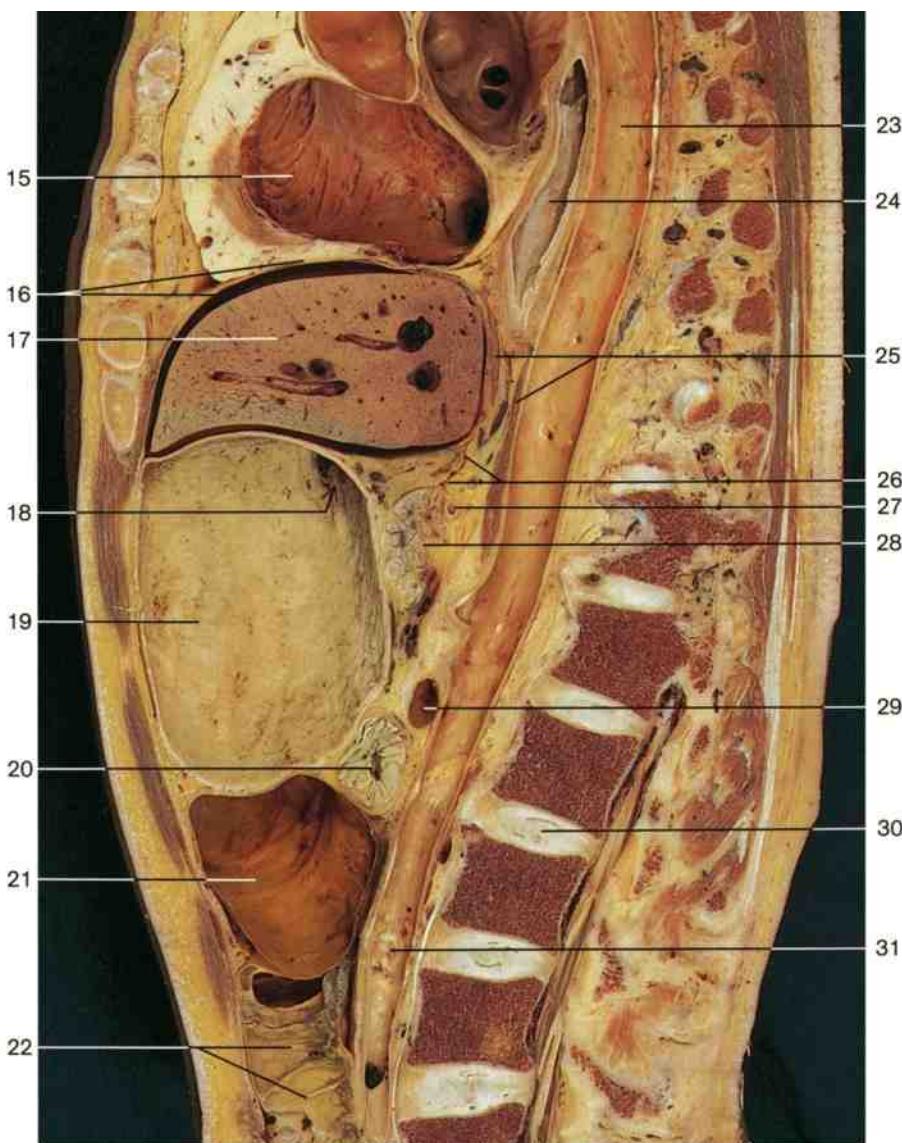

Pancreas with descending part of duodenum (posterior aspect). The duodenum was opened to display the duodenal papillae. Pancreatic duct has been dissected, the common bile duct has been divided. The sphincter of Oddi is shown.

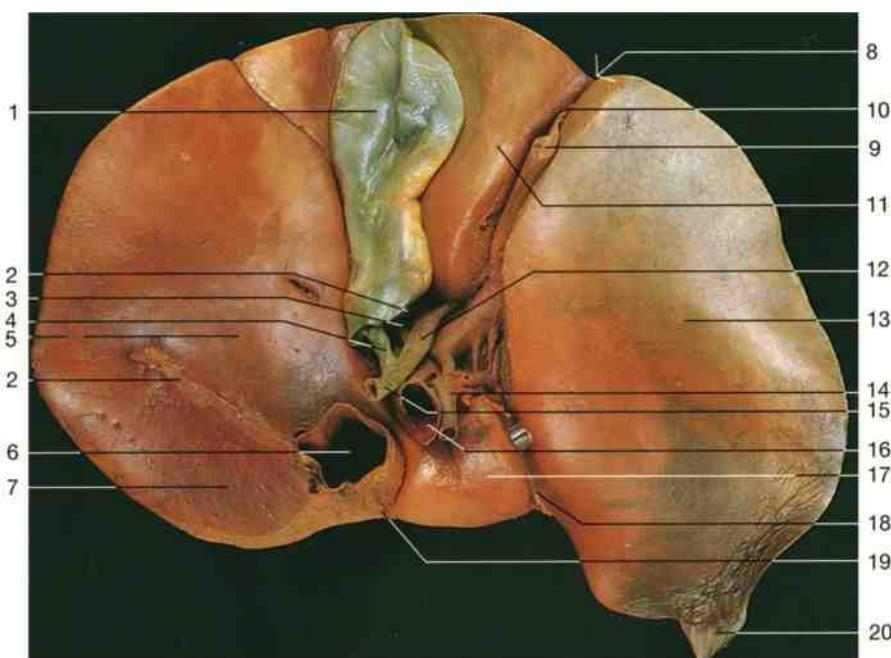

Liver *in situ* (ventral aspect). Part of the diaphragm has been removed.

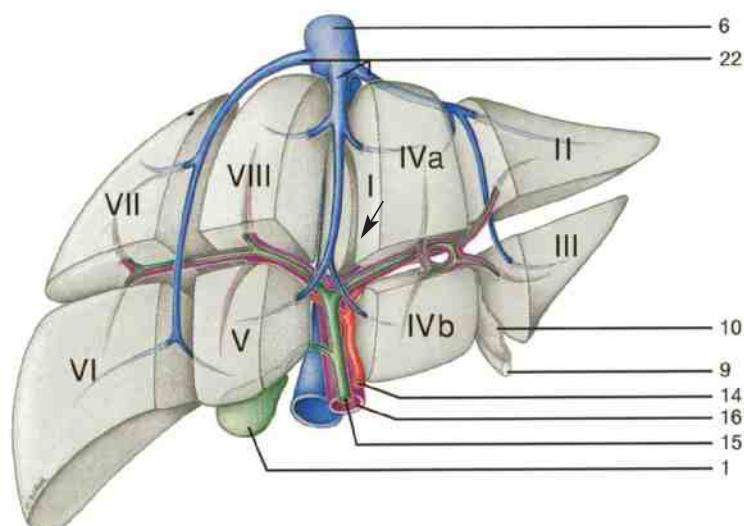

- 1 Ribs (cut edges)
- 2 Diaphragm
- 3 Diaphragmatic surface of liver
- 4 Falciform ligament of liver
- 5 Right lobe of liver
- 6 Fundus of gallbladder
- 7 Gastrocolic ligament
- 8 Greater omentum
- 9 Aorta
- 10 Esophagus
- 11 Left lobe of liver
- 12 Stomach
- 13 Ligamentum teres
- 14 Transverse colon
- 15 Right atrium of heart
- 16 Central tendon and sternal portion of diaphragm
- 17 Liver (cut edge)
- 18 Entrance to duodenum (pylorus)
- 19 Stomach
- 20 Duodenum
- 21 Transverse colon (divided, dilated)
- 22 Small intestine
- 23 Thoracic aorta (longitudinally divided)
- 24 Esophagus (longitudinally divided)
- 25 Esophageal hiatus of diaphragm
- 26 Omental bursa (lesser sac)
- 27 Splenic artery
- 28 Pancreas
- 29 Left renal vein
- 30 Intervertebral disc
- 31 Abdominal aorta (longitudinally divided)

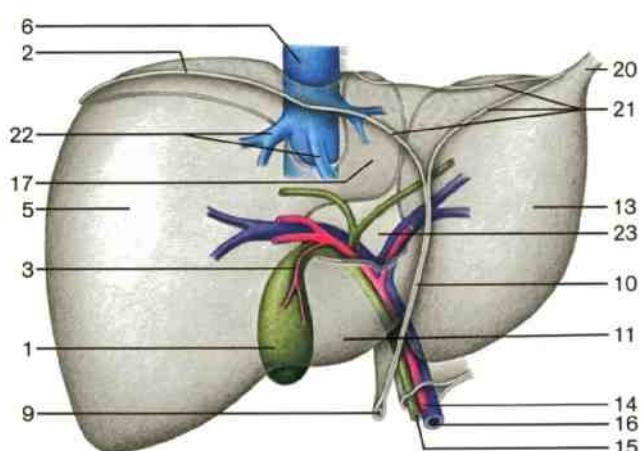

Liver *in situ*. Parasagittal section through the left side of the abdomen 2 cm lateral to median plane.

Liver (inferior aspect). Dissection of porta hepatis. Gallbladder partly collapsed.
Ventral margin of liver above.

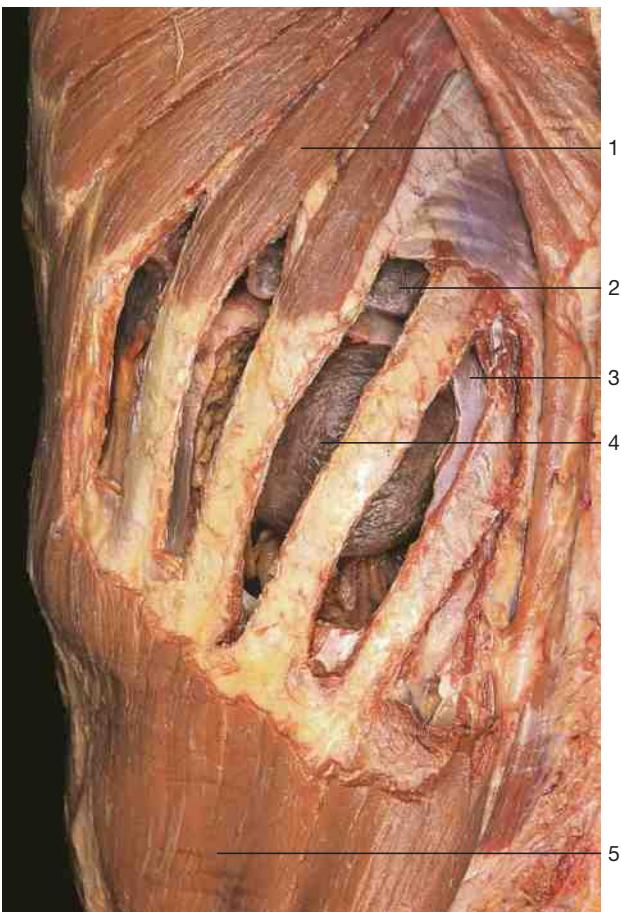

Segmentation of the liver (anterior aspect). Liver segments indicated by Roman numerals.

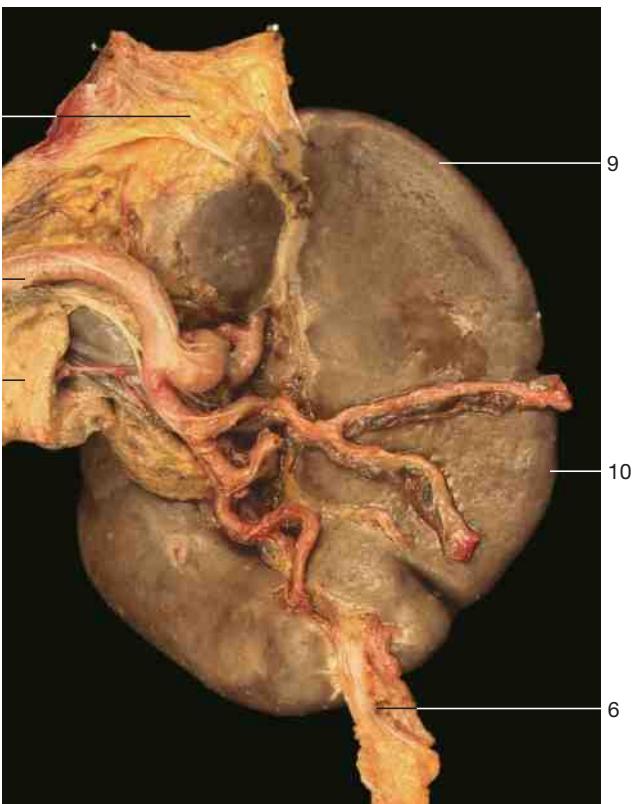

Liver (ventral aspect) (transparent drawing illustrating margins of peritoneal folds).

- 1 Fundus of gallbladder
- 2 Peritoneum (cut edges)
- 3 Cystic artery
- 4 Cystic duct
- 5 Right lobe of liver
- 6 Inferior vena cava
- 7 Bare area of liver
- 8 Notch for ligamentum teres and falciform ligament
- 9 Ligamentum teres
- 10 Falciform ligament of liver
- 11 Quadrat lobe of liver
- 12 Common hepatic duct
- 13 Left lobe of liver
- 14 Hepatic artery proper
- 15 Common bile duct } Portal triad
- 16 Portal vein
- 17 Caudate lobe of liver
- 18 Ligamentum venosum
- 19 Ligament of inferior vena cava
- 20 Appendix fibrosa (left triangular ligament)
- 21 Coronary ligament of liver
- 22 Hepatic veins
- 23 Porta hepatis

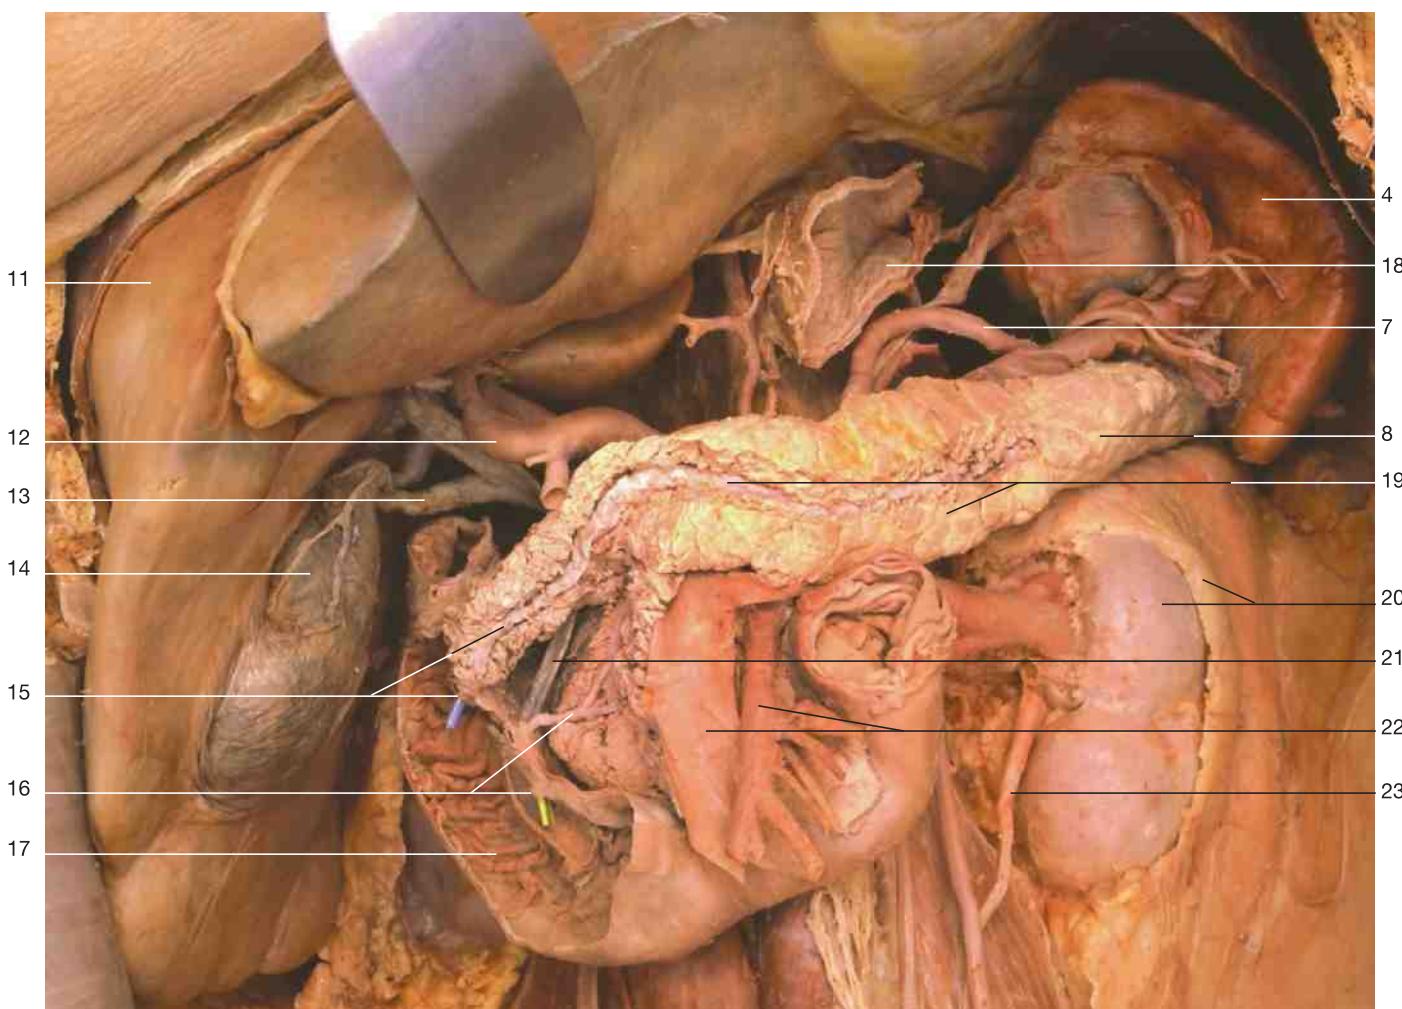

It should be noted that the anatomical left and right lobes of the liver do not reflect the internal distribution of the hepatic artery, portal vein, and biliary ducts. With these structures, used as criteria, the left lobe includes both the caudate and quadrate lobes, and thus the line dividing the liver into left and right functional lobes passes through the gallbladder and inferior vena cava. The three main hepatic veins drain segments of the liver that have no visible external markings.

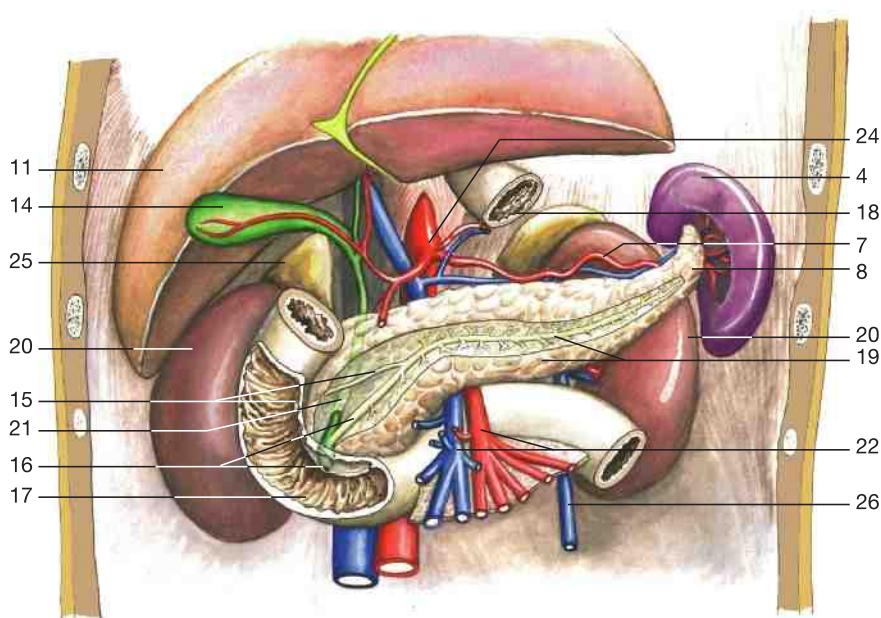

Location of the spleen in situ (left-lateral aspect).
Intercostal spaces and diaphragm have been fenestrated.

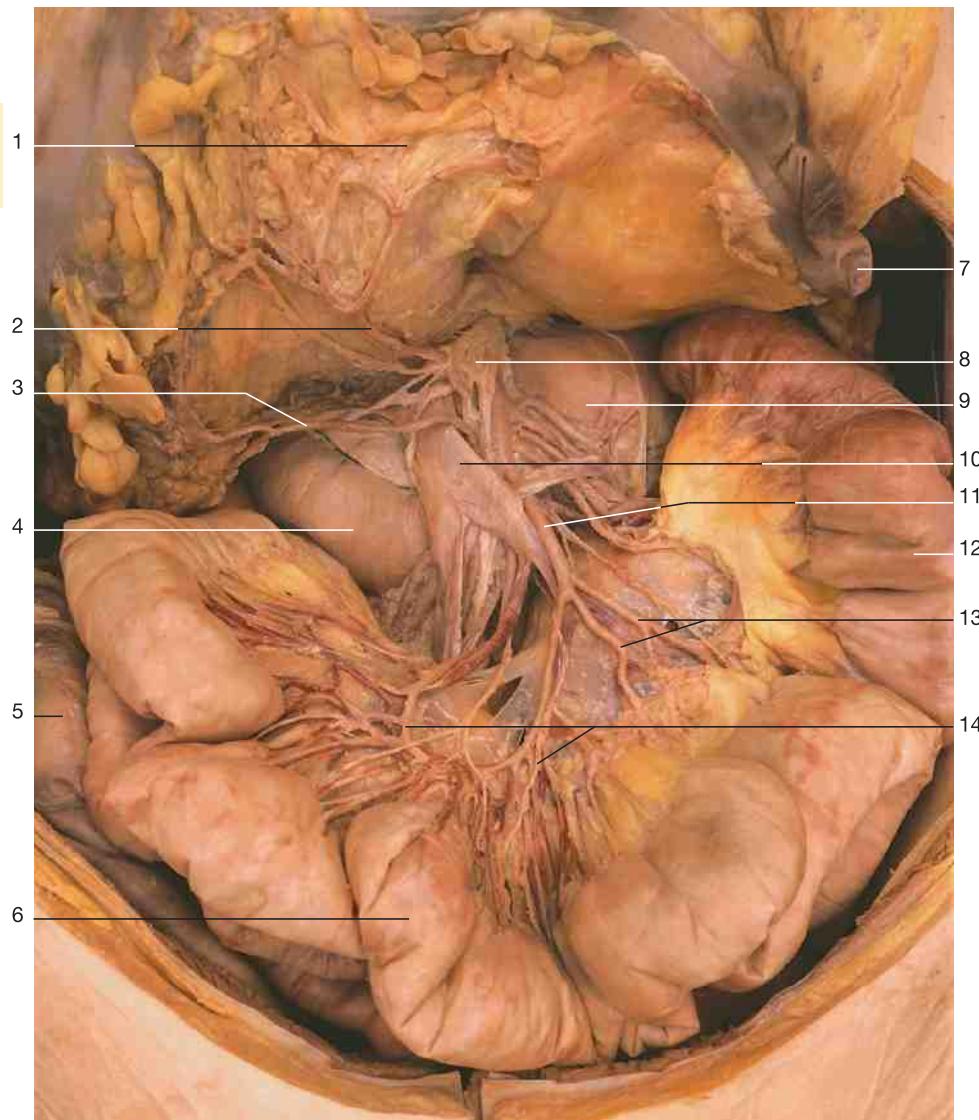

Spleen (visceral surface), hilum of spleen with vessels, nerves, and ligaments.

Upper abdominal organs (anterior aspect). Stomach and transverse colon have been removed, the duodenum fenestrated. The liver has been elevated to show the extrahepatic bile ducts. In this case the accessory pancreatic duct represents the main excretory duct of the pancreas.

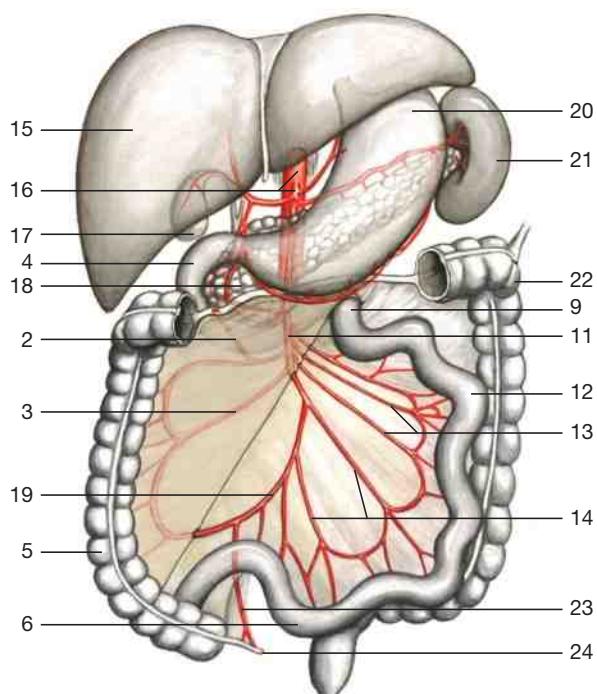

Upper abdominal organs (anterior aspect). The schematic drawing shows the most common situation of the pancreatic ducts.

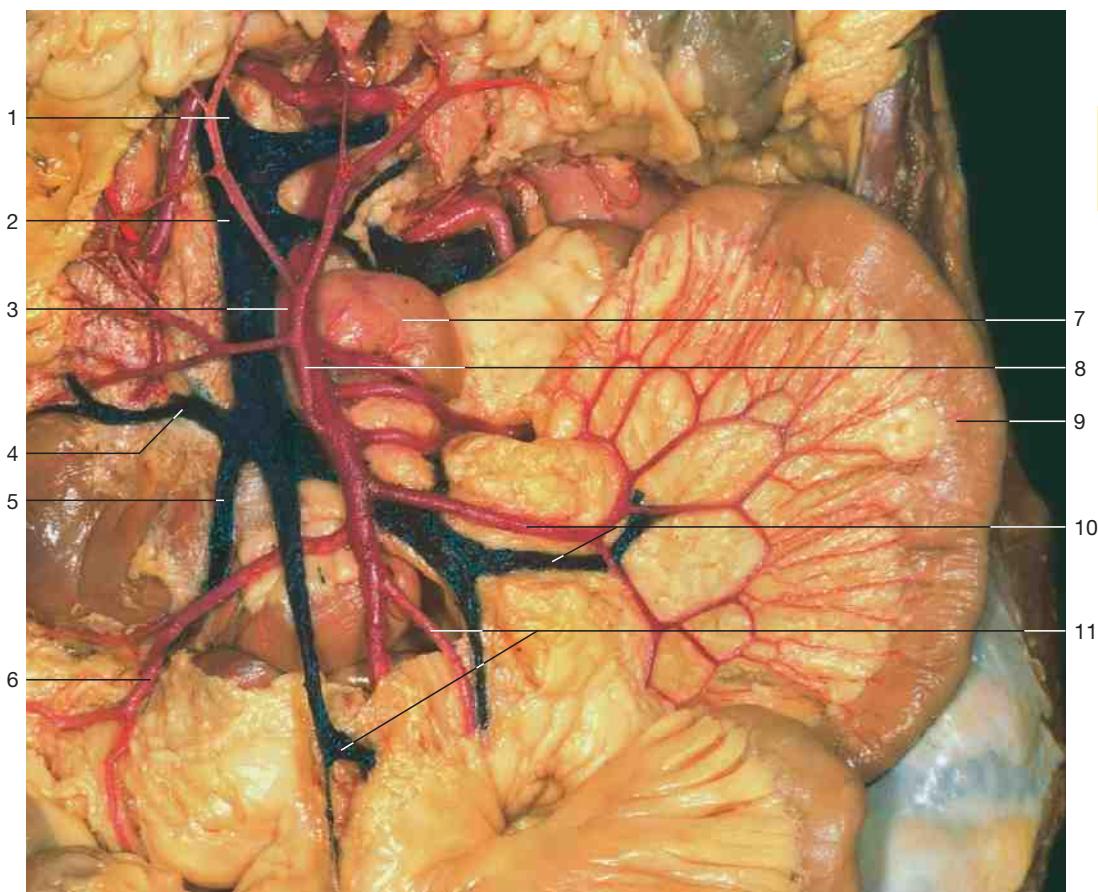

- 1 Greater omentum
- 2 Middle colic artery
- 3 Right colic artery
- 4 Duodenum
- 5 Ascending colon
- 6 Ileum
- 7 Transverse colon

Superior mesenteric artery in relation to pancreas and duodenum. Stomach and transverse colon have been removed and the liver elevated. Note the location of the spleen. A yellow probe is inserted through the omental foramen.

Main branches of superior and inferior mesenteric arteries (schematic drawing). Arrow = Riolan's anastomosis.

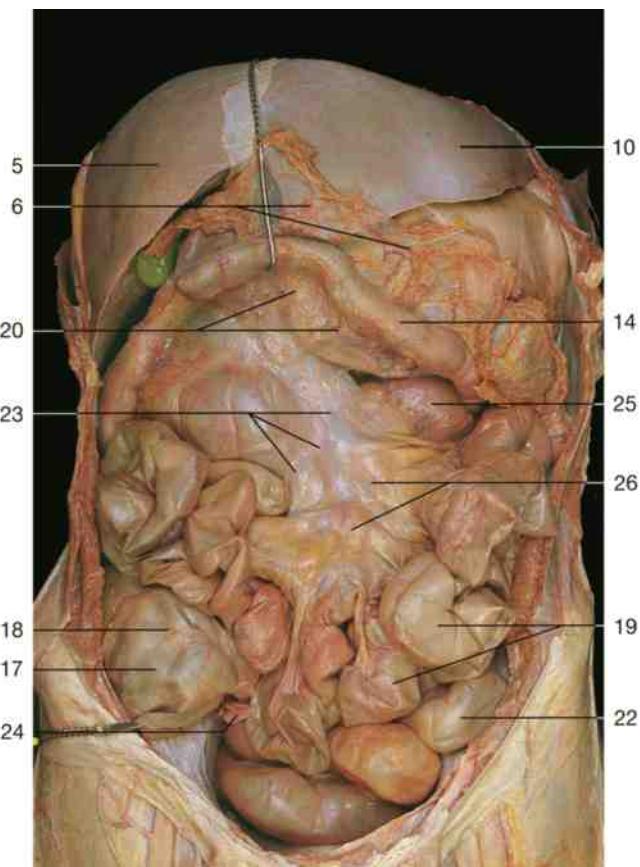

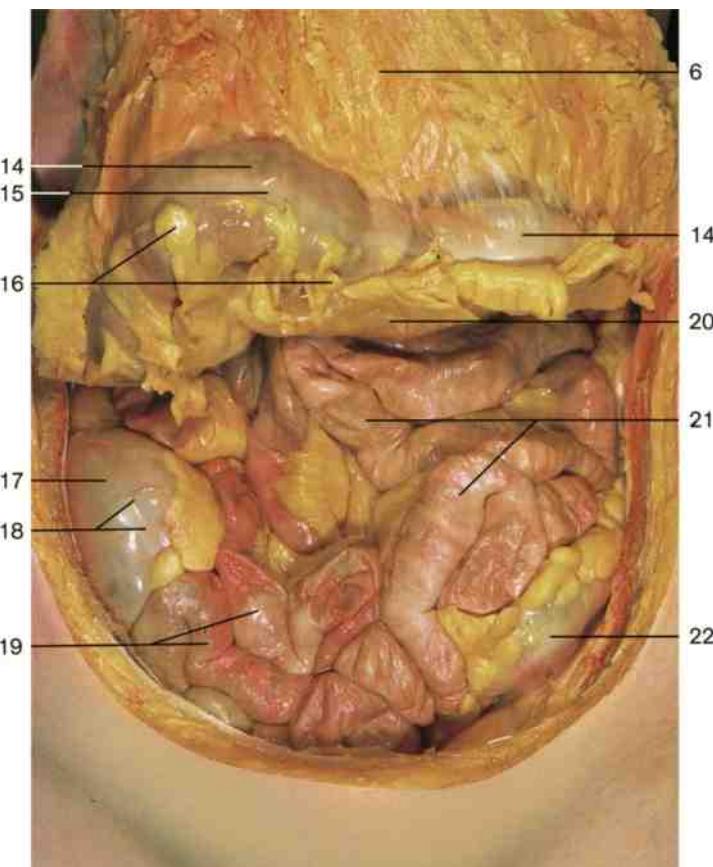

Vessels of the retroperitoneal organs. Direction of the inferior mesenteric artery and its anastomosis with the middle colic artery (arrow = Riolan's anastomosis). Greater omentum and transverse colon have been reflected, the intestine partly removed. The normally retrocecal located vermiform appendix has been replaced anteriorly. The right common iliac artery is partly obstructed by a blood thrombus.

6 Retroperitoneal Organs

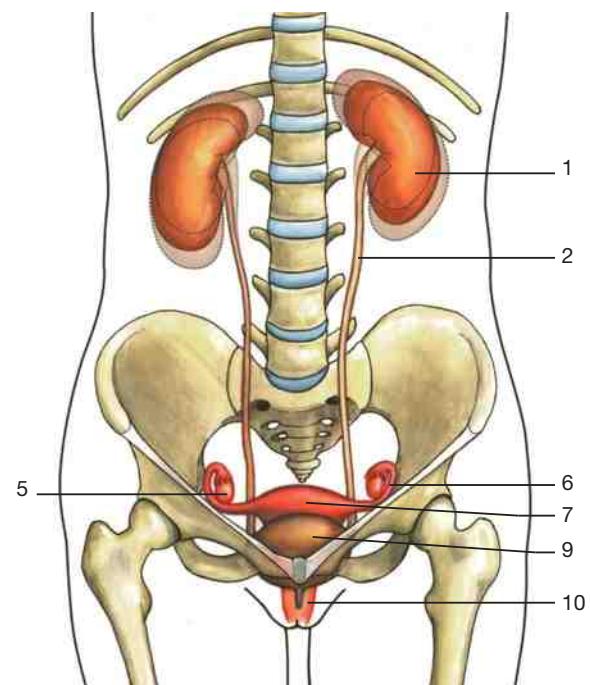

Retroperitoneal organs of the female (anterior aspect). View of the female pelvis showing uterus with uterine ligaments, ovary, and urinary bladder (from Lütjen-Drecoll, Rohen, Innenansichten des menschlichen Körpers, 2010).

- 1 Kidney
- 2 Ureter
- 3 Inferior vena cava
- 4 Abdominal aorta
- 5 Ovary
- 6 Uterine tube
- 7 Uterus
- 8 Round ligament and inguinal canal
- 9 Urinary bladder
- 10 Vagina

The organs of the urinary system (kidney, ureter, and, in the female, genital organs) are located together with vessels and nerves (aorta, inferior vena cava, plexus solaris, etc.) within the retroperitoneal space.

The upper part of the kidneys reaches the level of the margin of the lung. During respiration, the kidneys move slightly within their fasciae of Gerota. Parallel with the vertebral column, the ureter runs towards the urinary bladder. The great center of the autonomic nervous system, the solar plexus (celiac ganglion, etc.), is located in front of the abdominal aorta.

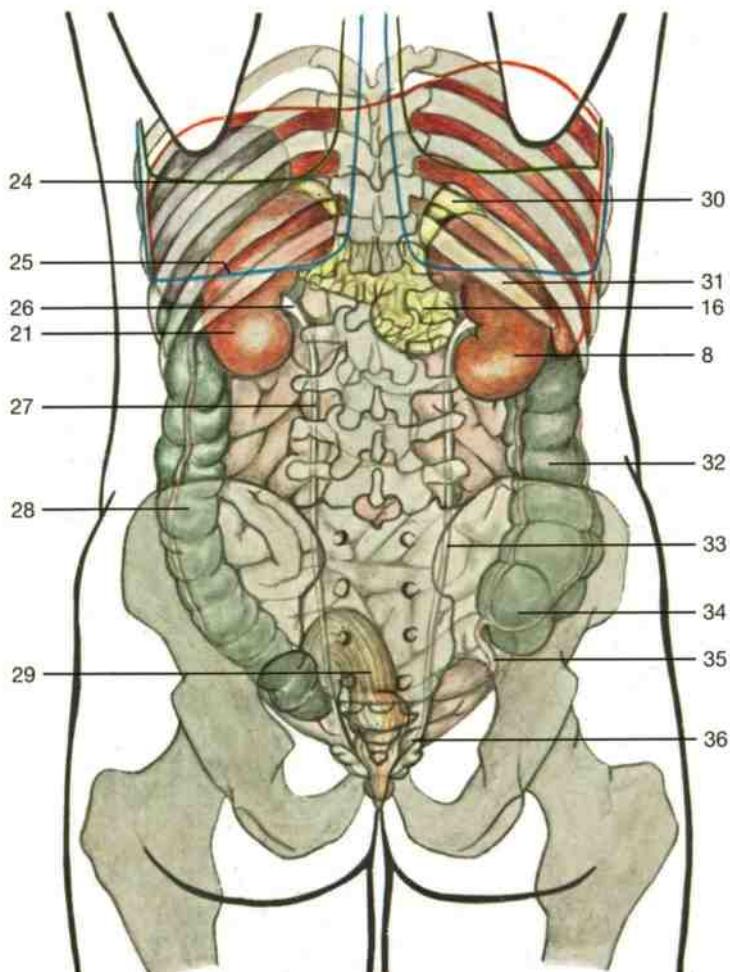

The genital organs of the female (uterus, uterine tube, ovary) are located within the pelvic cavity. In the male, the testis has moved out of the abdominal cavity and penetrated the inguinal canal to be finally located within the extragenital organs.

Position of kidneys, urinary and genital organs in the female (anterior aspect, schematic drawing). The excursions of the kidneys with the respiratory movements of the diaphragm are indicated.

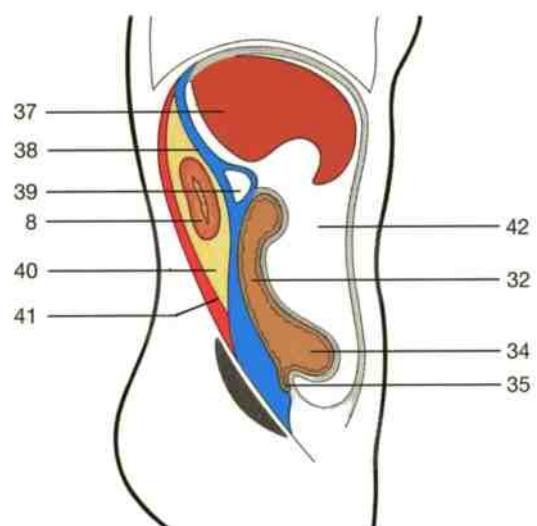

Horizontal section through the abdominal cavity at the level of the first lumbar vertebra (from below).

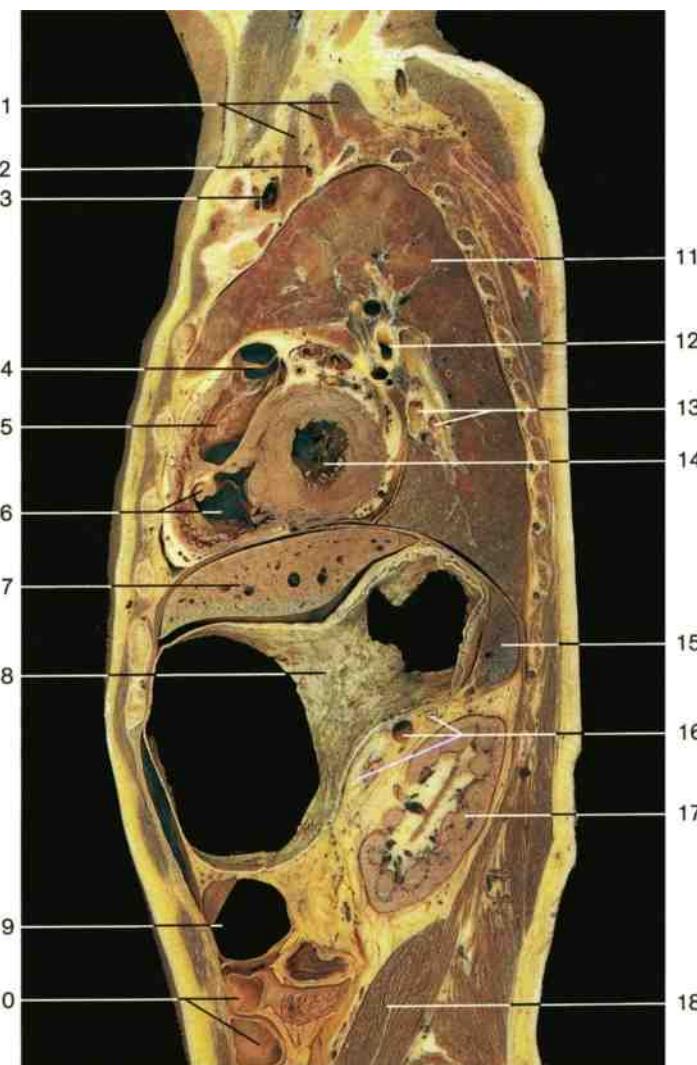

Positions of urinary organs (posterior aspect, schematic drawing).
Notice that the upper part of the kidney reaches the level of the margin of pleura and lung.

- 15 Fibrous capsule of kidney

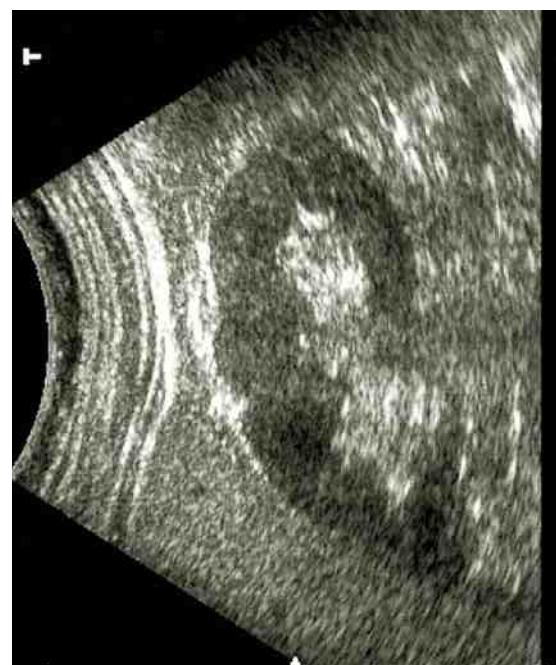

Each kidney can be divided into five segments supplied by individual interlobar arteries known as end arteries. Thus, obstruction leads to infarcts marking the trace of segment borders. The anterior kidney surface reveals four segments; the posterior, only three (Nos. 1, 4, and 5).

Cast of renal pelvis and calices.
1–4 = Renal segments on anterior surface.

Left kidney and suprarenal gland in situ. The anterior cortical layer of the kidney has been removed to display the renal pelvis and papillae.

Abdominal aorta (subtraction angiography).

Left kidney (arteriography).

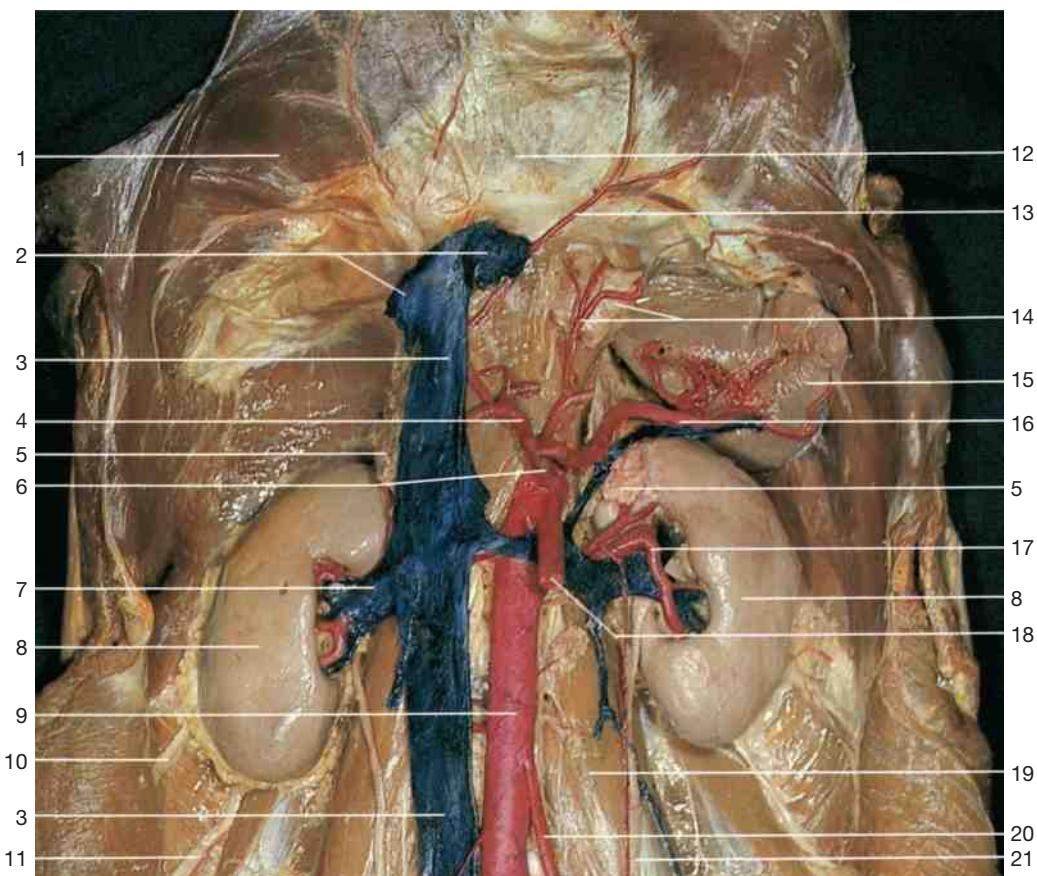

Arteries of kidney and suprarenal gland (schematic drawing).

The kidneys are perfused by app. 1.500–1.800 l of blood per day via the renal arteries. Out of more than 1.2 million renal corpuscles (glomeruli), 1% of this volume (id 150–180 l) is filtered as a cell free fluid. In the tubular system, 99% of this fluid, together with useful substances like glucose and

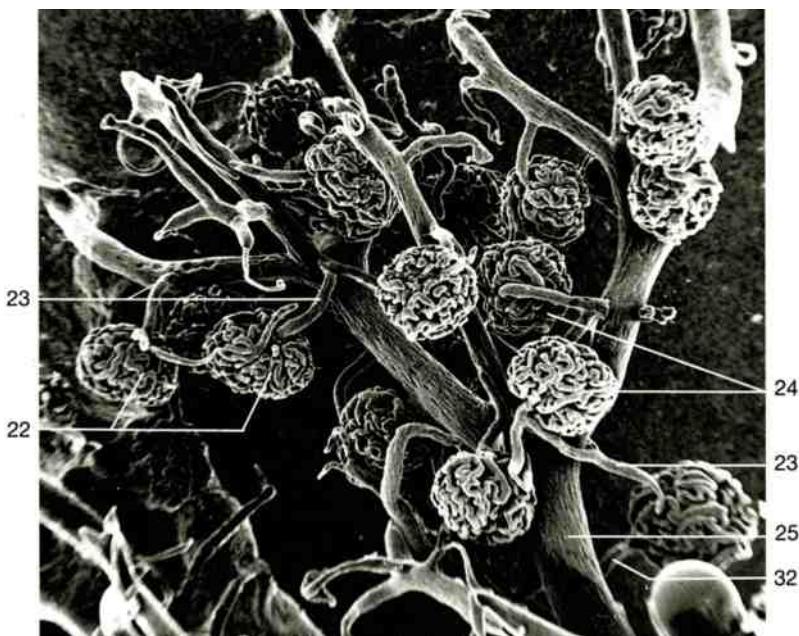

ions, are reabsorbed. Only 1–1.5 l of urine containing waste material is excreted. Diseases of the renal vascular system may impair the filtering process and thereby the composition of the blood.

- 30 Umbilicus
- 31 Trigone of bladder and ureteric orifice
- 32 Navicular fossa of urethra
- 33 External urethral orifice
- 34 Testis

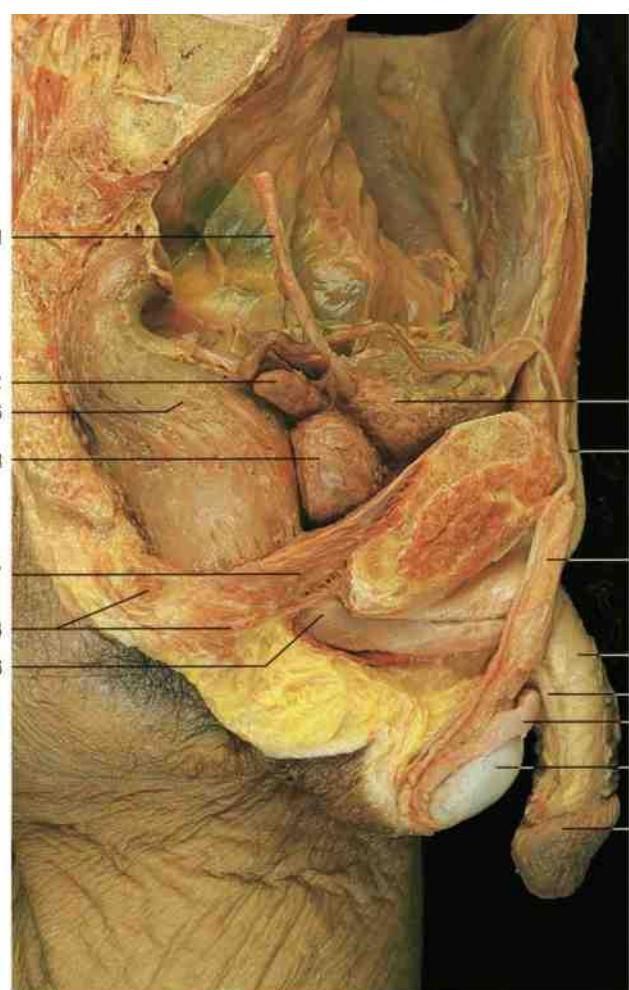

Male urogenital system (schematic drawing).

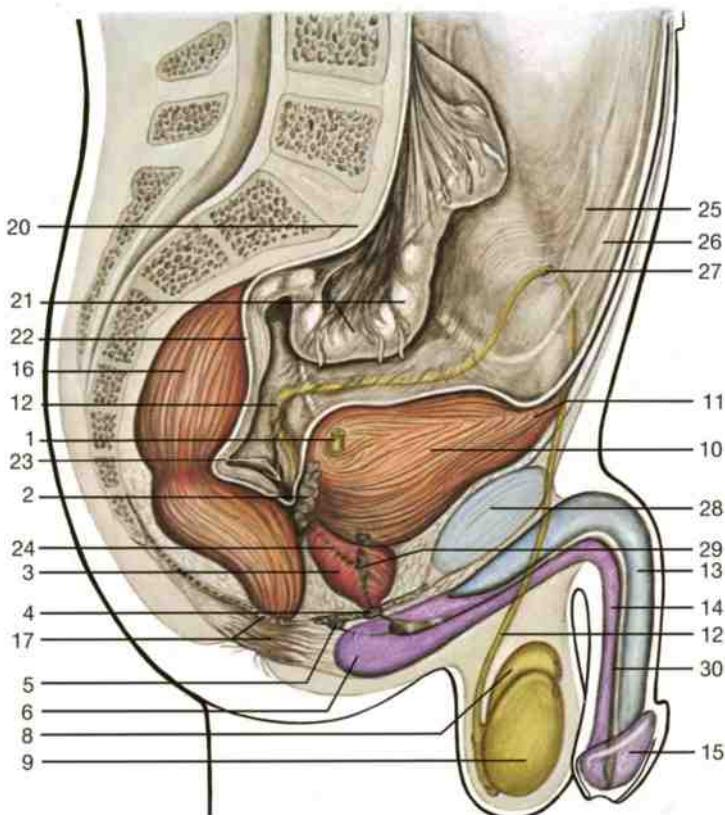

The **prostate** is located between the bladder and urogenital diaphragm. The penis includes the **urethra** and thus serves for both ejaculation and micturition. The internal (involuntary) and external (voluntary) urethral sphincters are widely separated. The **ureter**, having crossed the ductus deferens, enters the urinary bladder at its base. The peritoneum is reflected off of the posterior surface of the bladder and onto the rectum, thus forming the rectovesical pouch.

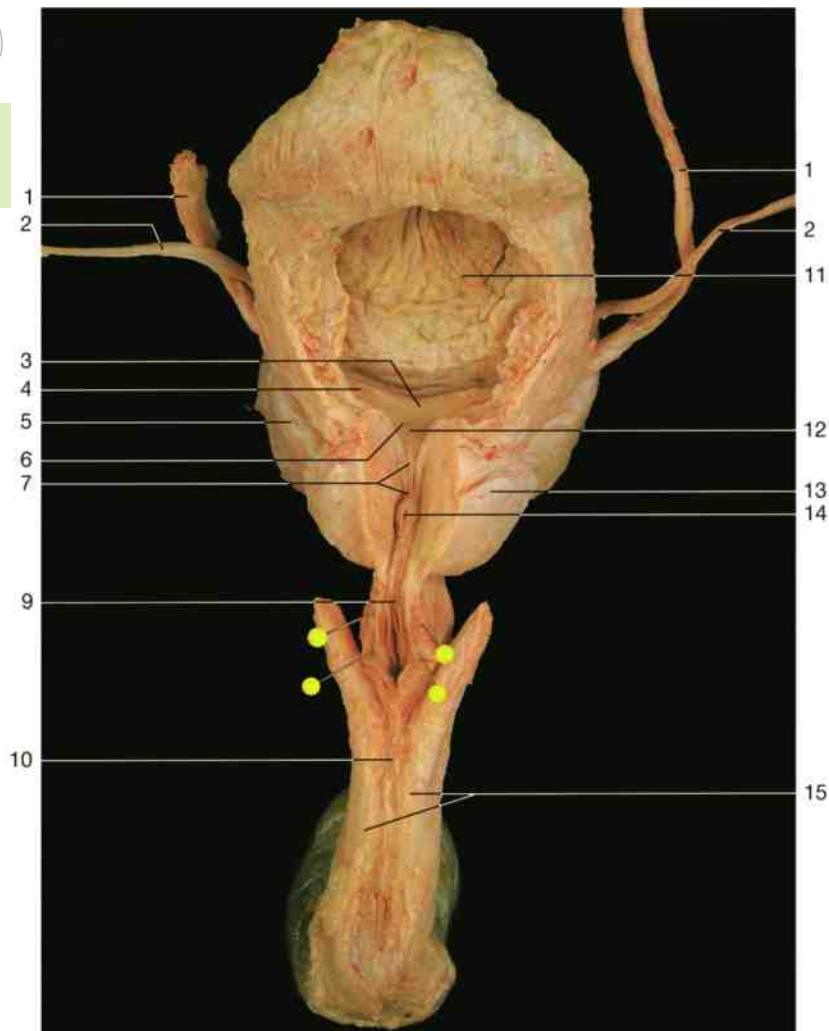

Male genital organs, isolated (right lateral aspect).

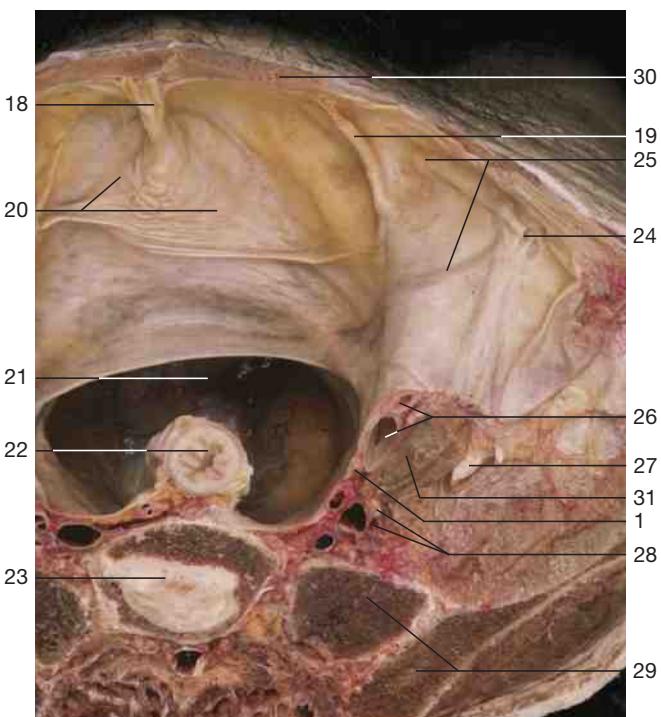

Male genital organs in situ (right lateral aspect).

Positions of male genital organs (right lateral aspect).
(Schematic drawing.)

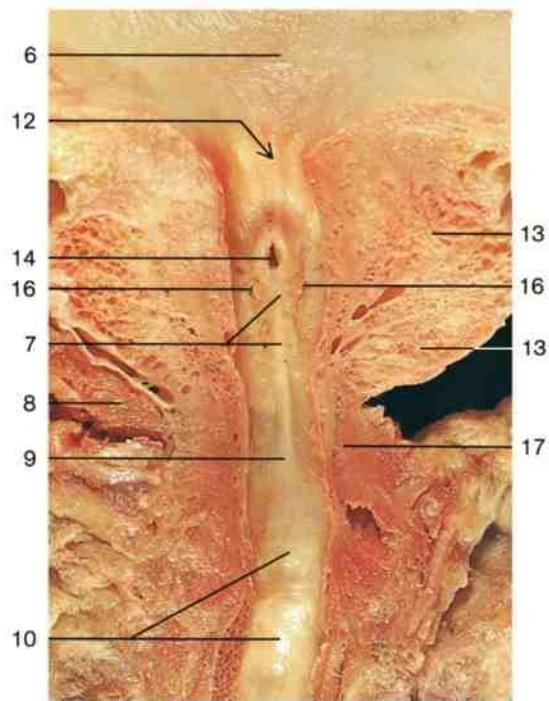

- 1 Ureter
- 2 Ductus deferens
- 3 Interureteric fold
- 4 Ureteric orifice
- 5 Seminal vesicle
- 6 Trigone of bladder
- 7 Prostatic urethra with seminal colliculus and urethral crest
- 8 Deep transverse perineal muscle
- 9 Membranous urethra
- 10 Spongy urethra
- 11 Mucous membrane of urinary bladder
- 12 Internal urethral orifice and uvula of bladder
- 13 Prostate
- 14 Prostatic utricle
- 15 Right and left corpus cavernosum of penis
- 16 Ejaculatory duct
- 17 Sphincter urethrae muscle
- 18 Median umbilical fold with remnant of urachus
- 19 Medial umbilical fold with remnant of umbilical artery
- 20 Urinary bladder
- 21 Rectovesical pouch
- 22 Rectum
- 23 Sacrum
- 24 Deep iliac circumflex artery
- 25 Deep inguinal ring and ductus deferens
- 26 External iliac artery and vein

- 15 Fundus of bladder
- 16 Head of epididymis
- 17 Testis
- 18 Mucous membrane of bladder
- 19 Trigone of bladder
- 20 Ureteric orifice
- 21 Internal urethral orifice
- 22 Seminal colliculus
- 23 Prostate
- 24 Prostatic urethra
- 25 Membranous urethra
- 26 Spongy (penile) urethra
- 27 Skin of penis
- 28 Deep dorsal vein of penis (unpaired)
- 29 Dorsal artery of penis (paired)
- 30 Tunica albuginea of corpora cavernosa
- 31 Septum of penis
- 32 Deep artery of penis
- 33 Tunica albuginea of corpus spongiosum
- 34 Deep fascia of penis

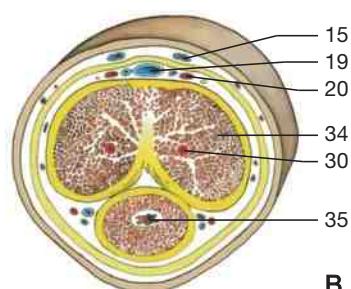

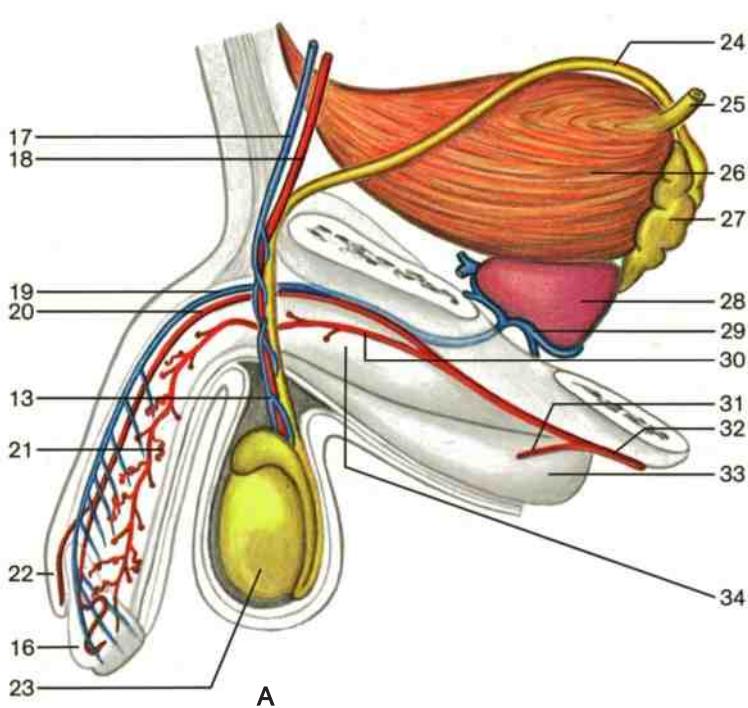

Urinary bladder, urethra, and penis (anterior aspect, opened longitudinally).

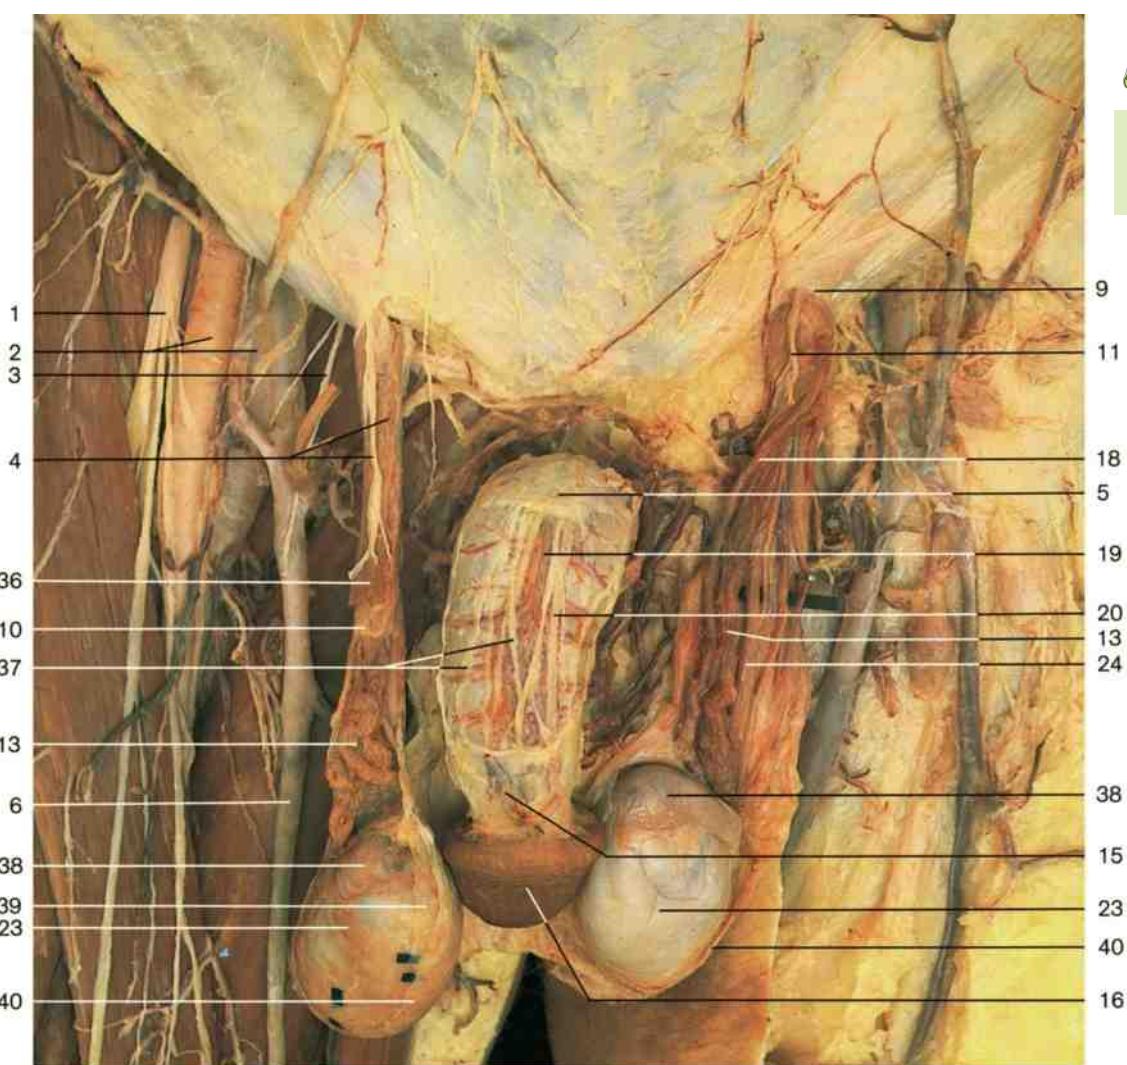

Cross section of penis (inferior aspect).

Male external genital organs with penis, testis, and spermatic cord, superficial layers (anterior aspect).

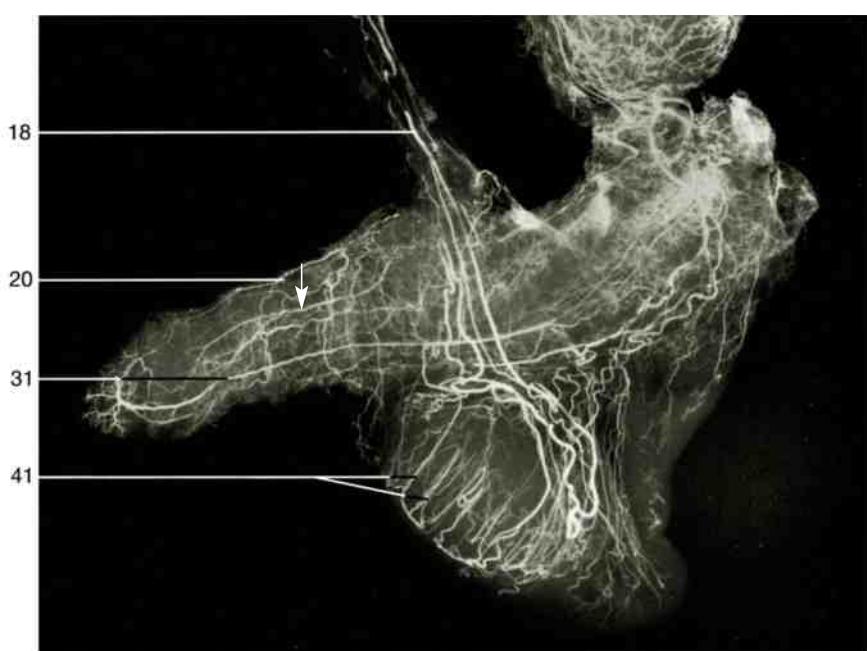

- A**
- Vessels of male genital organs (schematic drawing).
- A = lateral aspect; B = cross section of penis.
- 1 Femoral nerve
 - 2 Femoral artery and vein
 - 3 Femoral branch of genitofemoral nerve
 - 4 Spermatic cord with genital branch of genitofemoral nerve
 - 5 Penis with deep fascia
 - 6 Great saphenous vein
 - 7 Cremaster muscle
 - 8 Testis with cremaster muscle
 - 9 Superficial inguinal ring
 - 10 Internal spermatic fascia (cut edge)
 - 11 Ilio-inguinal nerve
 - 12 Left spermatic cord
 - 13 Pampiniform venous plexus
 - 14 External spermatic fascia
 - 15 Superficial dorsal vein of penis

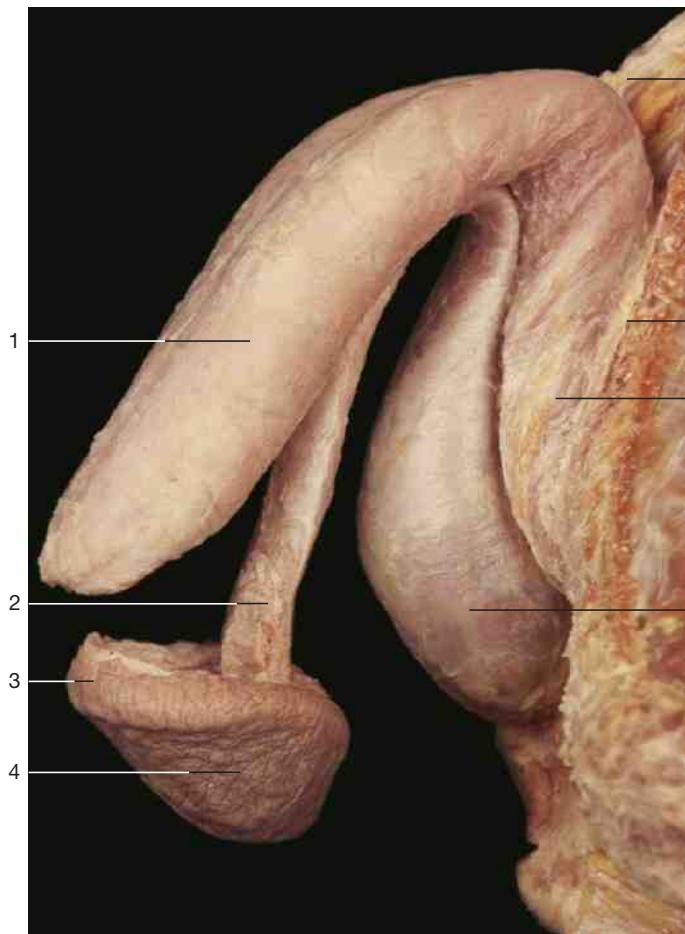

Male external genital organs with penis, testis, and spermatic cord, deeper layers (anterior aspect).
The deep fascia of the penis has been opened to display the dorsal nerves and vessels.

- 16 Glans penis
- 17 Testicular vein
- 18 Testicular artery
- 19 Deep dorsal vein of penis
- 20 Dorsal artery of penis
- 21 Helicine arteries
- 22 Prepuce
- 23 Testis with tunica albuginea
- 24 Ductus deferens
- 25 Ureter
- 26 Urinary bladder
- 27 Seminal vesicle
- 28 Prostate
- 29 Vesicoprostatic venous plexus
- 30 Deep artery of penis
- 31 Artery of bulb of penis
- 32 Internal pudendal artery

- 34 Corpus cavernosum of penis
- 35 Urethra
- 36 Cremasteric fascia with cremaster muscle
- 37 Dorsal nerve of penis
- 38 Epididymis
- 39 Tunica vaginalis (visceral layer)
- 40 Tunica vaginalis (parietal layer)
- 41 Testis with vascular loops

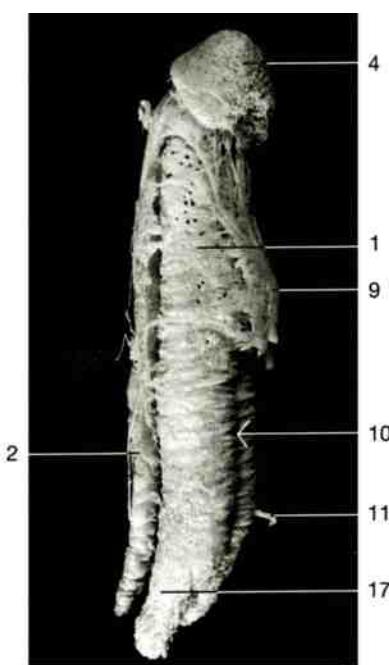

Male genital organs (arteriography, lateral aspect). Arrow = helicine artery.

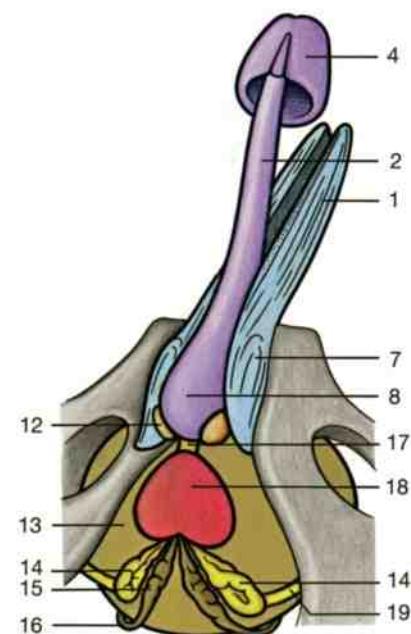

Male external genital organs (lateral aspect). The corpus spongiosum of the penis with the glans penis has been isolated and reflected.

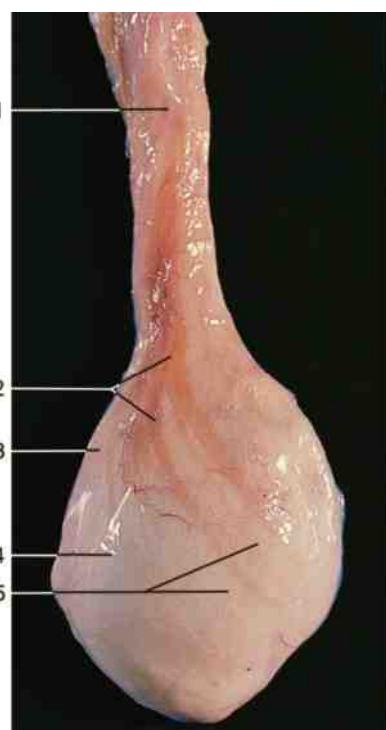

Sagittal section of the pelvic cavity with the male genital organs (MRI scan; from Heuck et al., MRT-Atlas, 2009).

Resin cast of erected penis.

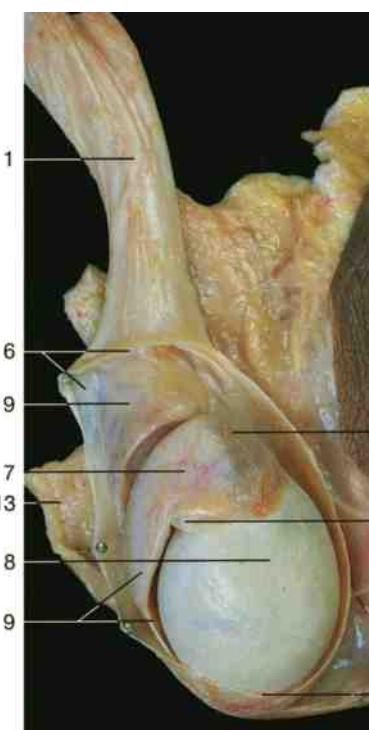

Male external genital organs and accessory glands (schematic drawing).

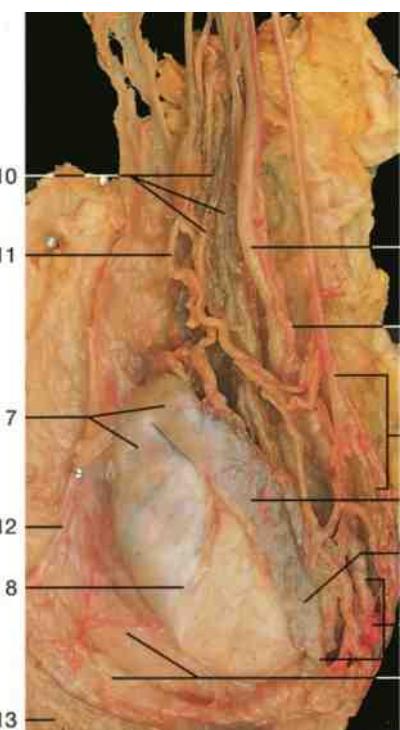

Testis and epididymis with investing layers (lateral aspect).

- 1 Spermatic cord covered with cremasteric fascia
- 2 Cremaster muscle
- 3 Position of epididymis
- 4 Internal spermatic fascia
- 5 Position of testis
- 6 Internal spermatic fascia with adjacent investing layers of testis (cut surface)
- 7 Head of epididymis

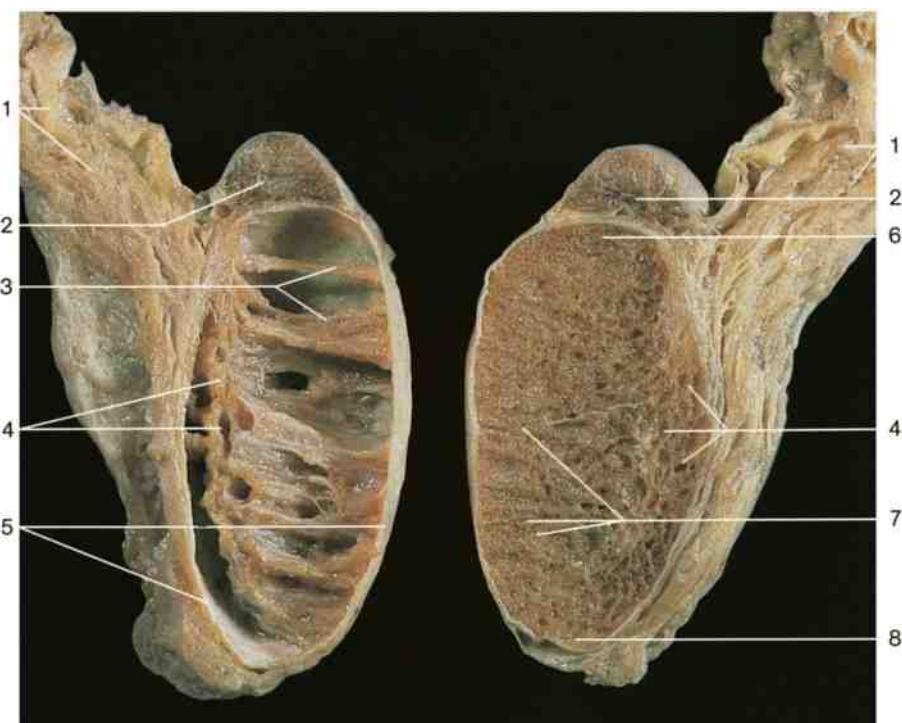

Testis and epididymis (lateral aspect). The tunica vaginalis has been opened.

- 8 Testis with tunica vaginalis (visceral layer)
- 9 Body of epididymis
- 10 Pampiniform venous plexus (anterior veins)
- 11 Testicular artery
- 12 Tunica vaginalis (parietal layer, cut edge)
- 13 Skin and dartos muscle (reflected)
- 14 Ductus deferens
- 19 Appendix of testis
- 20 Appendix of epididymis
- 21 Gubernaculum testis
- 22 Head of epididymis

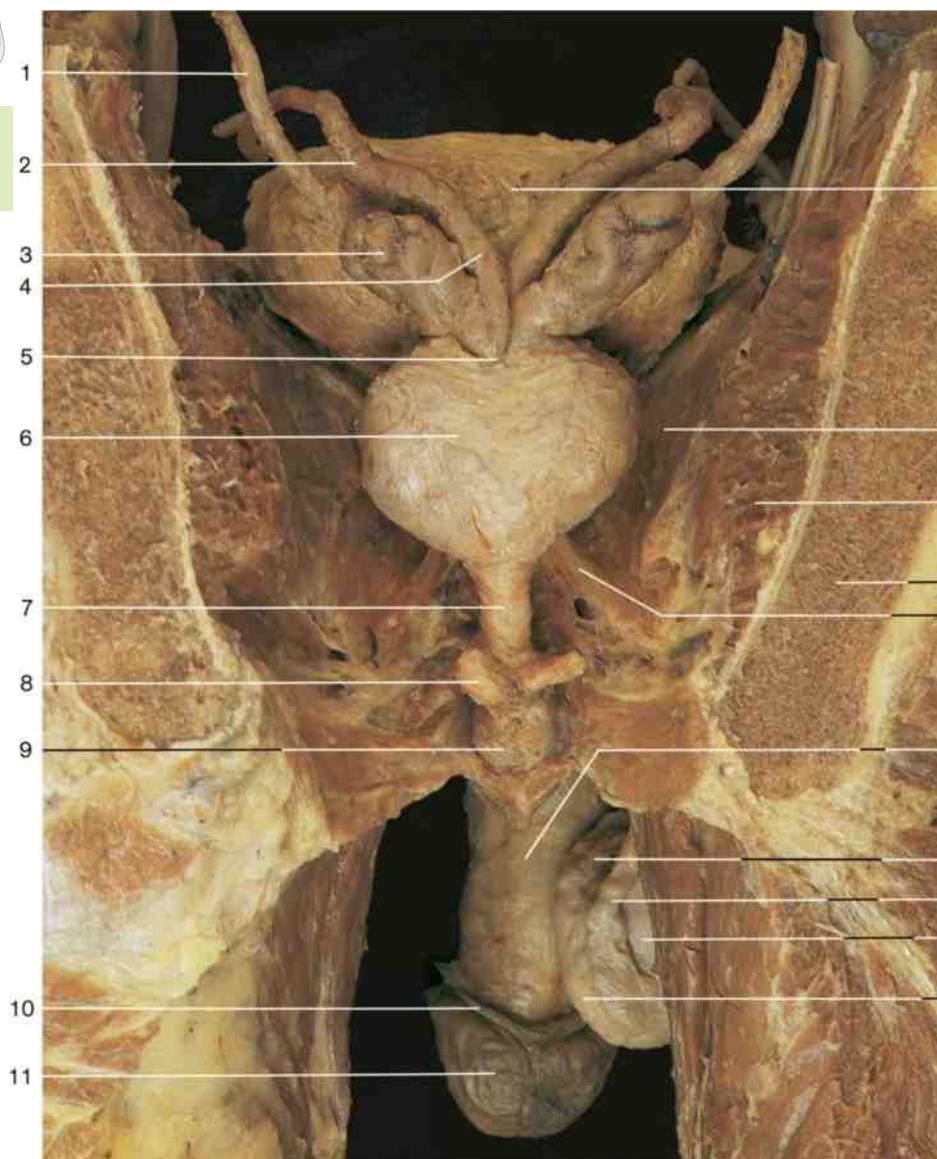

Testis, epididymis, and spermatic cord (left side, posterolateral aspect). Dissection of spermatic cord and ductus deferens.

- 15 Artery of ductus deferens
- 16 Posterior veins of pampiniform plexus
- 17 Tail of epididymis
- 18 Transition of epididymal duct to ductus deferens and venous plexus
- 19 Parietal layer of tunica vaginalis
- 20 Appendix of epididymis
- 21 Appendix of testis
- 22 Gubernaculum testis

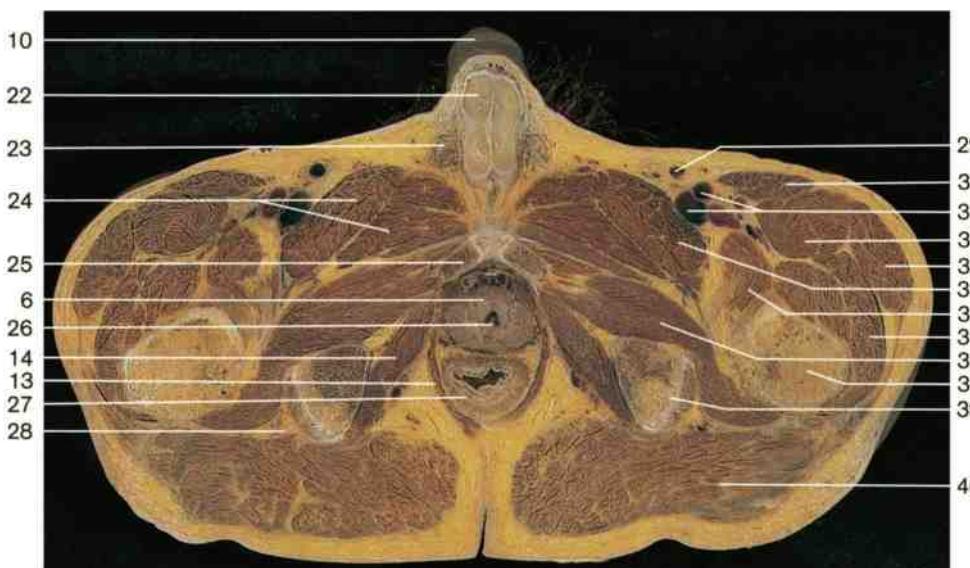

Longitudinal section through testis and epididymis. The left figure shows the testicular septa after removal of the seminiferous tubules.

- 1 Spermatic cord (cut surface)
- 2 Head of epididymis (cut surface)
- 3 Septa of testis
- 4 Mediastinum testis
- 5 Tunica albuginea
- 6 Superior pole of testis
- 7 Convoluted seminiferous tubules
- 8 Inferior pole of testis

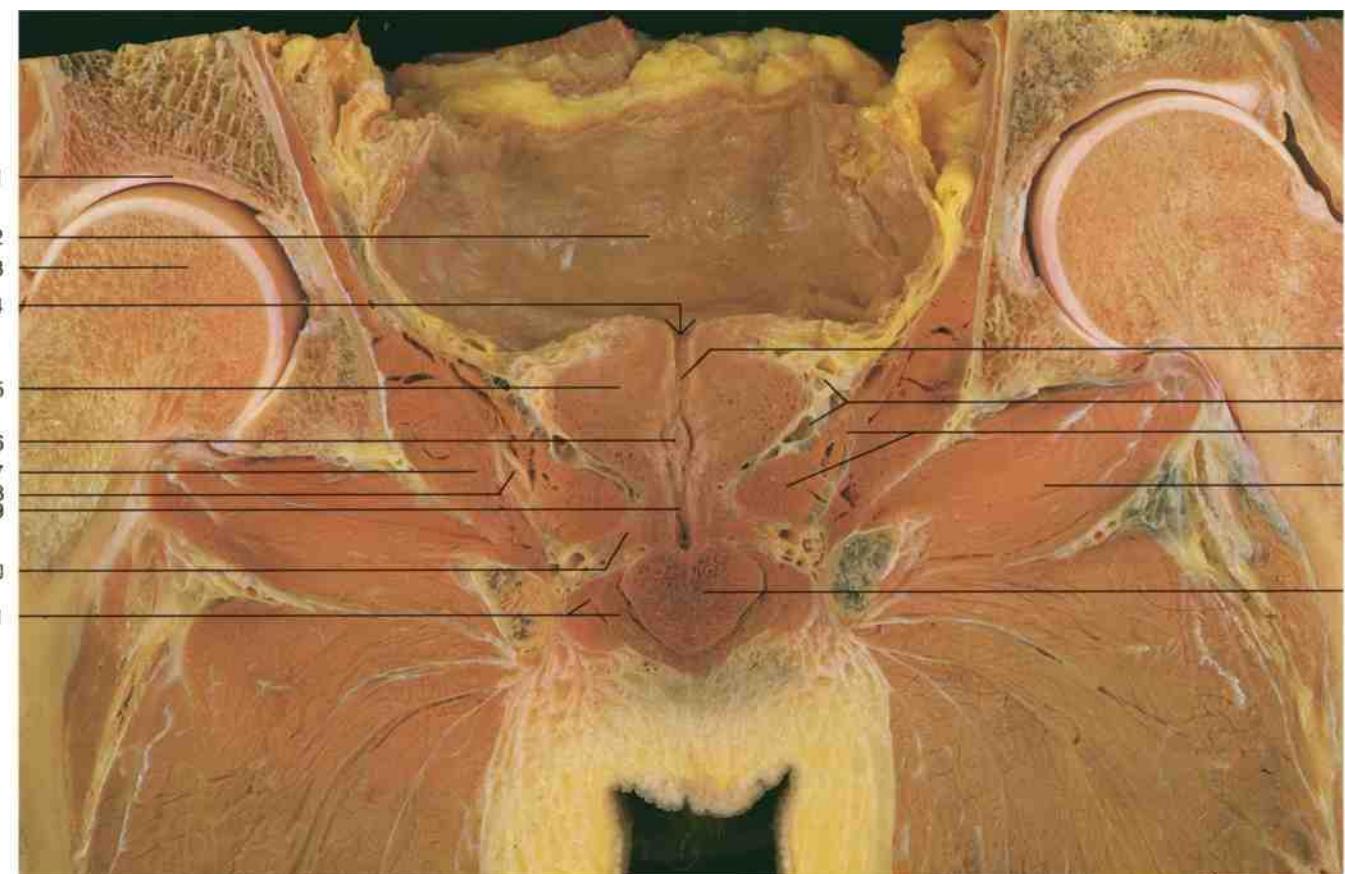

Accessory glands of male genital organs in situ. Coronal section through the pelvic cavity. Posterior aspect of urinary bladder, prostate, and seminal vesicles.

- 1 Ureter
- 2 Ductus deferens
- 3 Seminal vesicle
- 4 Ampulla of ductus deferens
- 5 Ejaculatory duct (proximal portion)
- 6 Prostate
- 7 Membranous urethra
- 8 Bulbo-urethral or Cowper's gland

- 23 Spermatic cord
- 24 Pectenous and adductor muscles
- 25 Pubic bone
- 26 Prostatic part of urethra (seminal colliculus)
- 27 Rectum
- 28 Sciatic nerve
- 29 Great saphenous vein
- 30 Sartorius muscle
- 31 Femoral artery and vein
- 32 Rectus femoris muscle
- 33 Tensor fasciae latae muscle
- 34 Pectenous muscle
- 35 Iliopsoas muscle
- 36 Vastus lateralis muscle
- 37 Obturator externus muscle
- 38 Femur
- 39 Ischial tuberosity
- 40 Gluteus maximus muscle

Horizontal section through pelvic cavity at the level of prostate.

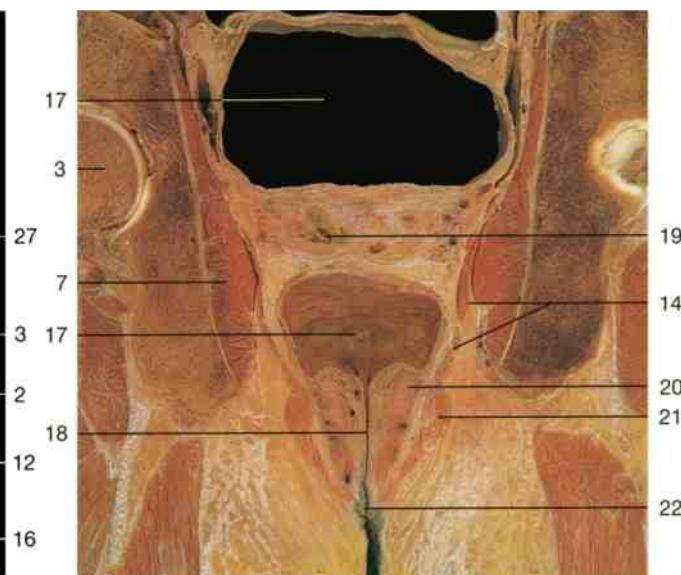

Coronal section through pelvic cavity at the level of prostate and hip joint (anterior aspect).

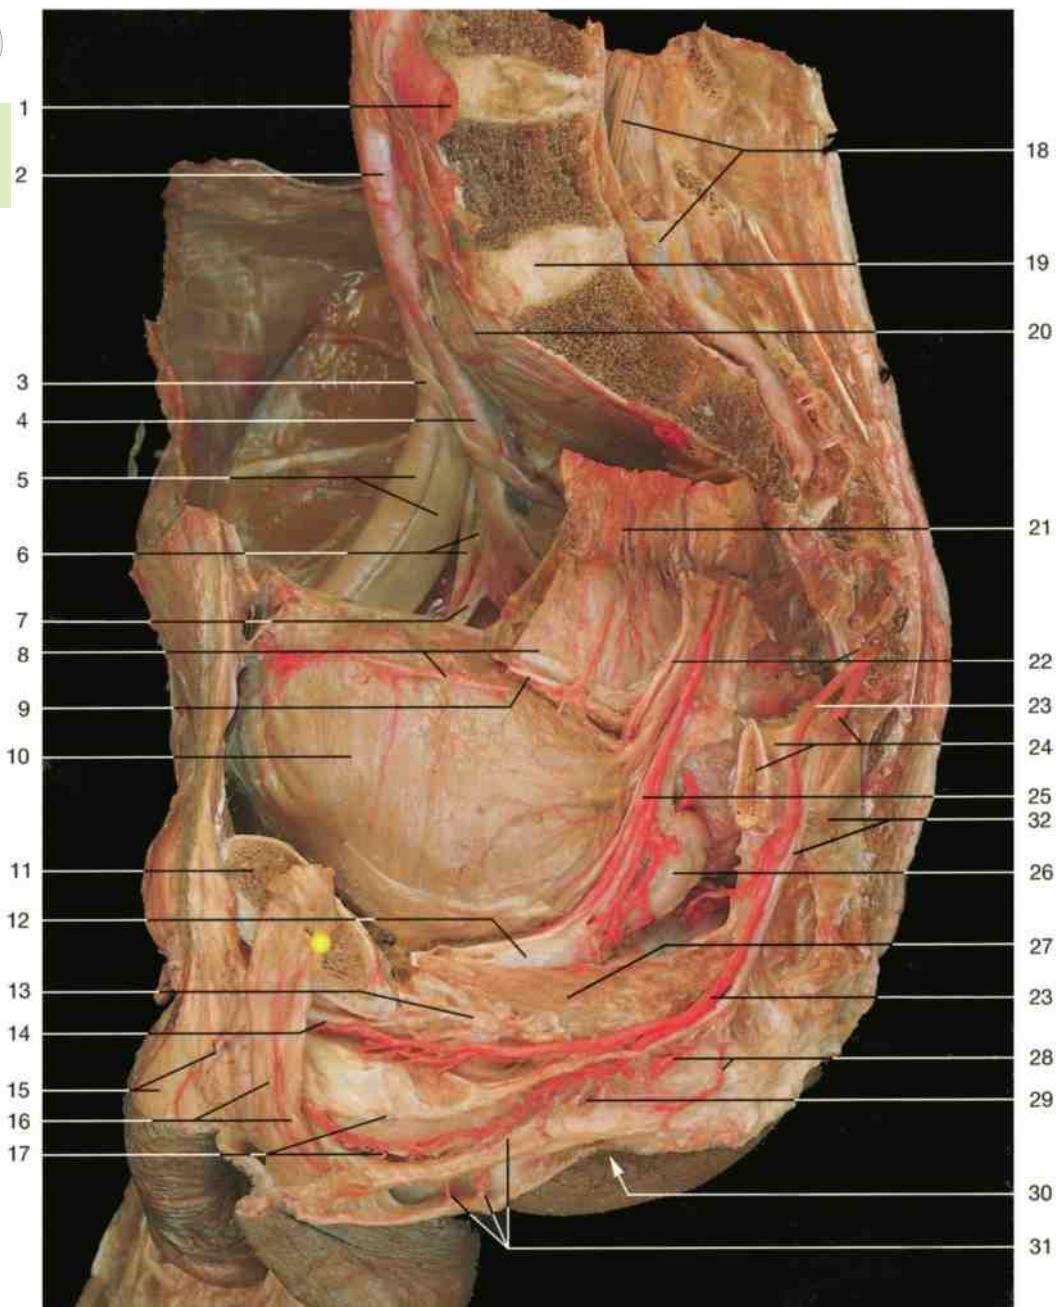

- | | | |
|-----------------------------|---|--------------------------------------|
| 1 Acetabulum of hip joint | 10 Deep transverse perineus muscle | 19 Seminal vesicle |
| 2 Urinary bladder | 11 Crus penis and ischiocavernosus muscle | 20 Internal anal sphincter muscle |
| 3 Head of femur | 12 Prostatic part of urethra | 21 External anal sphincter muscle |
| 4 Internal urethral orifice | 13 Prostatic plexus | 22 Anus |
| 5 Prostate | 14 Levator ani muscle | 23 Psoas major muscle |
| 6 Seminal colliculus | 15 Obturator externus muscle | 24 Intervertebral disc |
| 7 Obturator internus muscle | 16 Bulb of penis | 25 Ilium |
| 8 Ischiorectal fossa | 17 Ampulla of rectum | 26 Ligament of the head of the femur |
| 9 Membranous urethra | 18 Anal canal | 27 Sacral promontory |

Coronal section through pelvic cavity (MRI scan).

Coronal section through anal canal.

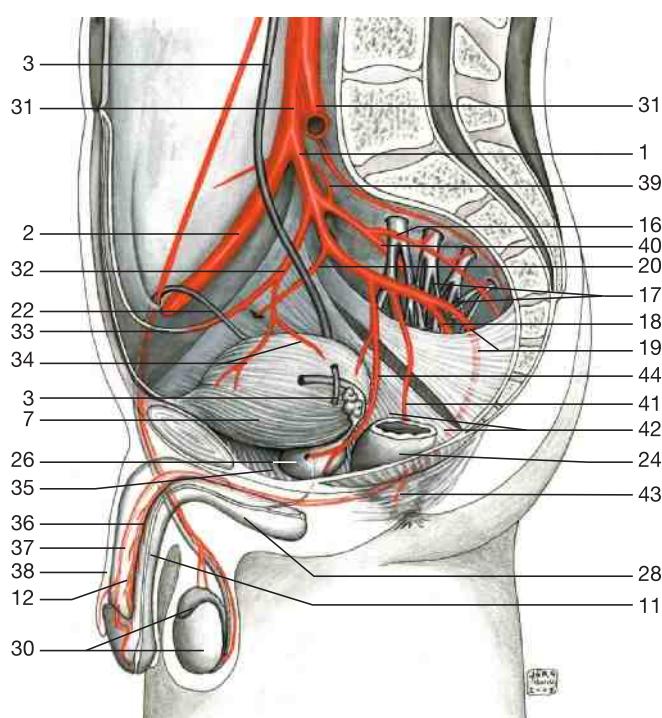

Pelvic cavity in the male (right half of parasagittal section). The arteries have been injected with red resin. The parietal layer of peritoneum has been removed. The urinary bladder is filled to a great extent.

- | | |
|---|--|
| 1 Left common iliac artery | 18 Cauda equina and dura mater (divided) |
| 2 Right common iliac artery | 19 Intervertebral disc between fifth lumbar vertebra and sacrum |
| 3 Right ureter | 20 Sacral promontory |
| 4 Right internal iliac artery | 21 Mesosigmoid |
| 5 Right external iliac artery and vein | 22 Left ureter |
| 6 Right obturator artery and nerve | 23 Left internal pudendal artery |

Muscles of urogenital and pelvic diaphragms in the male (from below).

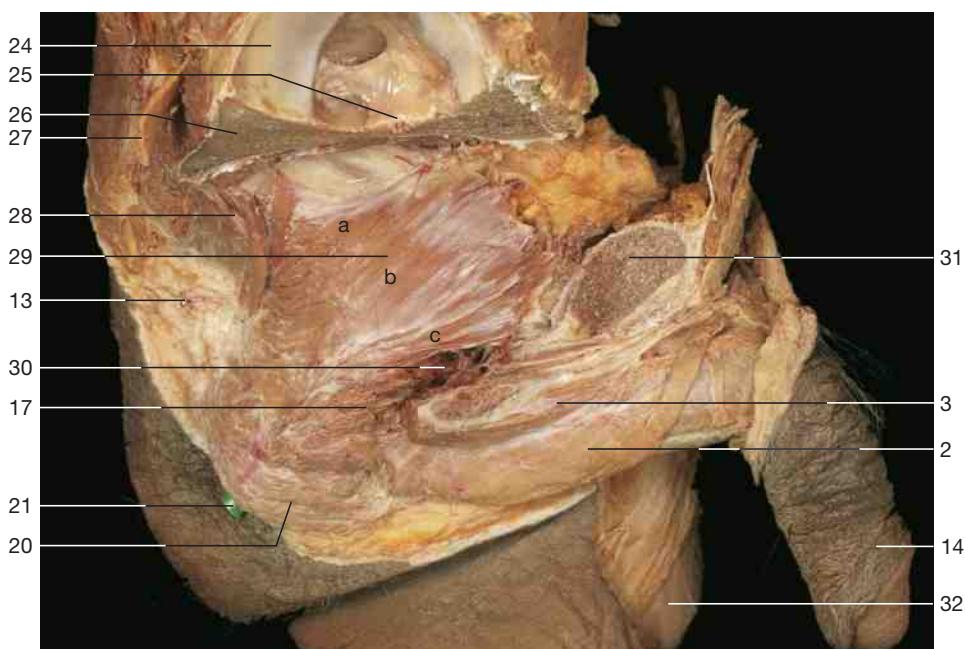

Muscles of urogenital and pelvic diaphragms in the male (from below). The penis has been divided (schematic drawing).

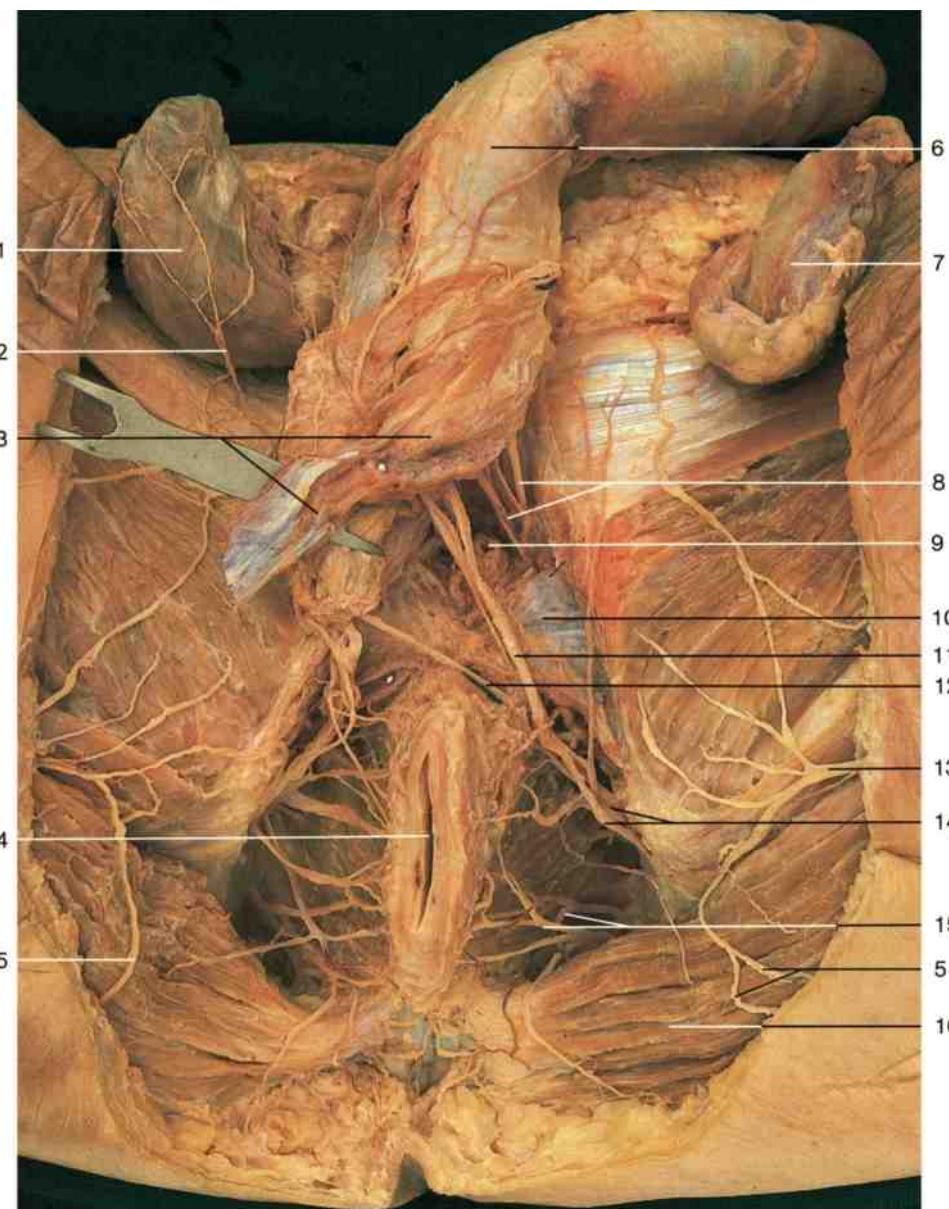

- 1 Right testis (reflected laterally and upward)
- 2 Bulbospongiosus muscle
- 3 Ischiocavernosus muscle
- 4 Adductor magnus muscle
- 5 Posterior scrotal nerves and superficial perineal arteries
- 6 Posterior scrotal artery and vein
- 7 Right artery of bulb of penis
- 8 Perineal body
- 9 Perineal branches of pudendal nerve
- 10 Pudendal nerve and internal pudendal artery
- 11 Inferior rectal arteries and nerves
- 12 Inferior cluneal nerve
- 13 Coccyx (location)
- 14 Penis
- 15 Left testis (reflected laterally)
- 16 Left posterior scrotal artery
- 17 Deep transverse perineal muscle
- 18 Left artery of bulb of penis
- 19 Posterior femoral cutaneous nerve
- 20 External anal sphincter muscle
- 21 Anus
- 22 Gluteus maximus muscle
- 23 Anococcygeal nerves
- 24 Acetabulum (femur removed)
- 25 Ligament of femoral head
- 26 Body of ischium (cut)
- 27 Sciatic nerve
- 28 Coccygeus muscle
- 29 Levator ani muscle
 - a iliococcygeus muscle
 - b pubococcygeus muscle
 - c puborectalis muscle
- 30 Prostatic venous plexus
- 31 Body of pubis
- 32 Testis

Urogenital diaphragm and external genital organs in the male with vessels and nerves (from below). The testes have been reflected laterally.

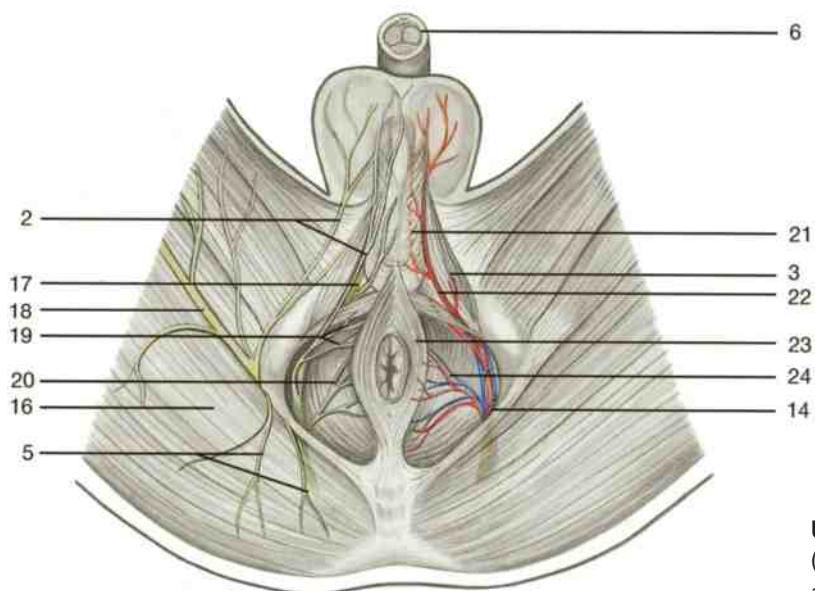

Pelvic diaphragm and external genital organs in the male. The right half of the pelvis including the obturator internus muscle and femur have been removed to display the right half of the levator ani muscle.

- 1 Right testis (reflected)
- 2 Posterior scrotal nerves
- 3 Left crus penis with ischiocavernosus muscle
- 4 Anus
- 5 Inferior cluneal nerves
- 6 Penis
- 7 Left testis (reflected)
- 8 Dorsal artery and nerve of penis
- 9 Urethra
- 10 Deep transverse perineus muscle
- 11 Perineal branch of pudendal nerve
- 12 Artery of bulb of penis (reflected)
- 13 Branch of posterior femoral cutaneous nerve
- 14 Internal pudendal artery and pudendal nerve
- 15 Inferior rectal arteries and nerves
- 16 Gluteus maximus muscle
- 17 Dorsal nerve of penis
- 18 Posterior femoral cutaneous nerve
- 19 Perineal branches of pudendal nerve
- 20 Inferior rectal nerves
- 21 Bulbospongiosus muscle (inside: dorsal artery of penis)
- 22 Perineal artery
- 23 External anal sphincter muscle
- 24 Inferior rectal artery and veins

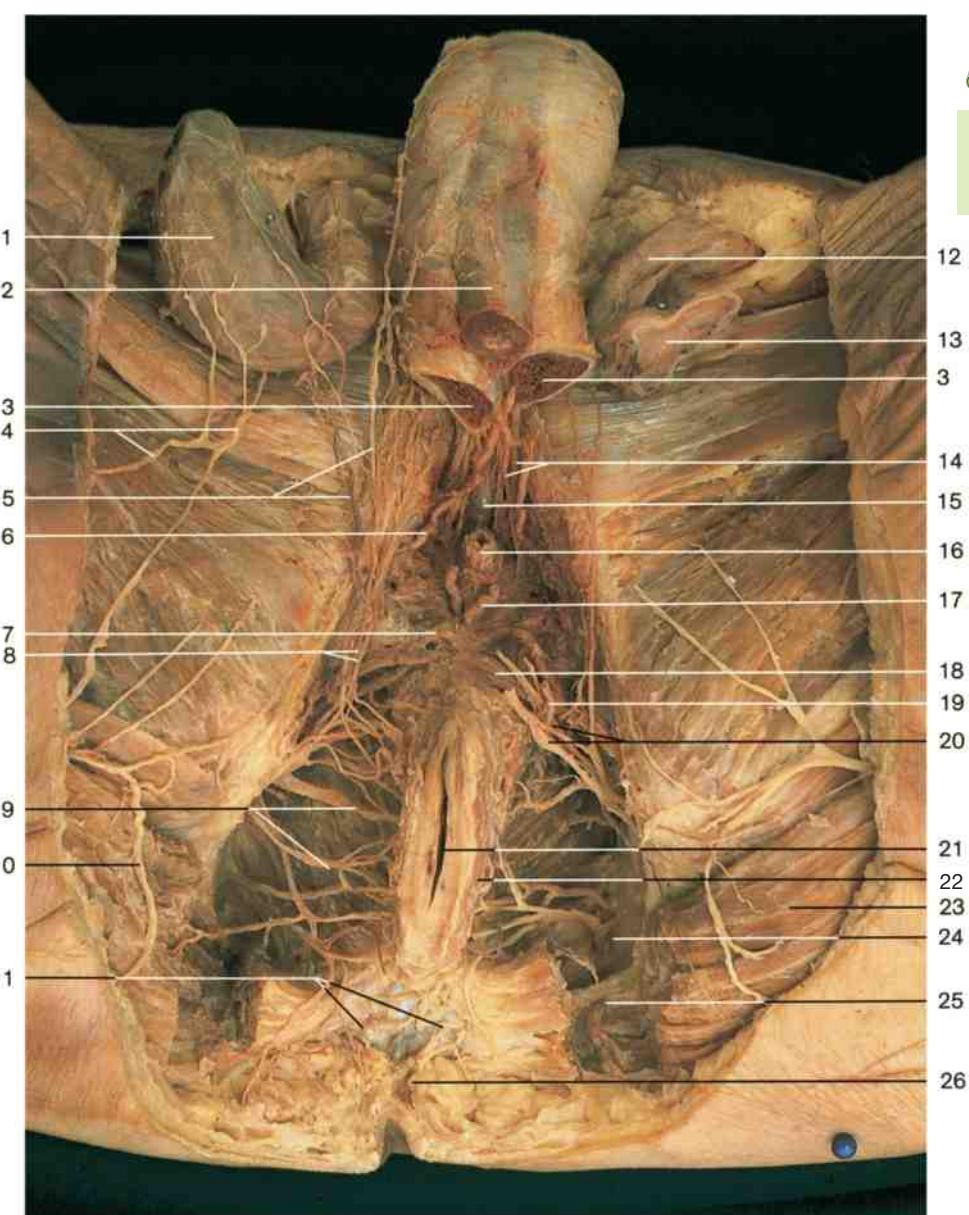

Urogenital diaphragm and external genital organs in the male (from below). The left crus penis has been isolated and reflected laterally together with the bulb of the penis. The urethra has been cut.

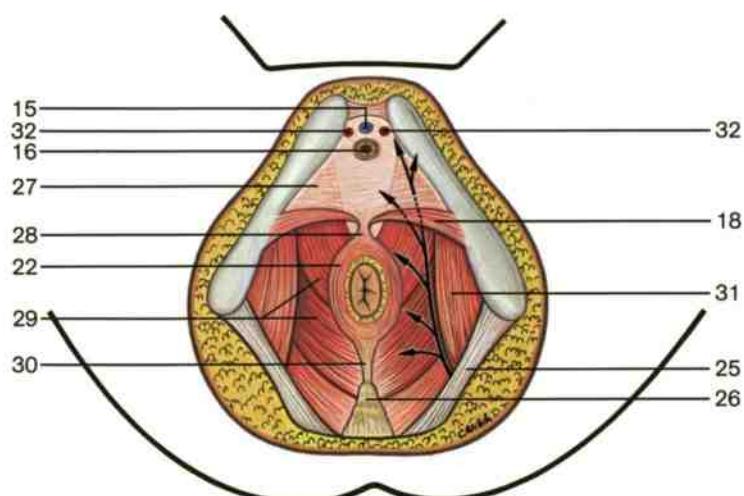

Urogenital and anal region in the male (from below). Right side: nerves; left side: arteries and veins.

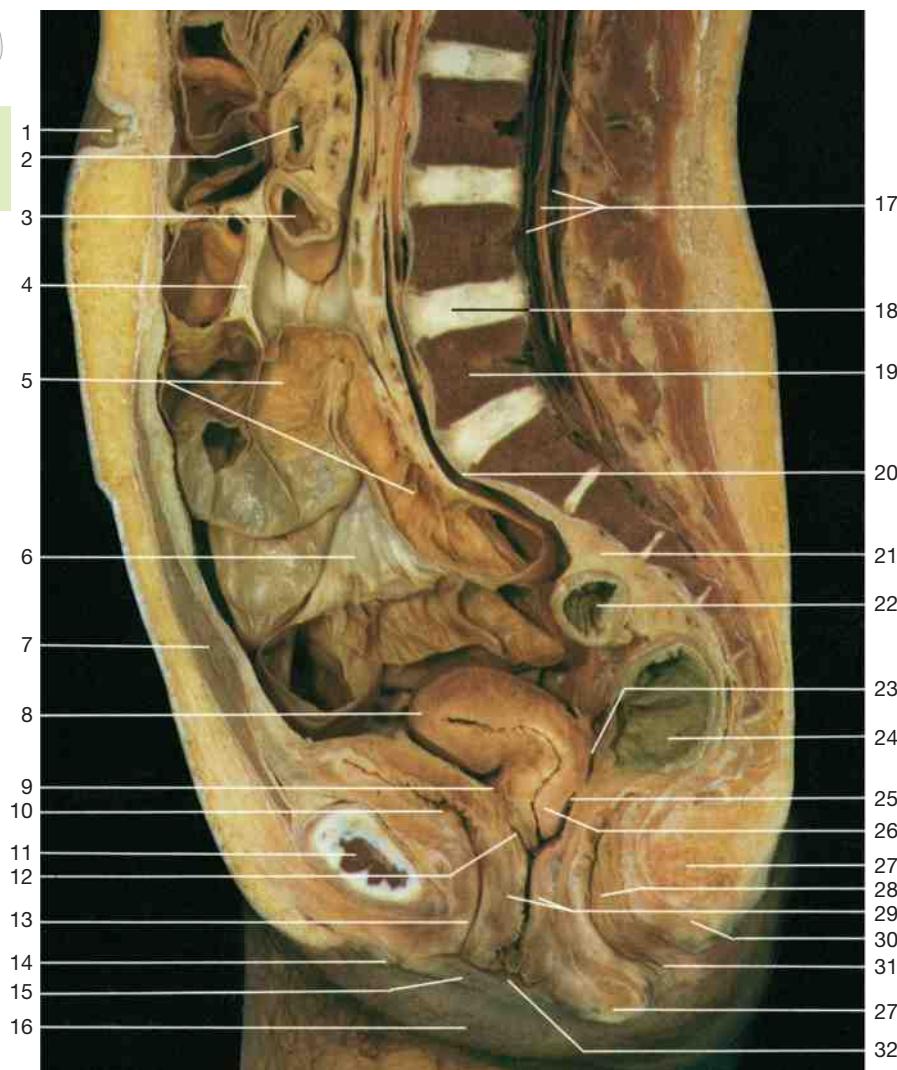

- 1 Right testis (reflected)
- 2 Corpus spongiosum of penis
- 3 Corpus cavernosum of penis
- 4 Perineal branch of posterior femoral cutaneous nerve
- 5 Posterior scrotal arteries and nerves
- 6 Deep artery of penis
- 7 Deep transverse perineal muscle
- 8 Right perineal nerves
- 9 Inferior rectal nerves
- 10 Inferior cluneal nerve
- 11 Anococcygeal nerves
- 12 Left spermatic cord
- 13 Left testis (cut surface)
- 14 Dorsal artery and nerve of penis
- 15 Deep dorsal vein of penis
- 16 Urethra (cut)
- 17 Artery of bulb of penis
- 18 Superficial transverse perineus muscle
- 19 Left artery of bulb of penis
- 20 Perineal branch of pudendal nerve
- 21 Anus
- 22 External anal sphincter muscle
- 23 Gluteus maximus muscle
- 24 Internal pudendal artery and pudendal nerve
- 25 Sacrotuberous ligament
- 26 Coccyx
- 27 Urogenital diaphragm (deep transverse perineus muscle)
- 28 Tendinous center of perineum (perineal body)
- 29 Levator ani muscle
- 30 Anococcygeal ligament
- 31 Obturator internus muscle
- 32 Dorsal artery of penis

Urogenital diaphragm and external genital organs in the male (from below). The root of the penis has been cut. Dissection of the urogenital diaphragm.

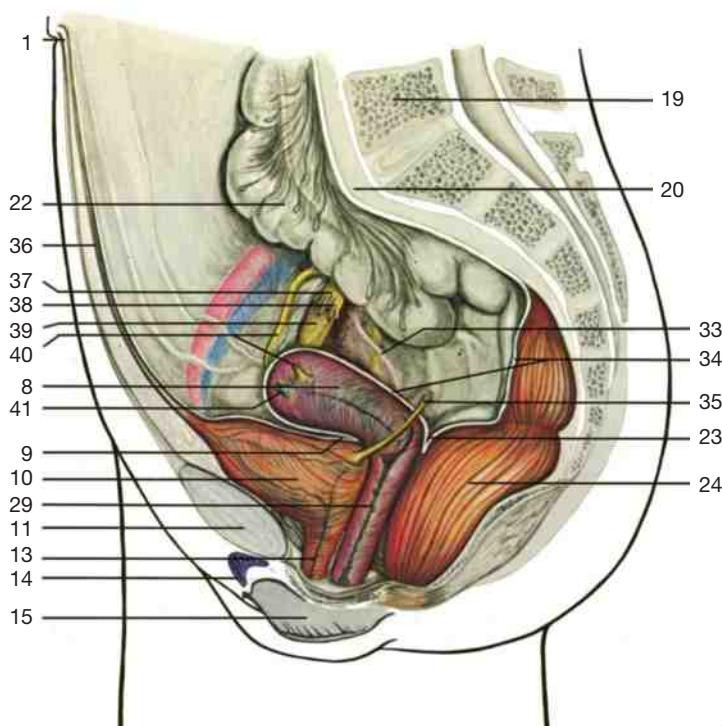

Urogenital and pelvic diaphragms in the male (from below). The penis has been removed. The arrows indicate the course of vessels and nerves (schematic drawing).

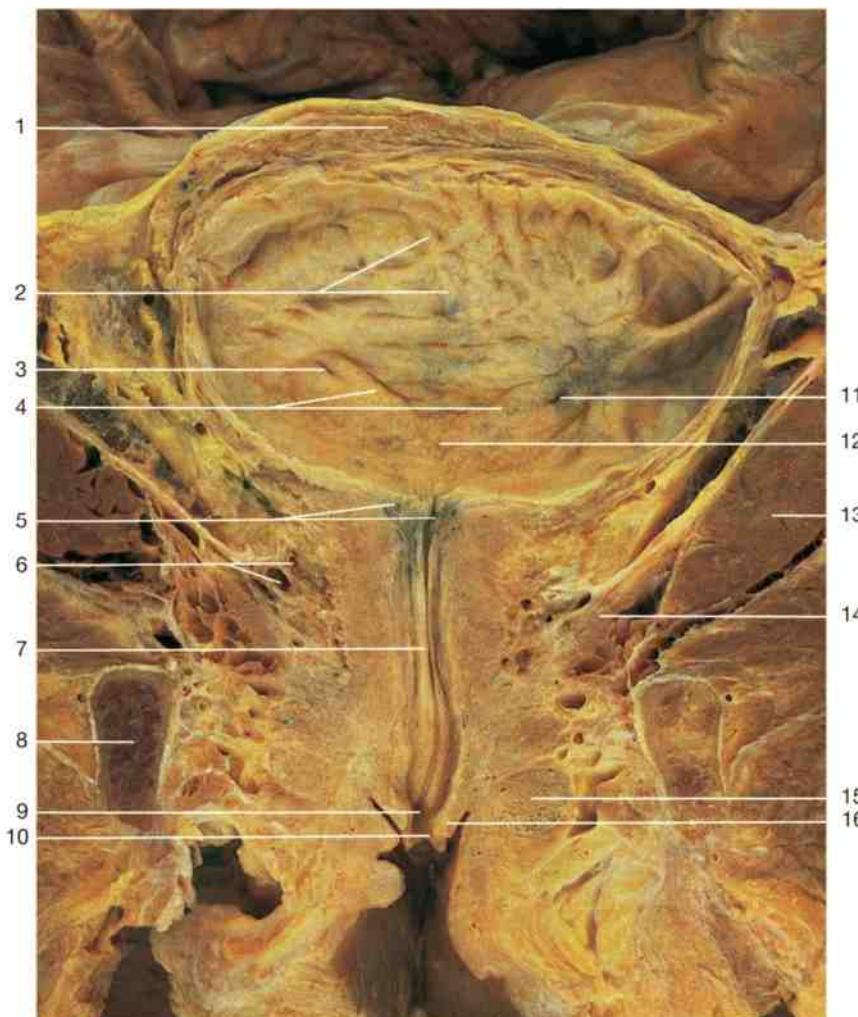

Female urogenital system, midsagittal section through the trunk. The urinary bladder is empty, position and shape of the uterus are normal.

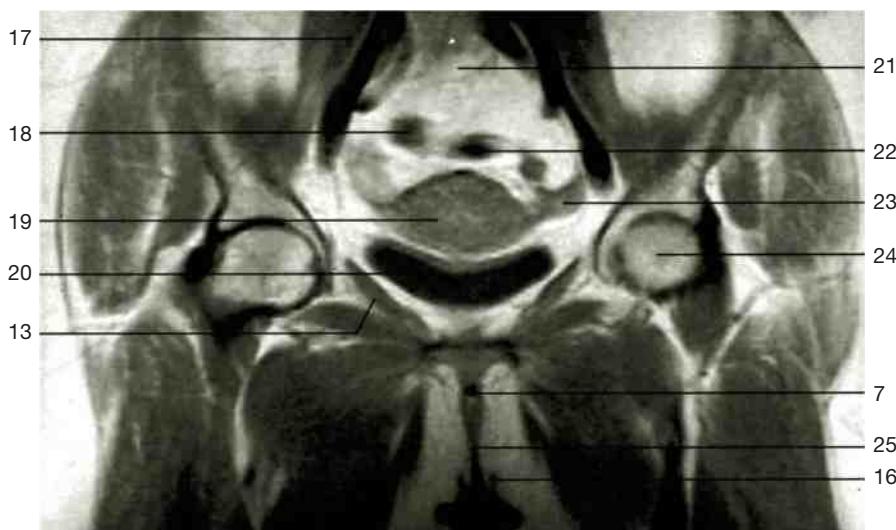

- 1 Umbilicus
- 2 Duodenum
- 3 Ascending part of duodenum
- 4 Root of mesentery
- 5 Small intestine
- 6 Mesentery
- 7 Rectus abdominis muscle
- 8 Uterus
- 9 Vesico-uterine pouch
- 10 Urinary bladder (collapsed)
- 11 Pubic symphysis
- 12 Anterior fornix of vagina
- 13 Urethra
- 14 Clitoris
- 15 Labium minus
- 16 Labium majus
- 17 Vertebral canal with cauda equina
- 18 Intervertebral disc
- 19 Body of fifth lumbar vertebra
- 20 Sacral promontory
- 21 Mesosigmoid
- 22 Sigmoid colon
- 23 Recto-uterine pouch (of Douglas)
- 24 Ampulla of rectum
- 25 Posterior fornix of vagina
- 26 Cervix of uterus
- 27 External anal sphincter muscle
- 28 Anal canal
- 29 Vagina
- 30 Internal anal sphincter muscle
- 31 Anus
- 32 Hymen
- 33 Left ureter
- 34 Peritoneum (cut edge)
- 35 Right ureter (divided)
- 36 Median umbilical fold with urachus
- 37 Infundibulum of uterine tube
- 38 Fimbriae of uterine tube
- 39 Ovary
- 40 Uterine tube (isthmus)
- 41 Round ligament of uterus

Positions of female genital organs (medial aspect, schematic drawing).

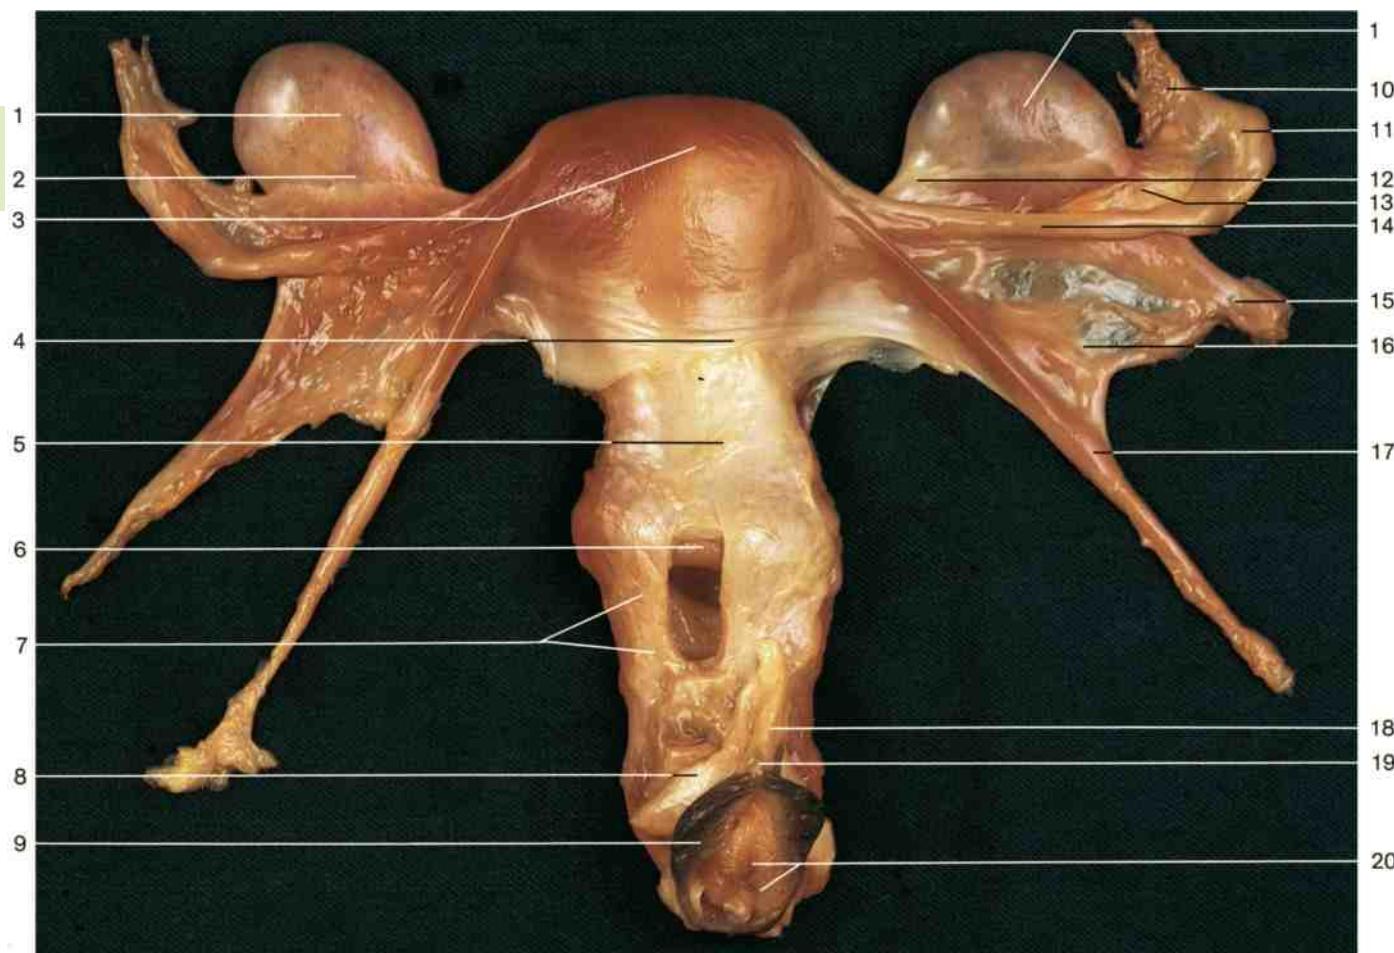

Coronal section through the female urinary bladder and urethra (anterior aspect).

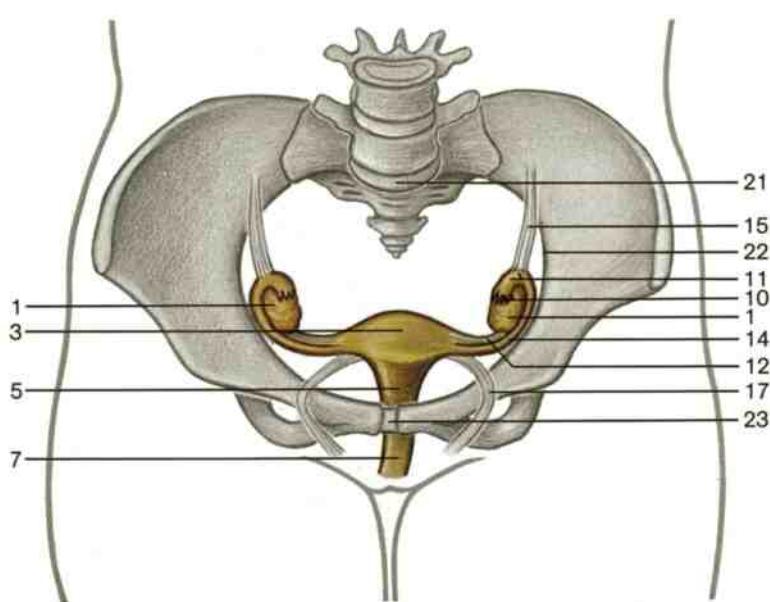

Coronal section through the pelvic cavity of the female (MRI scan).

- 1 Muscular coat of urinary bladder
- 2 Folds of mucous membrane of urinary bladder
- 3 Right ureteric orifice

The urogenital system of the female differs greatly from that of the male. During embryonal development, the uterus and ovary remain within the pelvic cavity where, after puberty, the ovulation takes place. Therefore, the urinary system remains functionally separated from the genital organs in the female.

Female genital organs, isolated (anterior aspect). The anterior wall of the vagina has been opened to display the vaginal portion of the cervix.

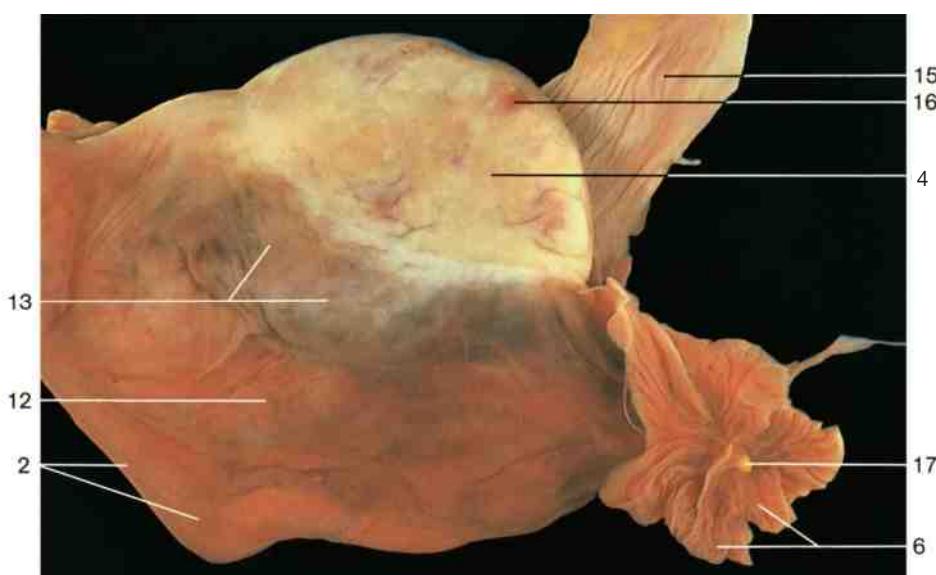

Female internal genital organs (schematic drawing).

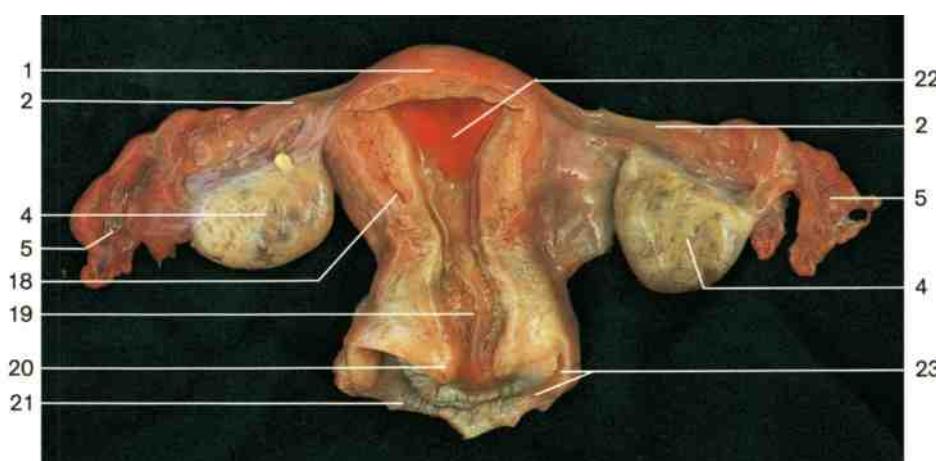

Female genital organs, isolated (supero-posterior aspect).

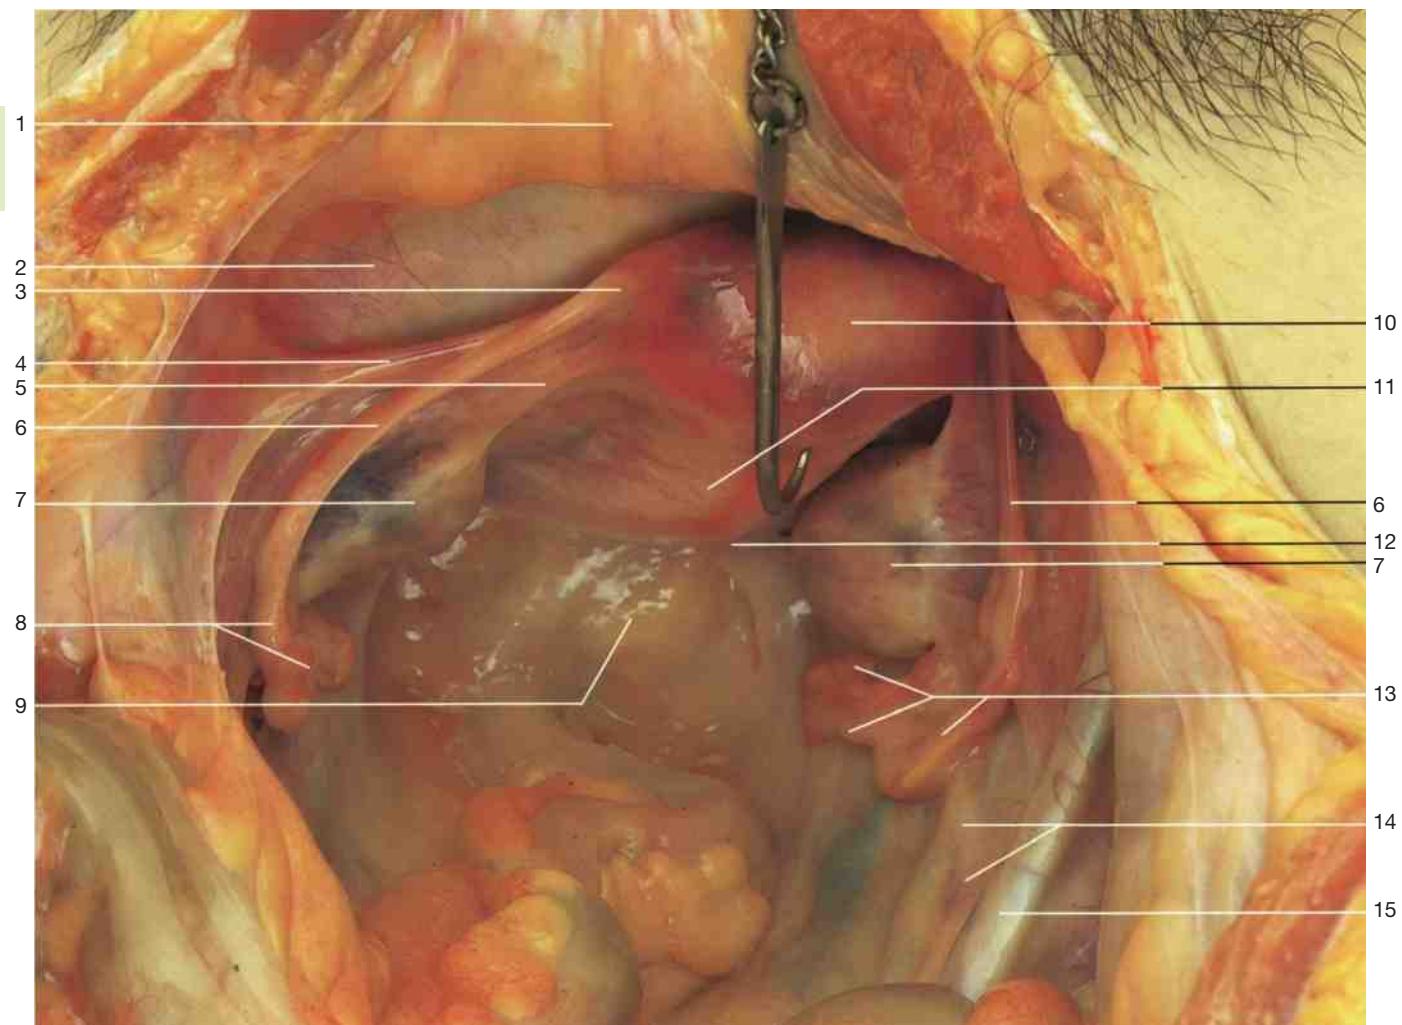

- 1 Fundus of uterus
- 2 Uterine tube
- 3 Ligament of the ovary
- 4 Ovary
- 5 Infundibulum of uterine tube
- 6 Fimbriae of uterine tube
- 7 Ureter
- 8 Rectum
- 9 Apex of urinary bladder and median umbilical ligament
- 10 Urinary bladder

Because of the human body's upright posture, the upper limb has developed a high degree of mobility. The shoulder girdle is to a great extent movable in the thorax and is connected with the trunk only by the sternoclavicular joint. A further characteristic of the forearm is the capacity for rotation (i.e., pronation and supination).

Skeleton of right wrist and hand (palmar aspect).

The human hand is one of the most admirable structures of the human body. The carpometacarpal joint of the thumb, a saddle joint, enjoys wide mobility so that the thumb can come into contact with all other fingers, thus enabling the hand to become an instrument for grasping and psychologic expression. During evolution, these newly developed functions

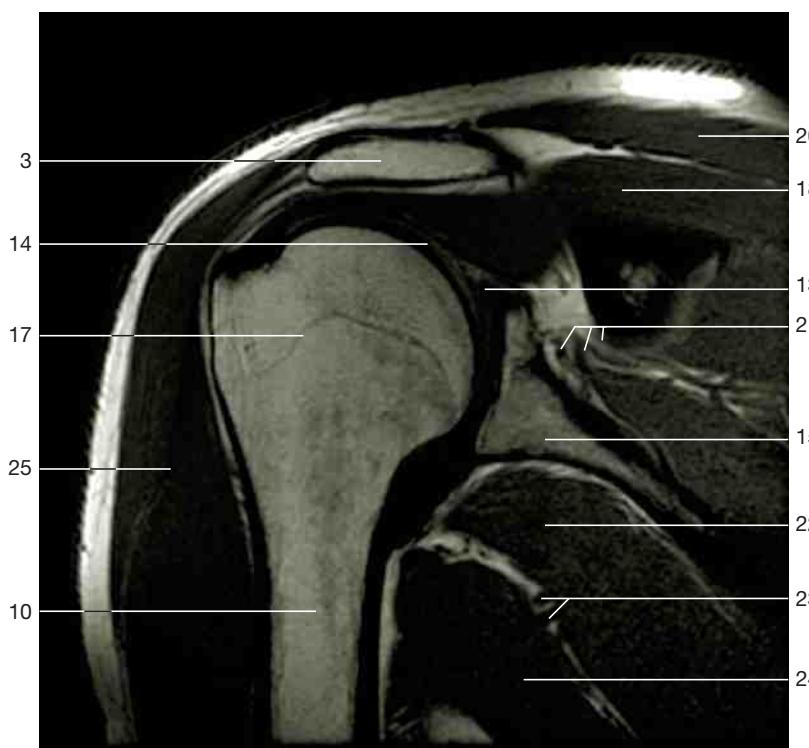

appeared after the erect posture of the human body was achieved. An inevitable prerequisite for the development of human cultures is not only the differentiation of the brain but also the development of an organ capable of realizing its ideas: the human hand.

Right shoulder joint. The anterior part of the articular capsule has been removed and the head of the humerus has been slightly rotated outward to show the cavity of the joint.

Ligaments of hand and wrist (dorsal aspect).

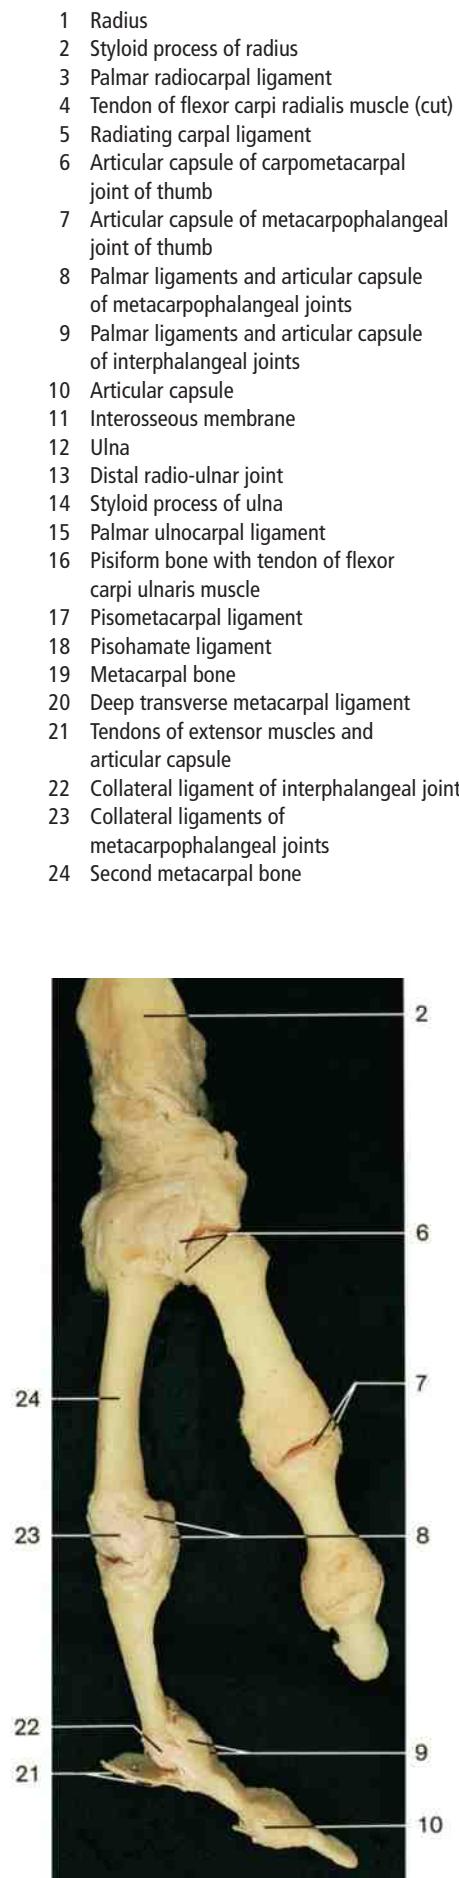

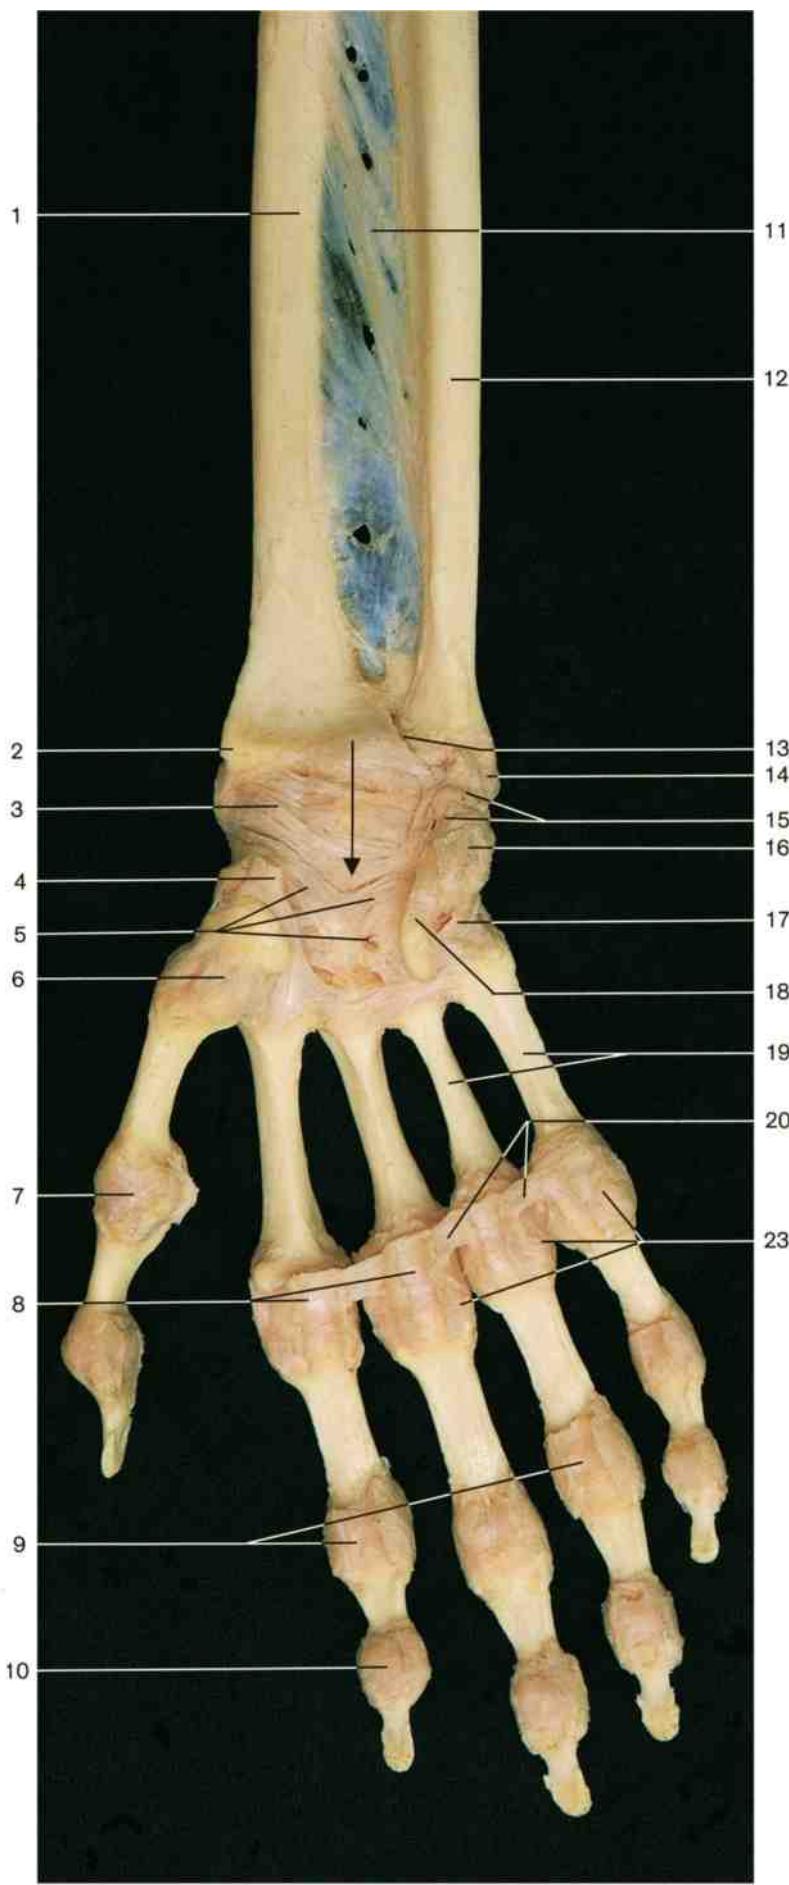

Ligaments of hand and wrist (palmar aspect).

- Coronal section of the hand and wrist (MRI scan; from Heuck et al., MRT-Atlas, 2009). Note the location of the wrist joint.
-
- This coronal MRI scan of the hand and wrist provides a cross-sectional view of the carpal bones, metacarpals, and phalanges. The carpal bones visible include the scaphoid (labeled 29), lunate (labeled 26), triquetrum (labeled 27), and hamate (labeled 30). The metacarpals (labeled 31) and phalanges (labeled 32) are also shown. The wrist joint is clearly delineated between the carpal and metacarpal bones. A legend on the right side of the image lists numbered anatomical structures:
- 1 Ulna
 - 2 Exostosis (pathological)
 - 3 Head of ulna
 - 4 Ulnar carpal collateral ligament
 - 5 Deep intercarpal ligaments
 - 6 Dorsal carpometacarpal ligaments
 - 7 Dorsal metacarpal ligaments

Muscles of shoulder and arm, deeper layer (right side, dorsal aspect). The trapezius muscle has been cut near its origin at the vertebral column and reflected upward.

- 1 Splenius capitis muscle
- 2 Sternocleidomastoid muscle
- 3 Trapezius muscle (reflected)
- 4 Lateral supraclavicular nerves
- 5 Clavicle
- 6 Levator scapulae muscle
- 7 Supraspinatus muscle
- 8 Spine of scapula
- 9 Deltoid muscle (reflected)
- 10 Rhomboid minor muscle
- 11 Rhomboid major muscle
- 12 Axillary nerve and posterior circumflex humeral artery
- 13 Infraspinatus muscle
- 14 Teres minor muscle
- 15 Long head of triceps brachii muscle
- 16 Teres major muscle
- 17 Inferior angle of scapula
- 18 Triceps brachii muscle
- 19 Latissimus dorsi muscle

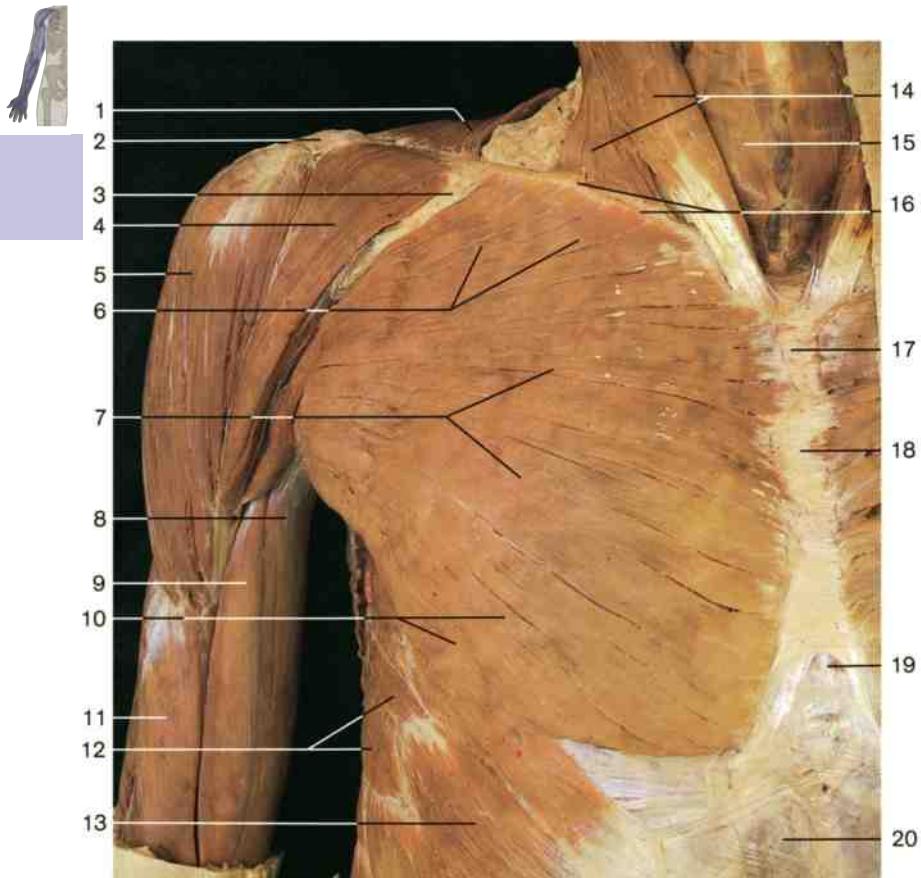

Muscles of shoulder and arm, deeper layer (right side, dorsal aspect).
The trapezius and deltoid muscles have been divided and reflected.

Shoulder muscles, schematic diagram illustrating the course of the main muscles of the dorsal aspect of the shoulder.

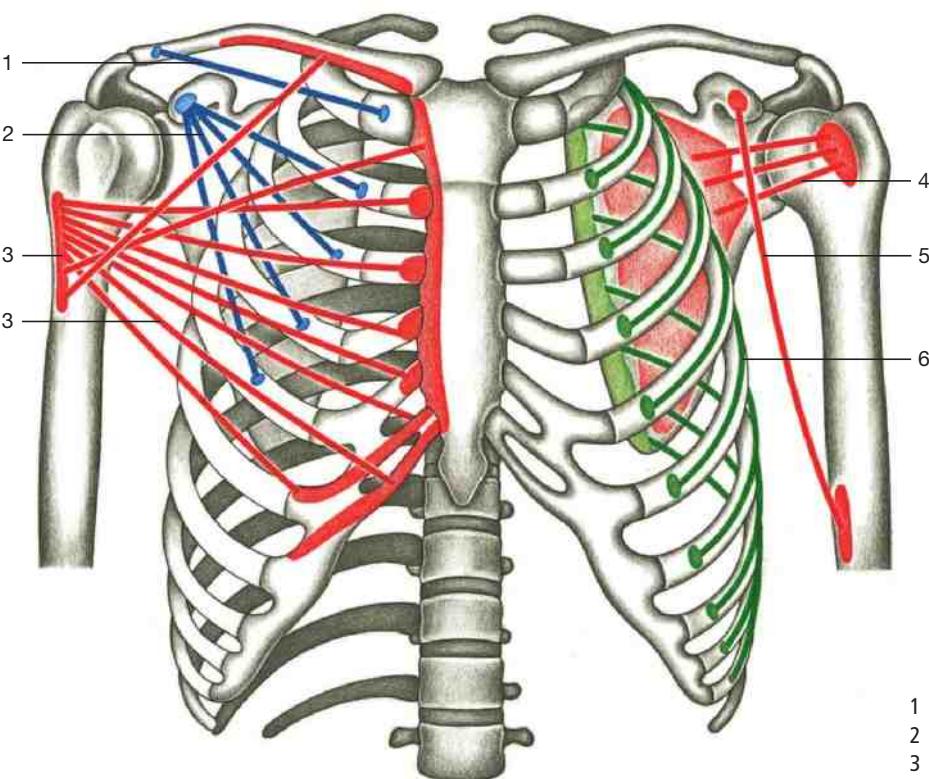

- 1 Rhomboid minor muscle (red)
- 2 Rhomboid major muscle (red)
- 3 Levator scapulae muscle (red)
- 4 Supraspinatus muscle (blue)
- 5 Deltoid muscle (red)
- 6 Infraspinatus muscle (blue)
- 7 Teres minor muscle (red)
- 8 Teres major muscle (red)

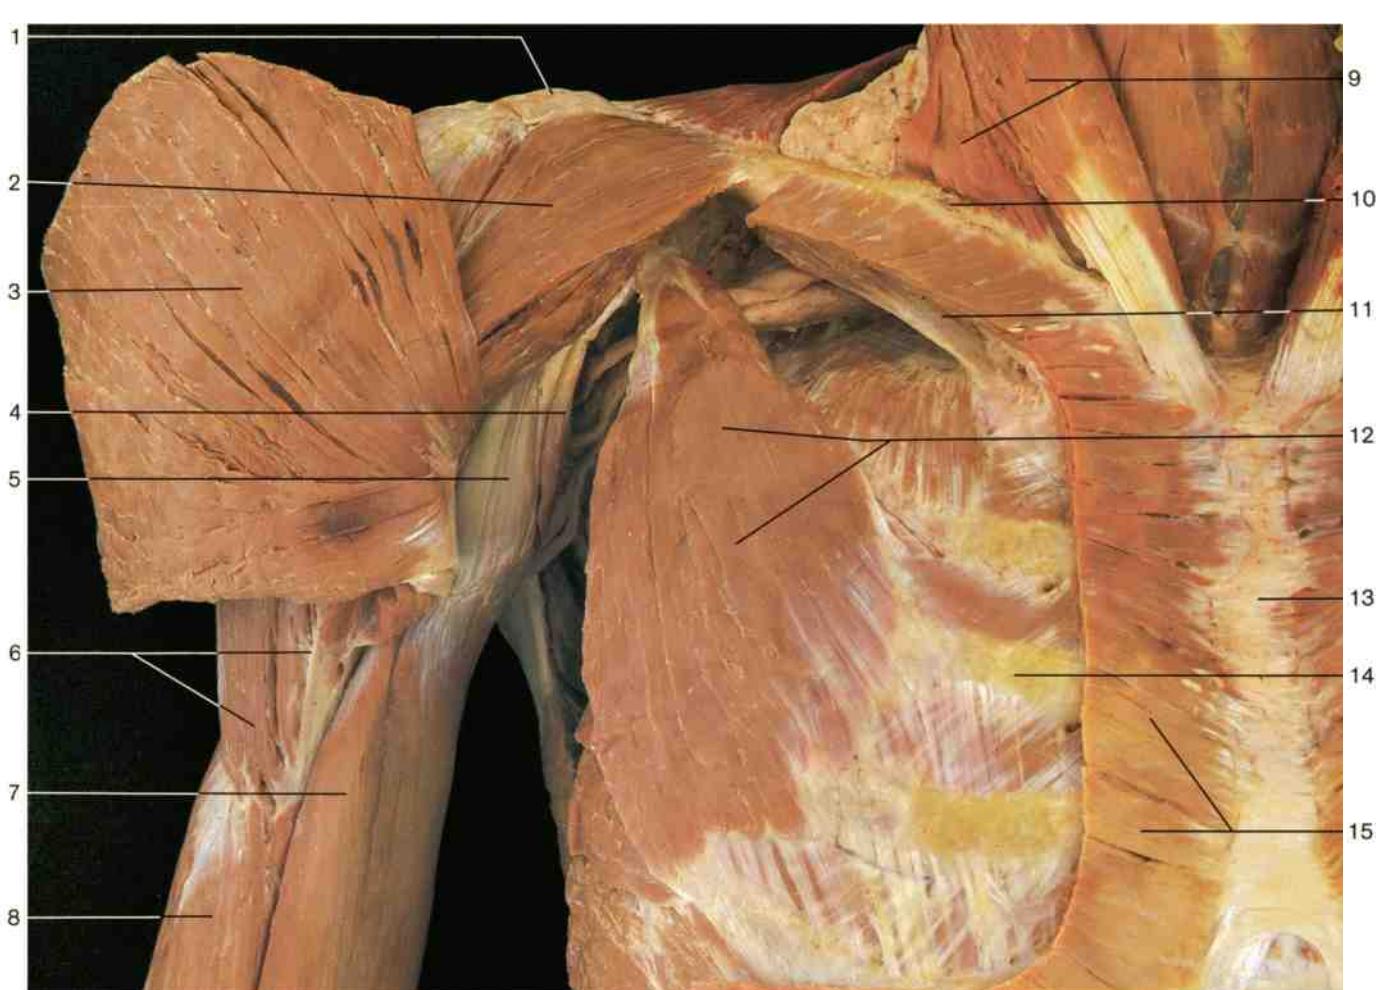

- 1 Trapezius muscle
- 2 Acromion
- 3 Deltopectoral triangle
- 4 Clavicular part of deltoid muscle (anterior fibers)
- 5 Acromial part of deltoid muscle (central fibers)
- 6 Clavicular part of pectoralis major muscle
- 7 Sternocostal part of pectoralis major muscle
- 8 Short head of biceps brachii muscle
- 9 Long head of biceps brachii muscle
- 10 Abdominal part of pectoralis major muscle
- 11 Brachialis muscle
- 12 Serratus anterior muscle
- 13 External abdominal oblique muscle
- 14 Sternocleidomastoid muscle
- 15 Infrahyoid muscles
- 16 Clavicle
- 17 Manubrium sterni
- 18 Body of sternum
- 19 Xiphoid process
- 20 Anterior layer of sheath of rectus abdominis muscle

Shoulder, arm, and pectoral muscles, superficial layer (ventral aspect).

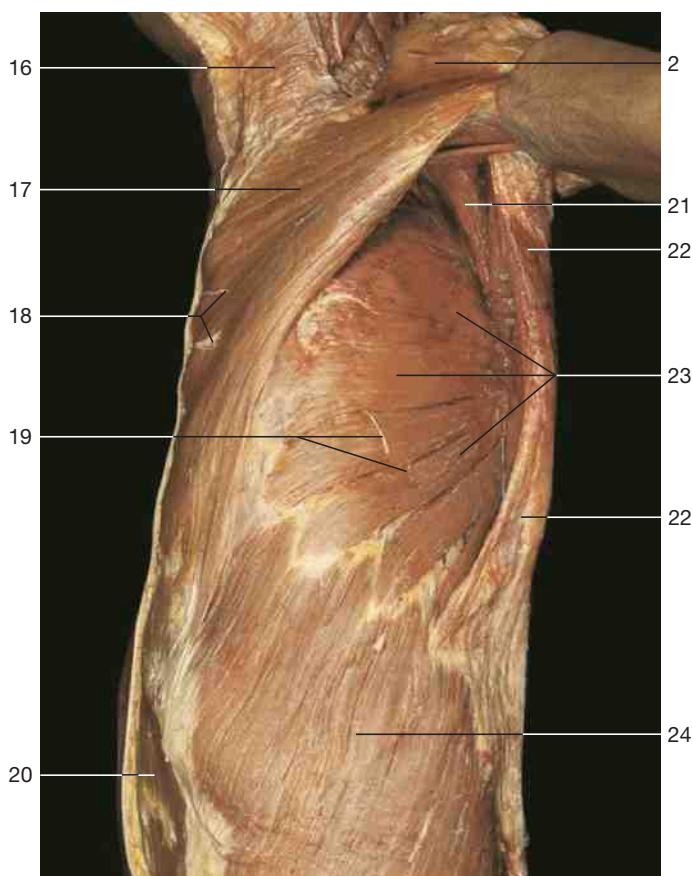

Arrangement of pectoral and shoulder muscles (ventral aspect).
(Schematic drawing.)

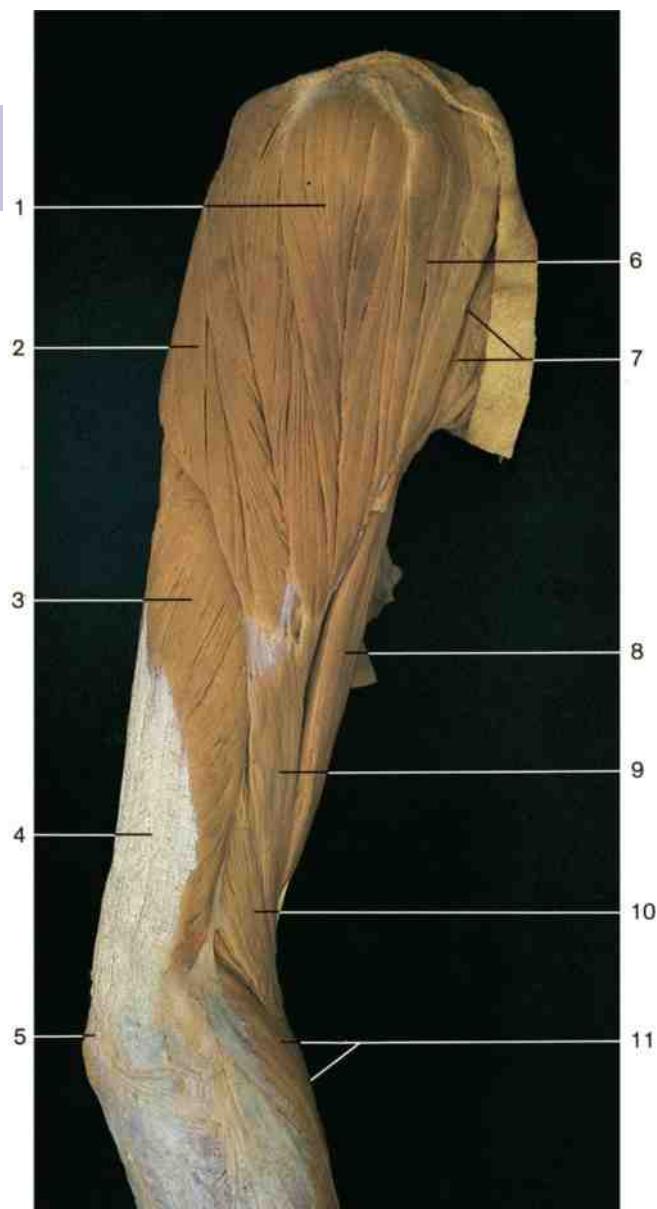

- 1 Subclavius muscle (blue)
- 2 Pectoralis minor muscle (blue)
- 3 Pectoralis major muscle (red)
- 4 Subscapularis muscle (red)
- 5 Coracobrachialis muscle (red)
- 6 Serratus anterior muscle (green)

Shoulder, arm, and pectoral muscles, deep layer (ventral aspect).

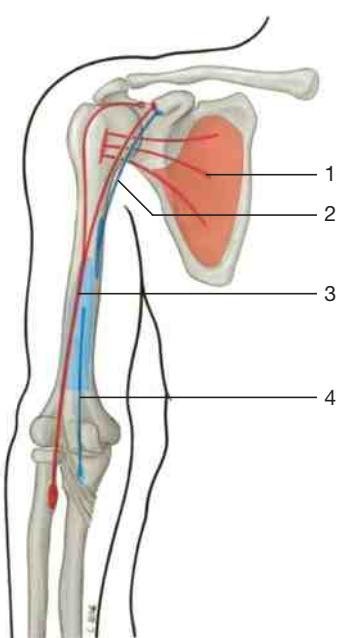

Axillary fossa and serratus anterior muscle
(left side, lateral aspect).

Muscles of the right arm (lateral aspect).

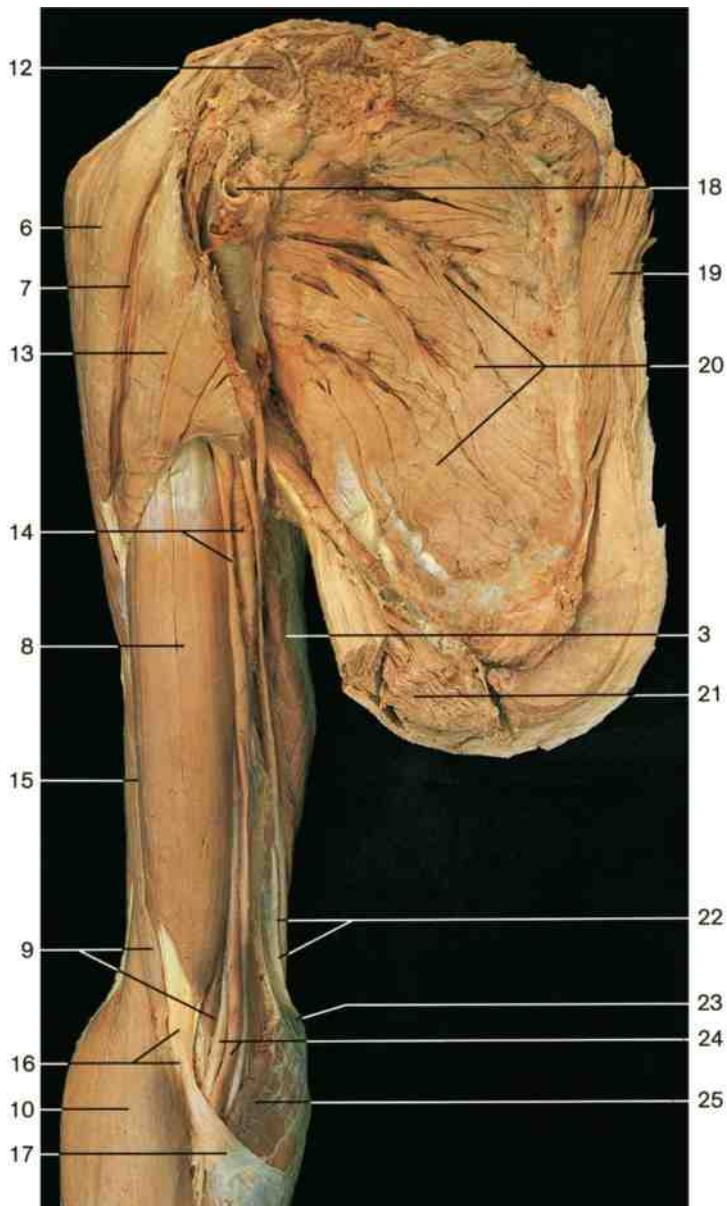

Sagittal section of the right arm (MRI scan;
from Heuck et al., MRT-Atlas, 2009).

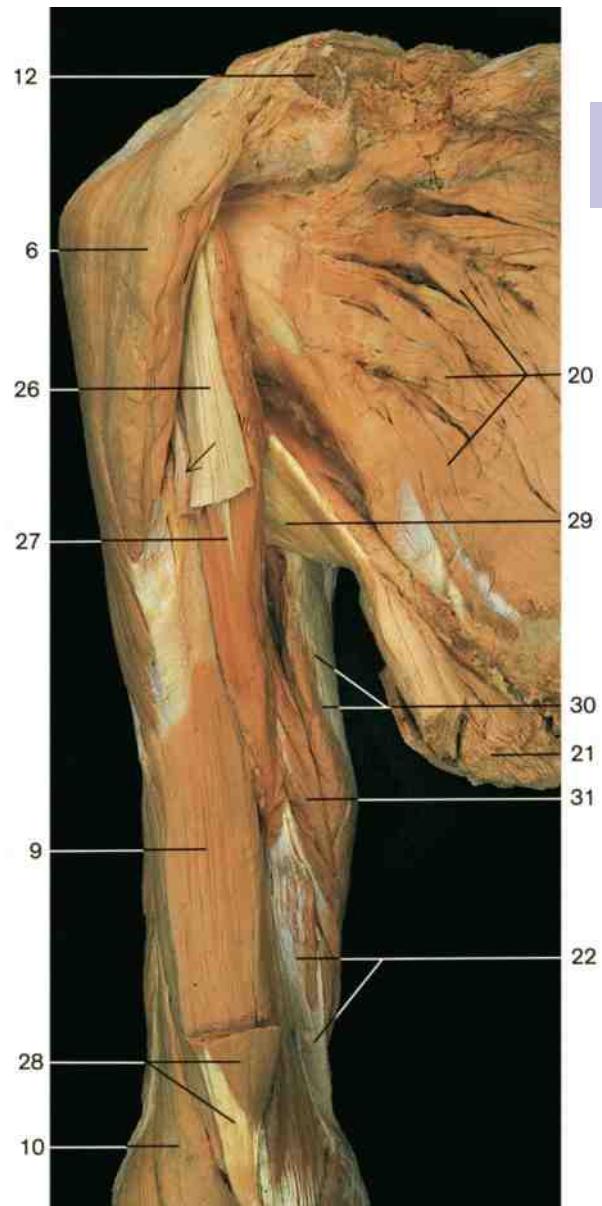

Position and course of flexors of arm (schematic drawing).

- | | |
|----------------------------------|-------------------------------|
| 1 Subscapularis muscle (red) | 3 Biceps brachii muscle (red) |
| 2 Coracobrachialis muscle (blue) | 4 Brachialis muscle (blue) |

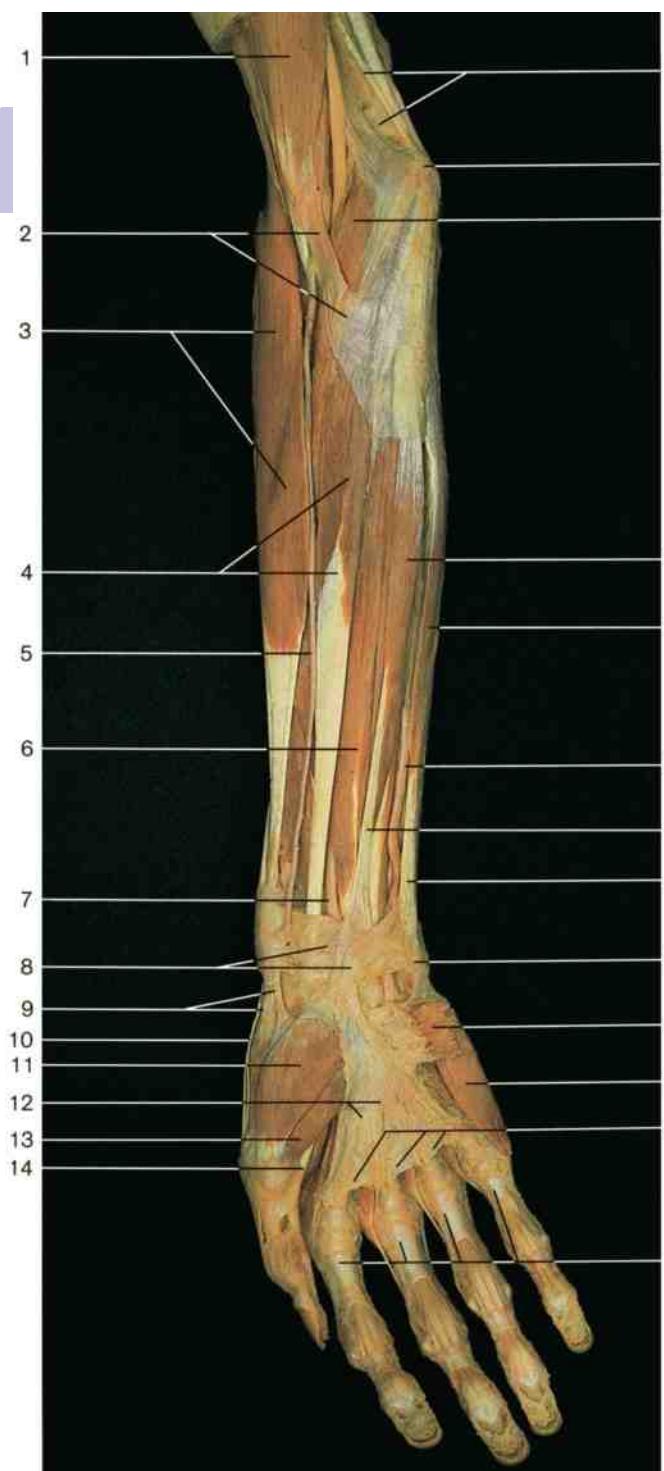

Muscles of the right arm (ventral aspect). The arm with the scapula and attached muscles has been removed from the trunk.

- 1 Acromial part of deltoid muscle (central fibers)
- 2 Scapular part of deltoid muscle (posterior fibers)
- 3 Triceps brachii muscle
- 4 Tendon of triceps brachii muscle
- 5 Olecranon
- 6 Clavicular part of deltoid muscle (anterior fibers)
- 7 Deltpectoral groove
- 8 Biceps brachii muscle
- 9 Brachialis muscle
- 10 Brachioradialis muscle
- 11 Extensor carpi radialis longus muscle
- 12 Clavicle (divided)
- 13 Pectoralis major muscle
- 14 Medial intermuscular septum with vessels and nerves
- 15 Lateral intermuscular septum
- 16 Tendon of biceps brachii muscle
- 17 Bicipital aponeurosis
- 18 Axillary artery
- 19 Rhomboid major muscle

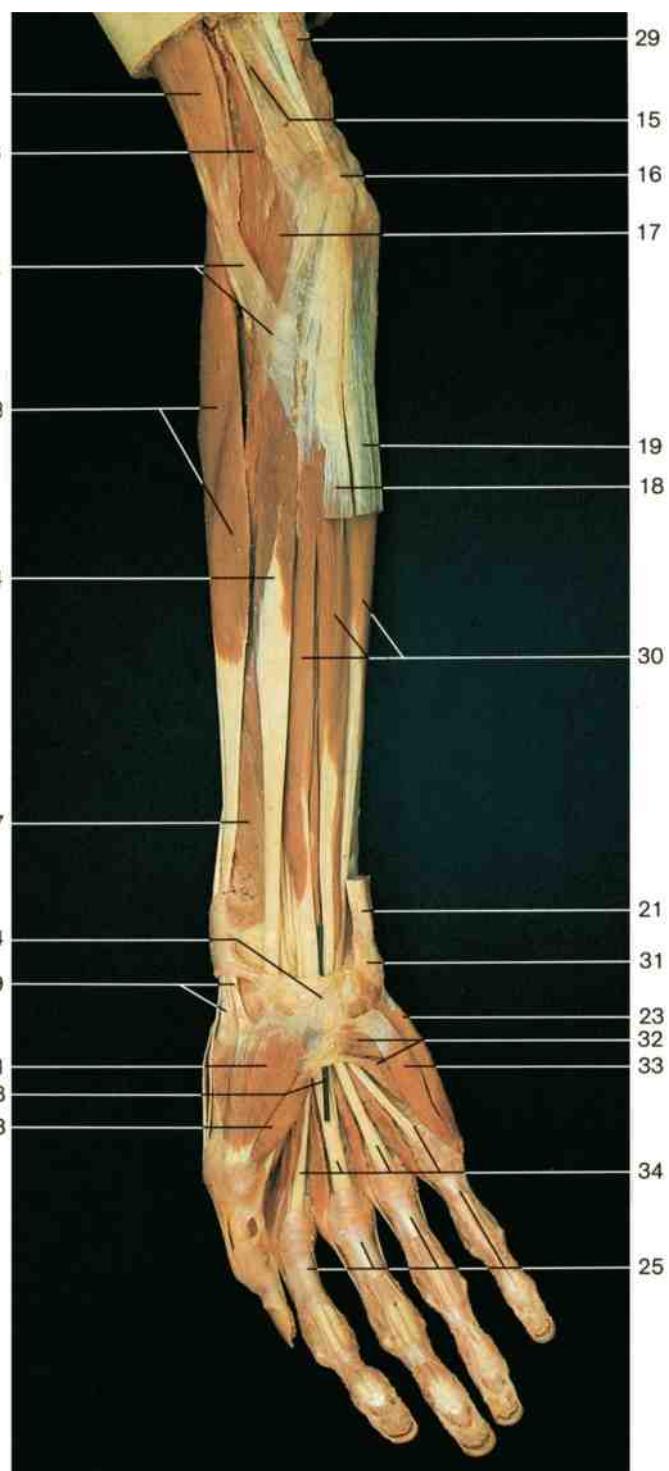

Muscles of the right arm (ventral aspect). Part of the biceps brachii muscle has been removed. Arrow: tendon of long head of biceps brachii muscle.

- 20 Subscapularis muscle
- 21 Latissimus dorsi muscle (divided)
- 22 Medial intermuscular septum
- 23 Medial epicondyle of humerus
- 24 Brachial artery and median nerve
- 25 Pronator teres muscle
- 26 Tendon of short head of biceps brachii muscle
- 27 Coracobrachialis muscle
- 28 Distal part of biceps brachii muscle
- 29 Teres major muscle
- 30 Long head of triceps brachii muscle

- 25 Hypotenar muscles
- 26 Thenar muscles
- 27 Common synovial sheath of flexor tendons
- 28 Synovial sheath of tendon of flexor pollicis longus muscle
- 29 Digital synovial sheaths of flexor tendons

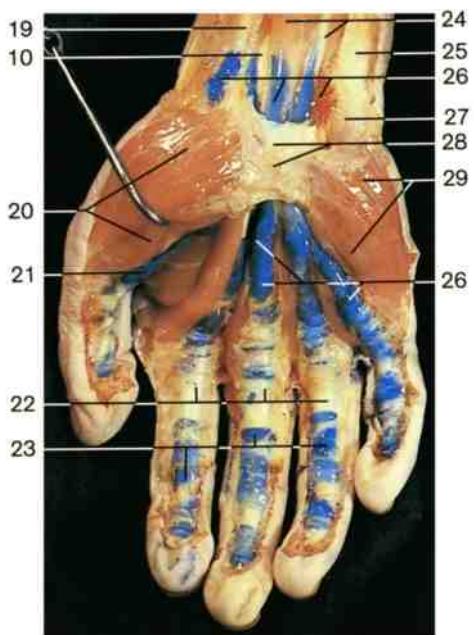

Flexor muscles of forearm and hand, deep layer (ventral aspect).
All flexors have been removed to display the pronator quadratus and pronator teres muscles together with the interosseous membrane. Forearm in supination.

Synovial sheaths of flexor tendons (palmar aspect of right hand, semischematic drawing).

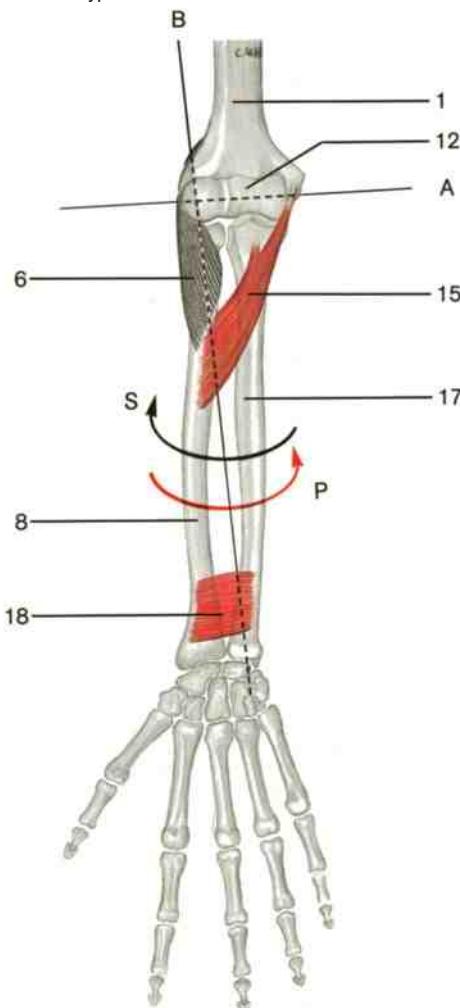

Right supinator and elbow joint
(ventral aspect). Forearm in pronation.

Synovial sheaths of flexor tendons
(palmar aspect of right hand). Blue PVA
solution has been injected into the sheaths.

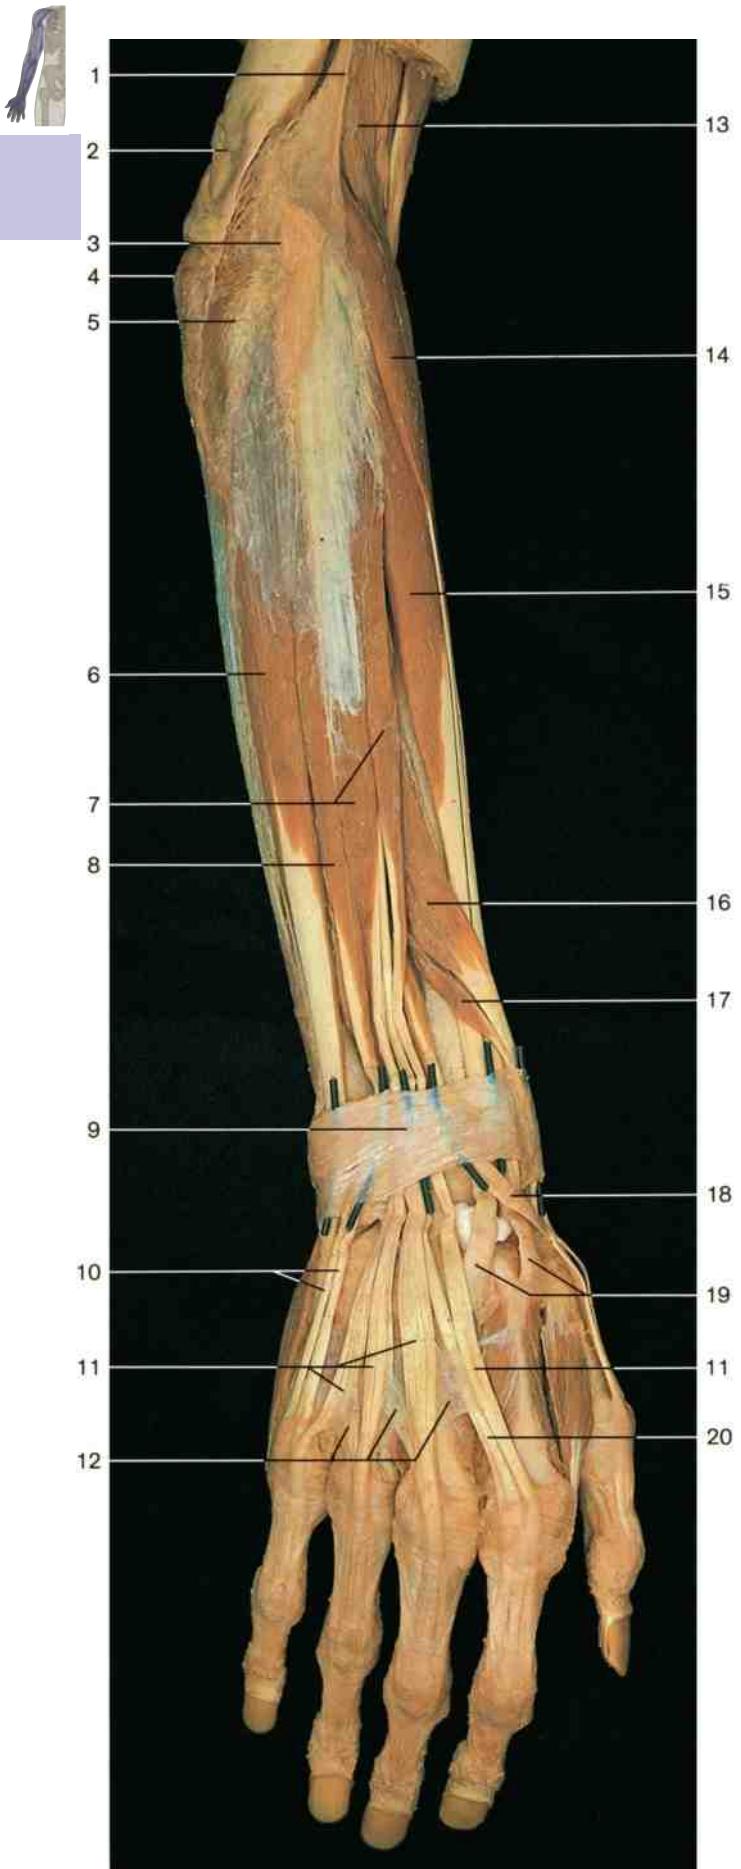

- 1 Humerus
- 2 Lateral epicondyle of humerus
- 3 Articular capsule
- 4 Position of capitulum of humerus
- 5 Deep branch of radial nerve
- 6 Supinator muscle
- 7 Entrance of deep branch of radial nerve to extensor muscles
- 8 Radius and insertion of pronator teres muscle
- 9 Interosseous membrane
- 10 Median nerve
- 11 Triceps brachii muscle
- 12 Trochlea of humerus
- 13 Tendon of biceps brachii muscle
- 14 Brachial artery
- 15 Pronator teres muscle
- 16 Tendon of pronator teres muscle
- 17 Ulna
- 18 Pronator quadratus muscle
- 19 Tendon of flexor carpi radialis muscle
- 20 Thenar muscles
- 21 Synovial sheath of tendon of flexor pollicis longus muscle
- 22 Fibrous sheath of flexor tendons
- 23 Digital synovial sheath of flexor tendons
- 24 Flexor digitorum superficialis muscle
- 25 Tendon of flexor carpi ulnaris muscle
- 26 Common synovial sheath of flexor tendons
- 27 Position of pisiform bone
- 28 Flexor retinaculum
- 29 Hypothenar muscles

A = axis of flexion and extension
B = axis of rotation

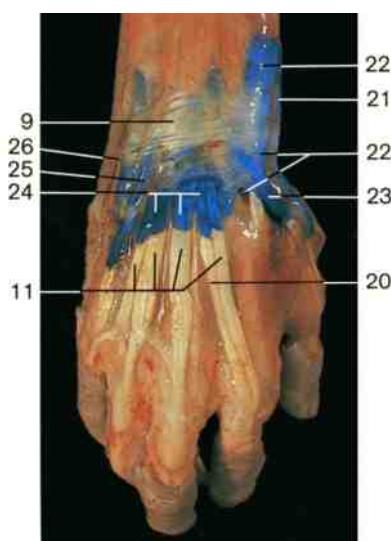

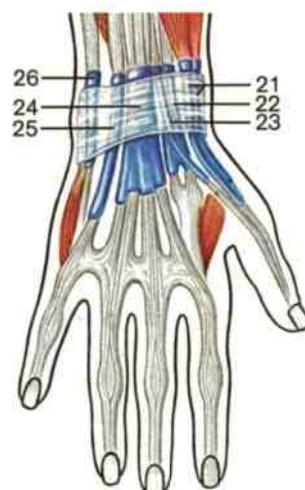

Arrows:
S = supination
P = pronation

Diagram illustrating the two axes of the elbow joint.

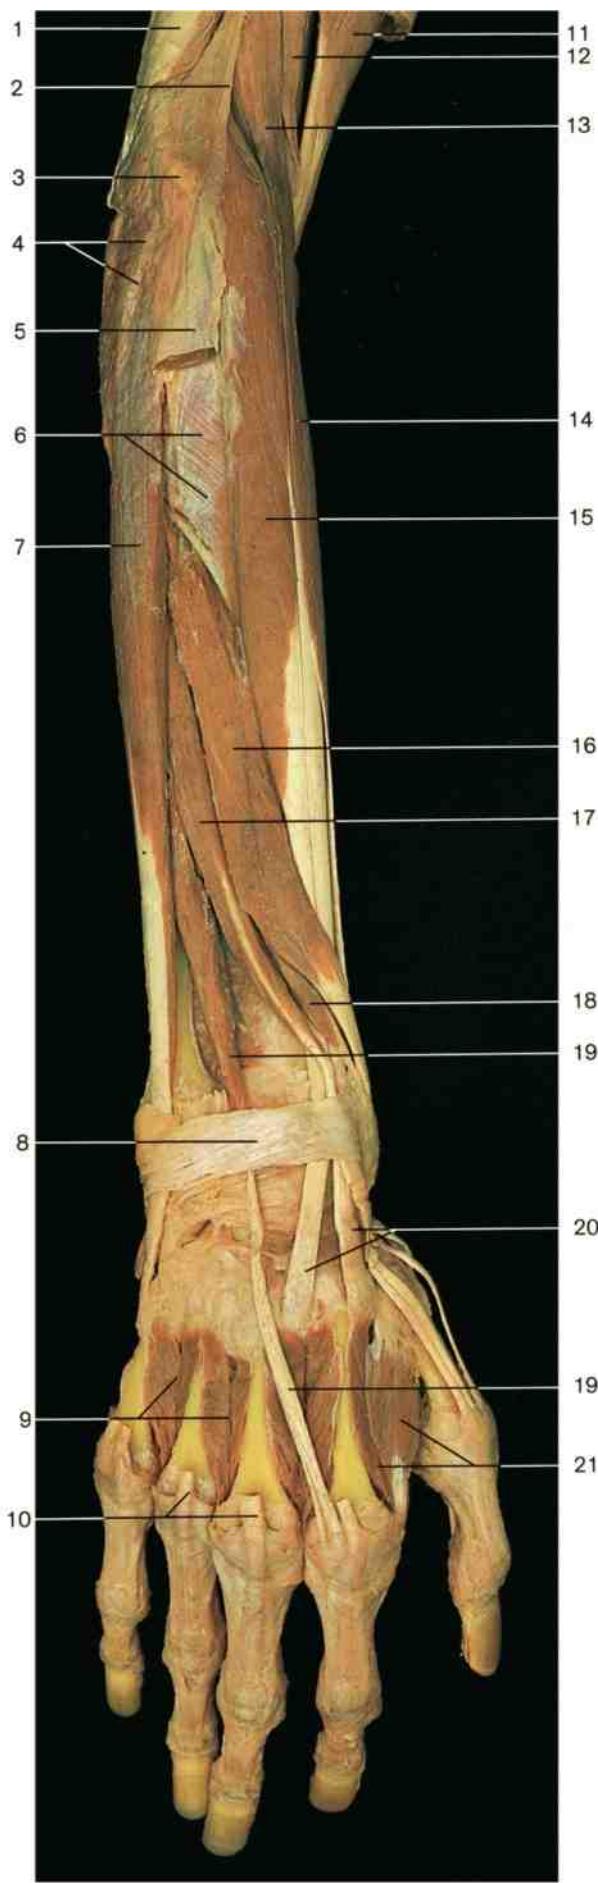

Extensor muscles of forearm and hand, superficial layer (dorsal aspect). Tunnels for extensor tendons indicated by probes.

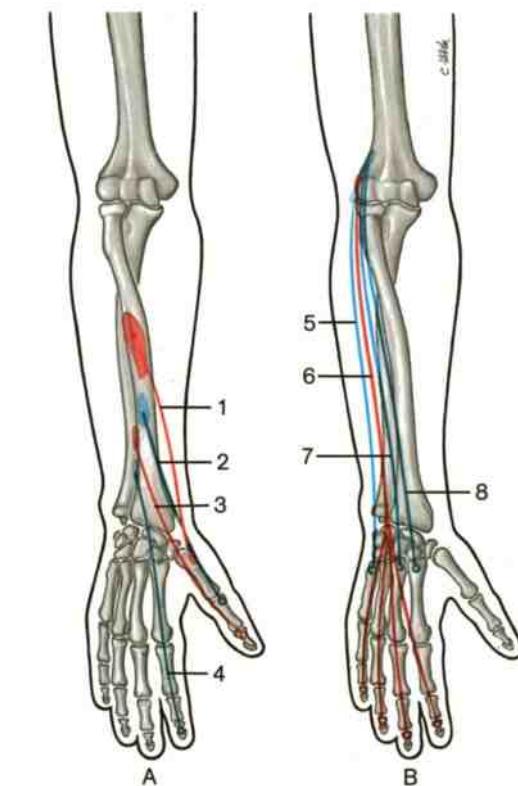

- Synovial sheaths of extensor tendons on the back of the right wrist (indicated in blue). Notice the six tunnels for the passage of the extensor tendons beneath the extensor retinaculum (schematic drawing).

Synovial sheaths of extensor tendons. The sheaths have been injected with blue gelatin.

- 1 Triceps brachii muscle
- 2 Lateral intermuscular septum
- 3 Lateral epicondyle of humerus
- 4 Anconeus muscle
- 5 Extensor digitorum and extensor digiti minimi muscles (cut)
- 6 Supinator muscle
- 7 Extensor carpi ulnaris muscle
- 8 Extensor retinaculum
- 9 Third and fourth dorsal interosseous muscles
- 10 Tendons of extensor digitorum muscle (cut)
- 11 Biceps brachii muscle
- 12 Brachialis muscle
- 13 Brachioradialis muscle
- 14 Extensor carpi radialis longus muscle
- 15 Extensor carpi radialis brevis muscle
- 16 Abductor pollicis longus muscle
- 17 Extensor pollicis longus muscle
- 18 Extensor pollicis brevis muscle
- 19 Extensor indicis muscle
- 20 Tendons of the extensor carpi radialis longus and extensor carpi radialis brevis muscles
- 21 First dorsal interosseous muscle

Position of extensor muscles of forearm and hand (schematic drawing).

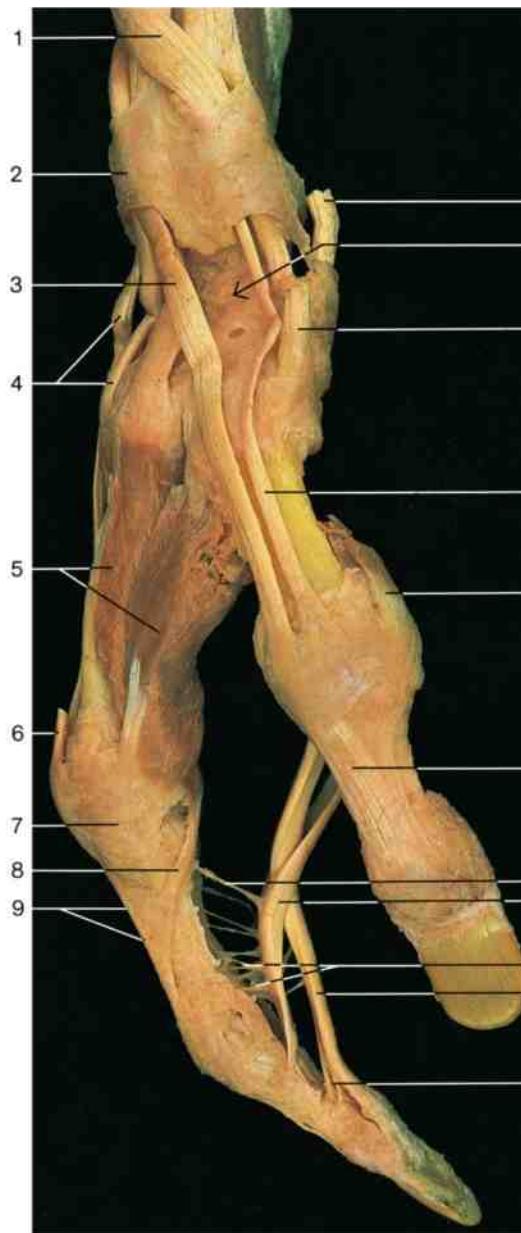

Extensor muscles of forearm and hand, deep layer (dorsal aspect).

A Extensors of thumb

- 1 Abductor pollicis longus muscle (red)
- 2 Extensor pollicis brevis muscle (blue)
- 3 Extensor pollicis longus muscle (red)
- 4 Extensor indicis muscle (blue)

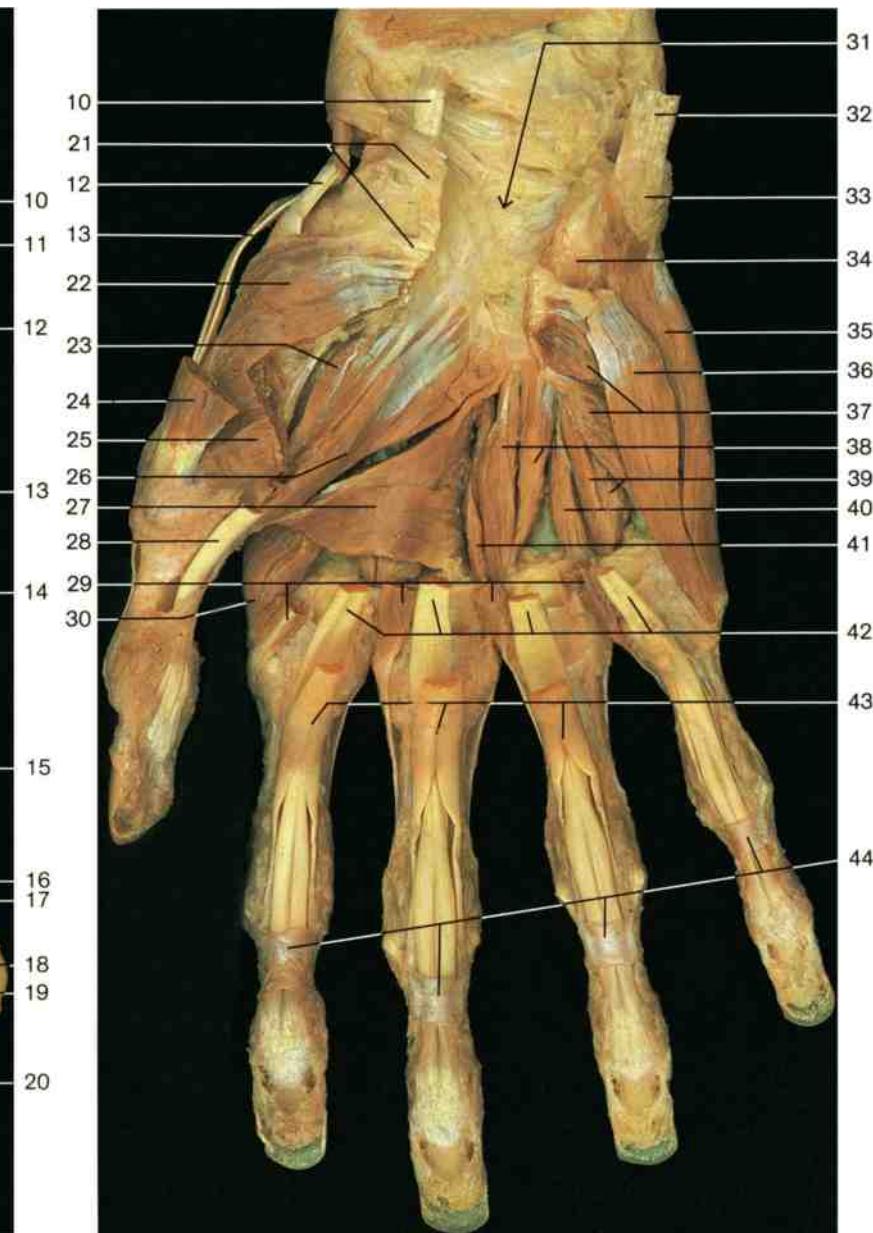

B Extensors of fingers and hand

- 5 Extensor carpi ulnaris muscle (blue)
- 6 Extensor digitorum muscle (red)
- 7 Extensor carpi radialis brevis muscle (blue)
- 8 Extensor carpi radialis longus muscle (blue)

Muscles of thumb and index finger (medial aspect).
The tendons of the extensor muscles of the thumb and the insertion of the flexor tendons of the index finger are displayed.

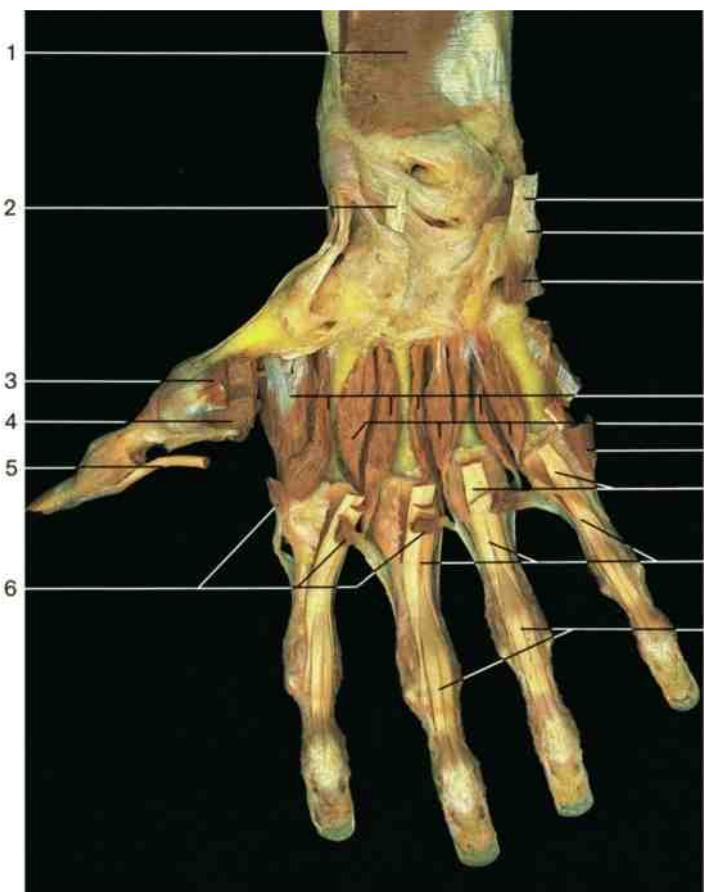

- 1 Tendons of extensor pollicis brevis and abductor pollicis longus muscle
- 2 Extensor retinaculum
- 3 Tendon of extensor pollicis longus muscle
- 4 Tendons of extensor carpi radialis longus and brevis muscles
- 5 First dorsal interosseous muscle
- 6 Tendon of extensor digitorum muscle for index finger
- 7 Location of metacarpophalangeal joint
- 8 Tendon of lumbrical muscle
- 9 Extensor expansion of index finger
- 10 Tendon of flexor carpi radialis muscle (cut)
- 11 Anatomical snuffbox
- 12 Tendon of abductor pollicis longus muscle
- 13 Tendon of extensor pollicis brevis muscle
- 14 Tendon of abductor pollicis brevis muscle

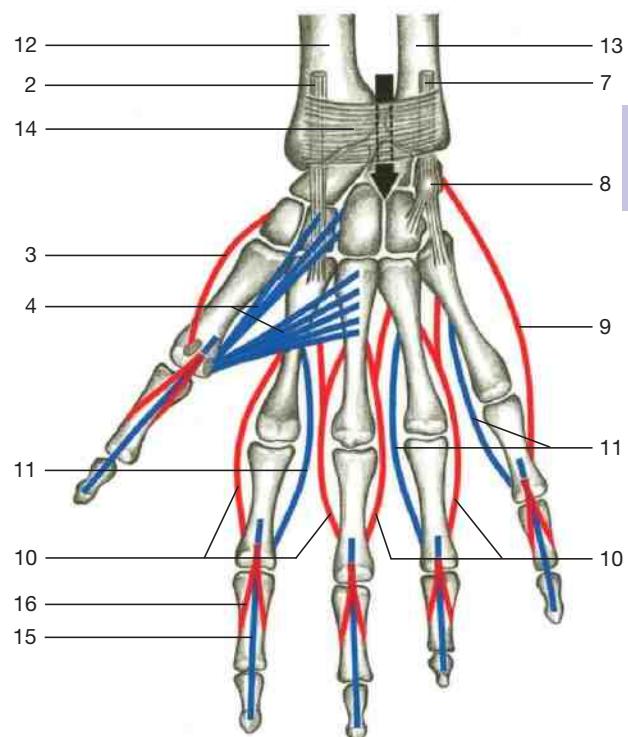

Muscles of right hand (palmar aspect). The tendons of the flexor muscles and parts of the thumb muscles have been removed. The carpal tunnel has been opened.

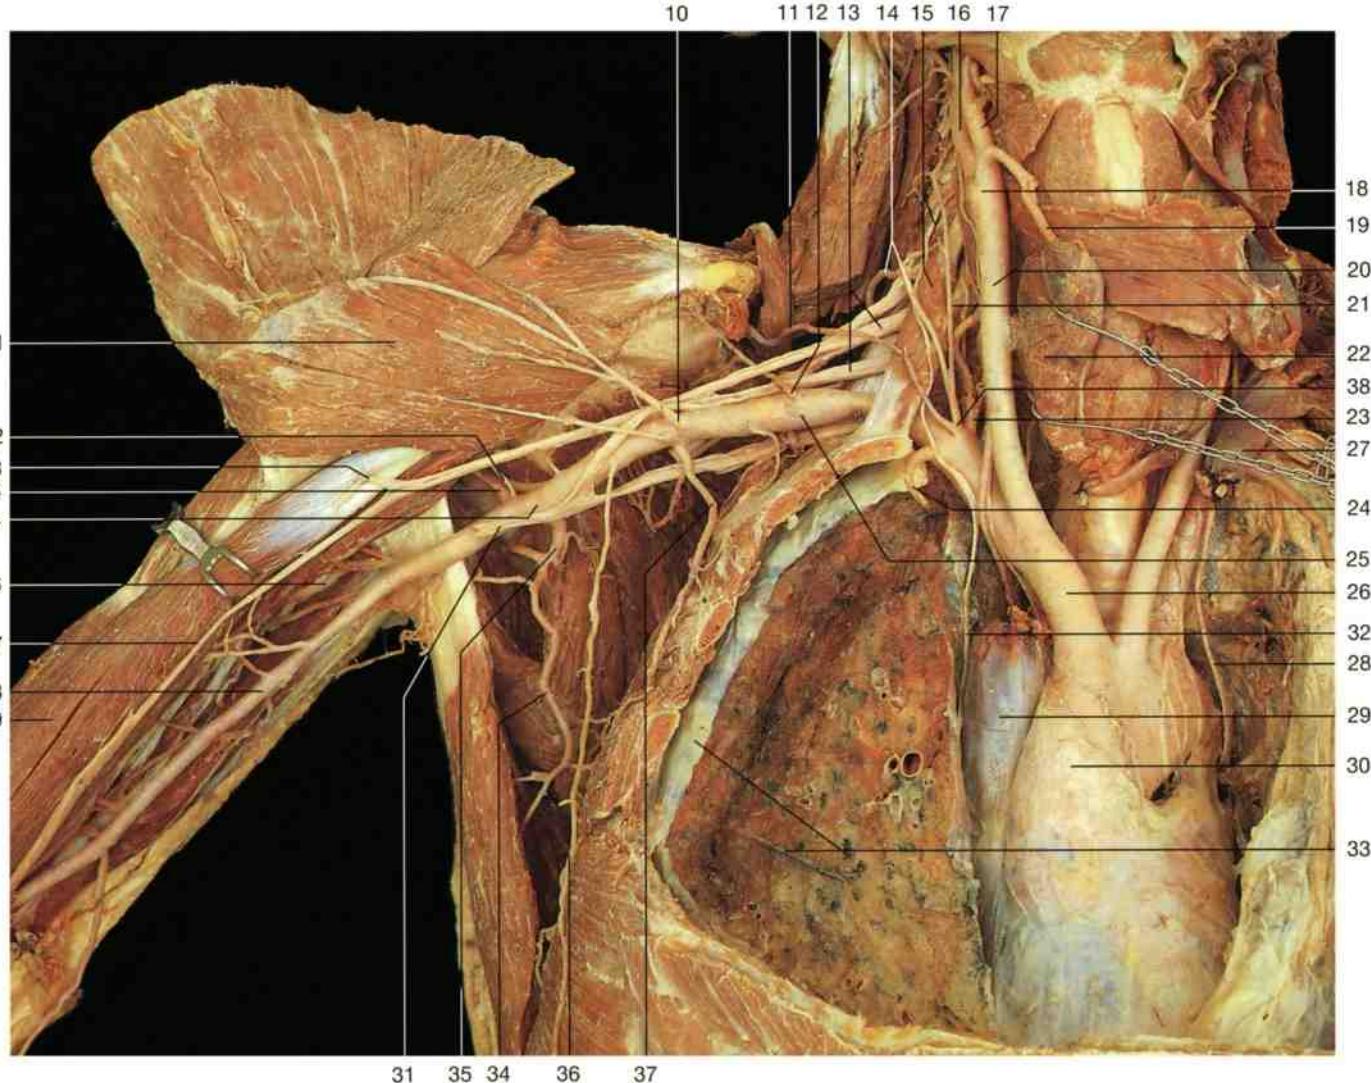

- 15 Extensor expansion of extensor of thumb
- 16 Vinculum longum
- 17 Tendons of flexor digitorum superficialis muscle dividing to allow passage of deep tendons
- 18 Vincula of flexor tendons
- 19 Tendon of flexor digitorum profundus muscle
- 20 Vinculum breve
- 21 Radial carpal eminence (cut edge of flexor retinaculum)
- 22 Opponens pollicis muscle
- 23 Deep head of flexor pollicis brevis muscle
- 24 Abductor pollicis brevis muscle (cut)
- 25 Superficial head of flexor pollicis brevis muscle (cut)
- 26 Oblique head of adductor pollicis muscle
- 27 Transverse head of adductor pollicis muscle
- 28 Tendon of flexor pollicis longus muscle (cut)

- 40 Palmar branch of ulnar nerve

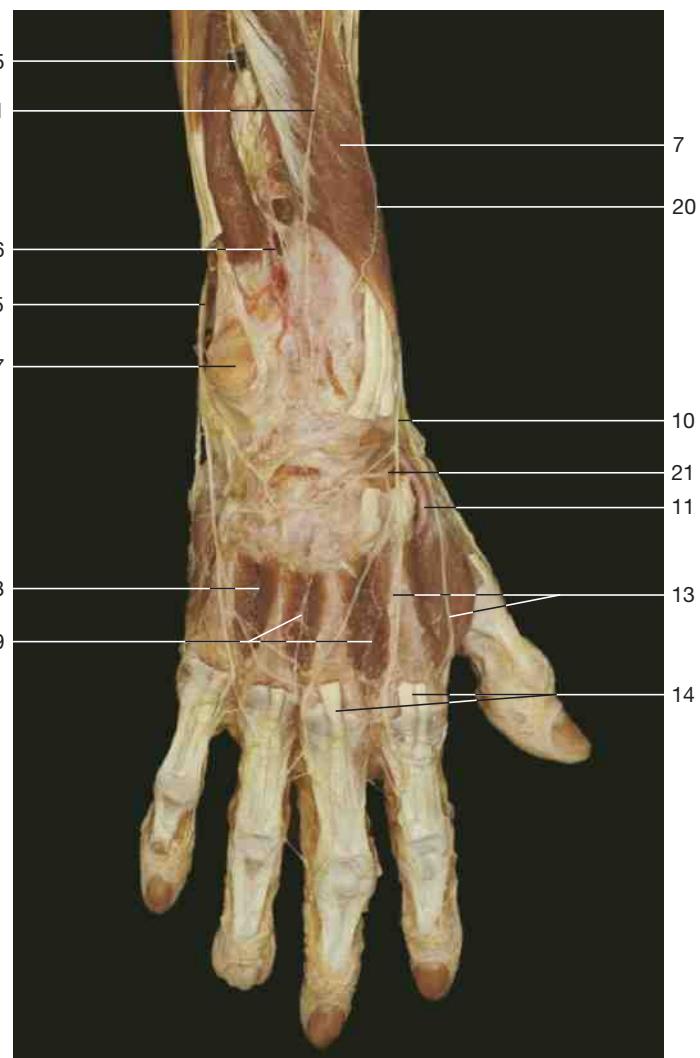

Vessels and nerves of forearm and hand, deep layer (palmar aspect). The superficial layer of the flexor muscles has been removed.

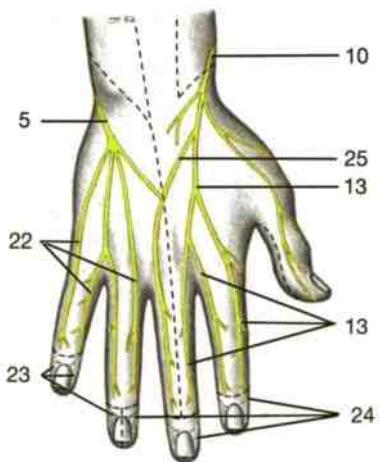

Innervation pattern of palmar surfaces of hand.
3½ digits by median nerve, 1½ digits by ulnar nerve.

Posterior region of hand (superficial layer).
Cutaneous nerves and veins are depicted.

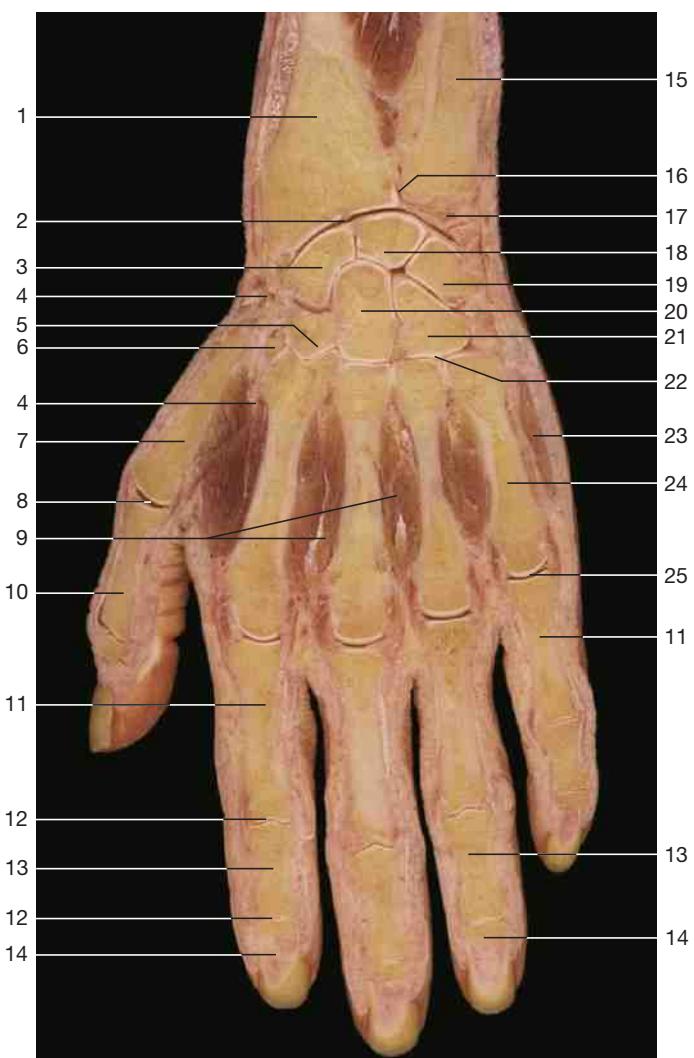

Posterior region of hand (deeper layer).
Extensor digitorum muscle has been partly removed.

Innervation pattern of posterior surfaces of hand.
2½ digits by radial nerve, 2½ digits by ulnar nerve. Note that the terminal branches to the dorsal surfaces of the distal phalanges are derived from the palmar digital nerves. The cutaneous distribution varies; often 3½ digits are innervated by the radial and 1½ digits by the ulnar nerve.

Axial section through the middle of the right forearm (section 4; inferior aspect).

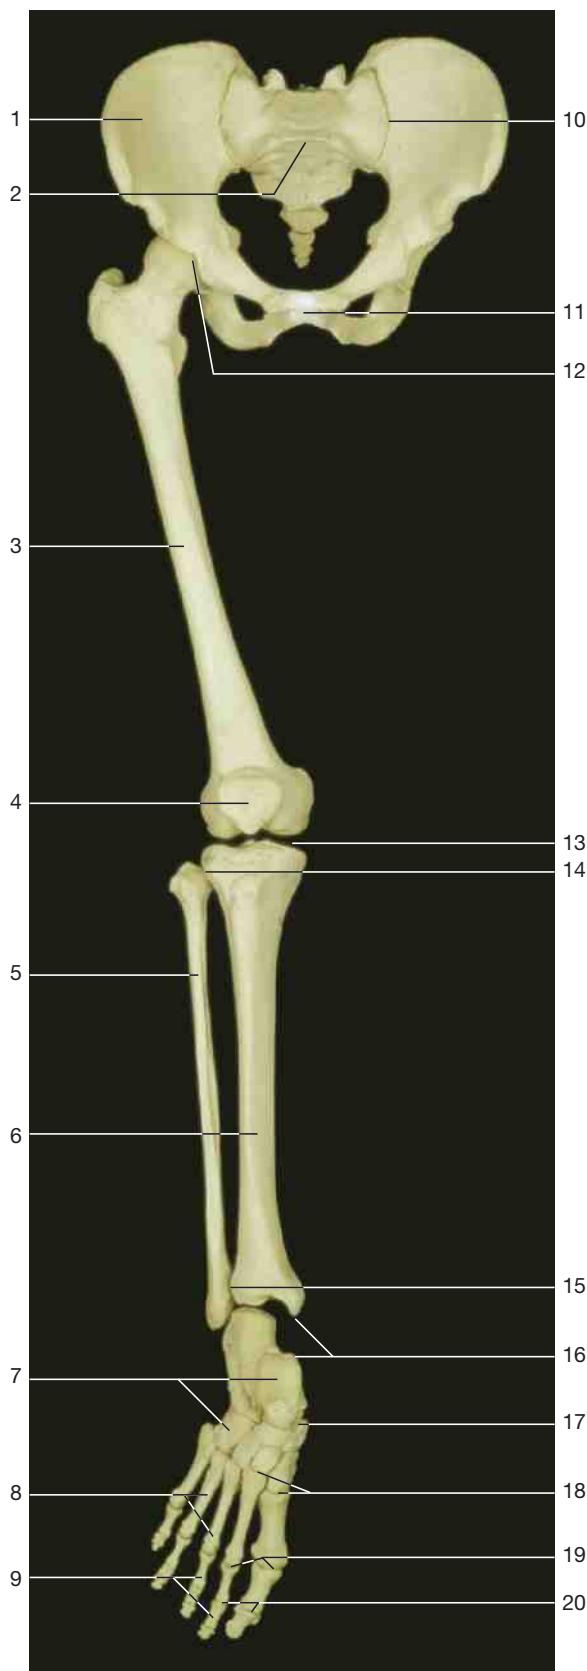

Axial section through the right hand at the level of the metacarpus (section 5; MRI scan; inferior aspect).

Axial section through the right hand at the level of the metacarpus (section 5; inferior aspect).

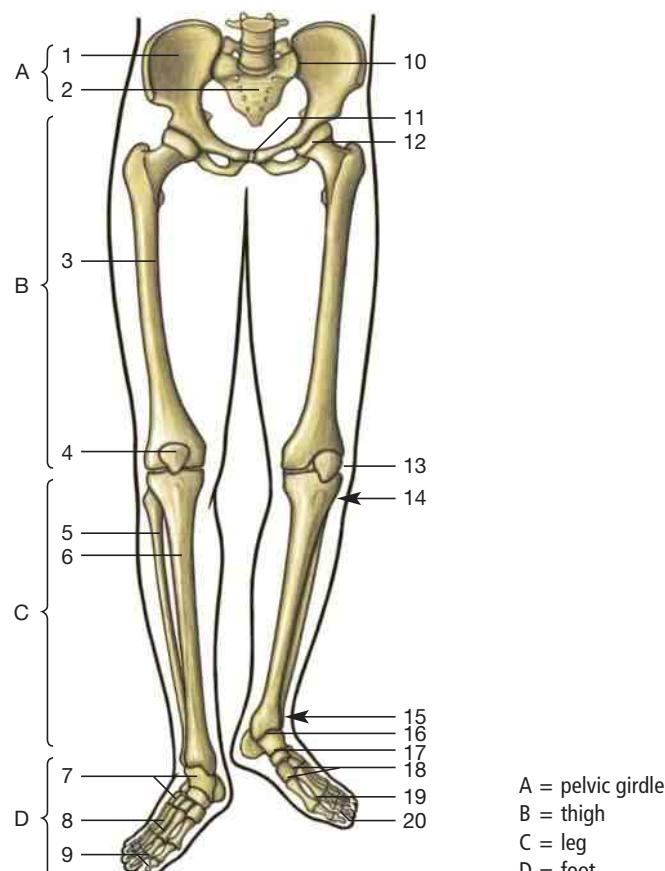

8 Lower Limb

Skeleton of pelvic girdle and lower limb (anterior aspect). The ankle joint has been dislocated.

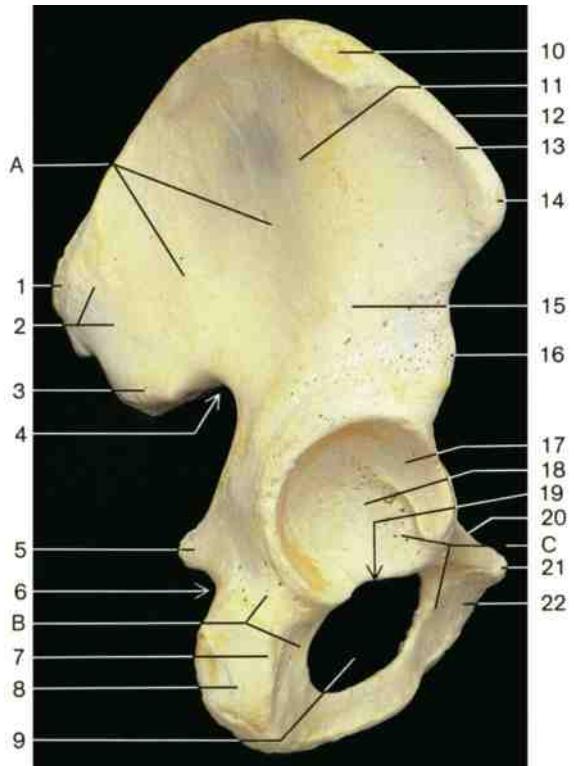

The lower limb (extremity) is specialized for support of the upright posture, locomotion, and maintaining balance. In contrast to the upper limb, the lower limb is more restricted in its movements, and the joints are tighter and fixed by strong ligaments. The hip joint is a ball-and-socket type of synovial joint between the head of the femur and acetabulum. The knee joint is a hinge type of synovial joint that permits only limited rotation. The talocrural joint is a hinge joint between the talus, fibula, and tibia, only allowing movements of flexion and extension.

The long axis of the foot is at a right angle to that of the leg, thus forming an effective arch for the upright stance of the body.

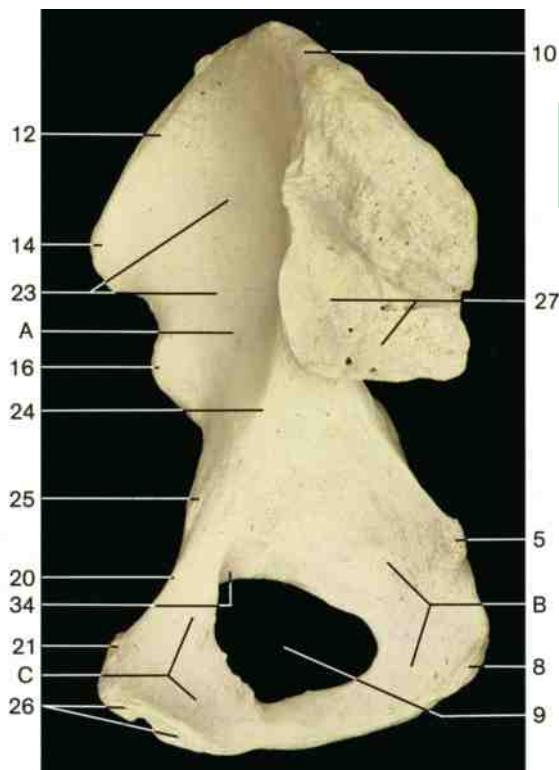

Organization of pelvic girdle and lower limb.

Right hip bone (lateral aspect).

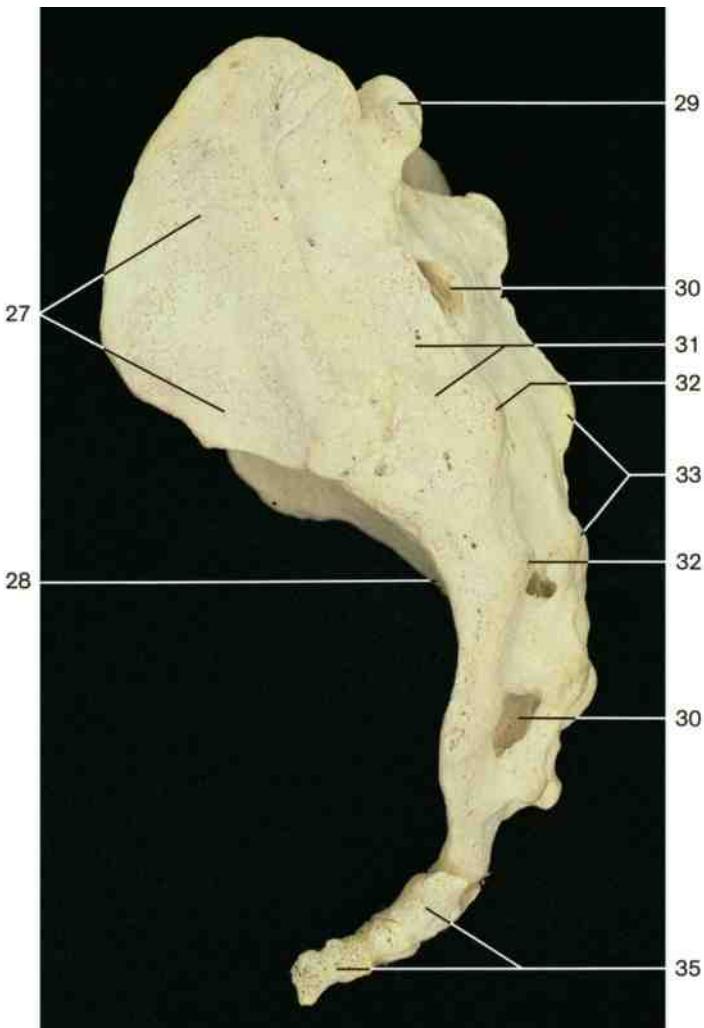

Right hip bone (medial aspect).

A = ilium

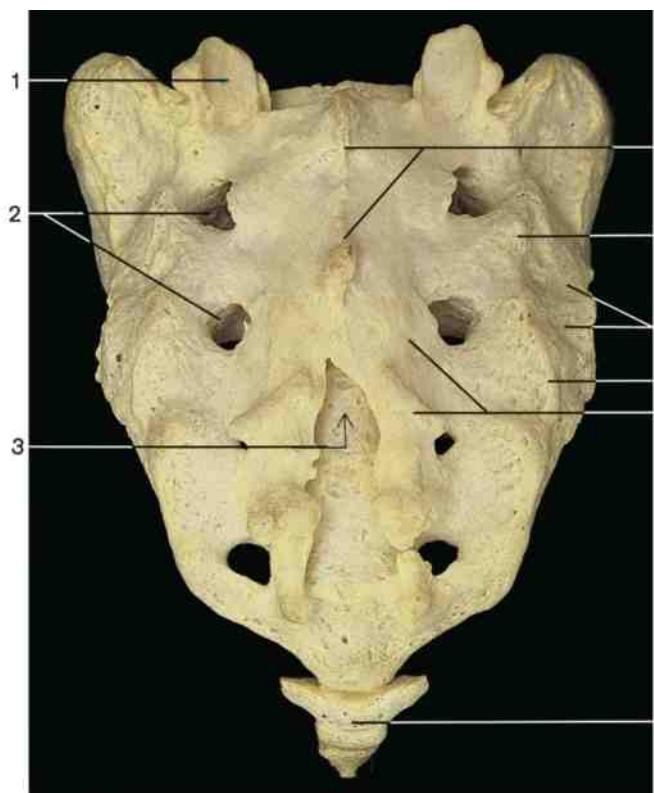

B = ischium

C = pubis

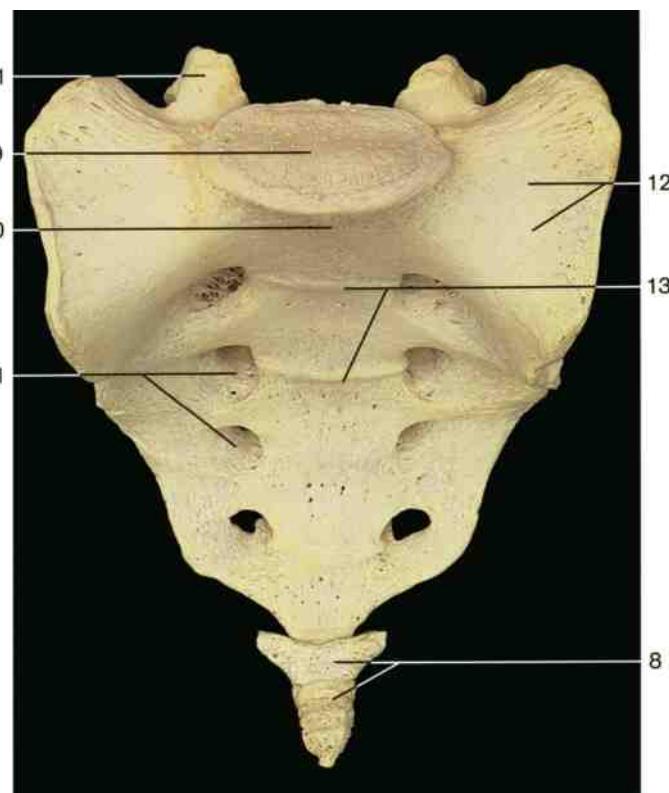

- 1 Posterior superior iliac spine
 - 2 Posterior gluteal line
 - 3 Posterior inferior iliac spine
 - 4 Greater sciatic notch
 - 5 Ischial spine
 - 6 Lesser sciatic notch
 - 7 Body of ischium
 - 8 Ischial tuberosity
 - 9 Obturator foramen
 - 10 Iliac crest
 - 11 Anterior gluteal line
 - 12 Internal lip of iliac crest
 - 13 External lip of iliac crest
 - 14 Anterior superior iliac spine
 - 15 Inferior gluteal line
 - 16 Anterior inferior iliac spine
 - 17 Lunate surface of acetabulum
 - 18 Acetabular fossa
 - 19 Acetabular notch
 - 20 Pecten pubis
 - 21 Pubic tubercle
 - 22 Body of pubis
 - 23 Iliac fossa
 - 24 Arcuate line
 - 25 Iliopubic eminence
 - 26 Symphysial surface of pubis
 - 27 Auricular surface
 - 28 Pelvic surface of sacrum
 - 29 Superior articular process of sacrum
 - 30 Dorsal sacral foramina
 - 31 Sacral tuberosity
 - 32 Lateral sacral crest
 - 33 Median sacral crest
 - 34 Obturator groove
 - 35 Coccyx

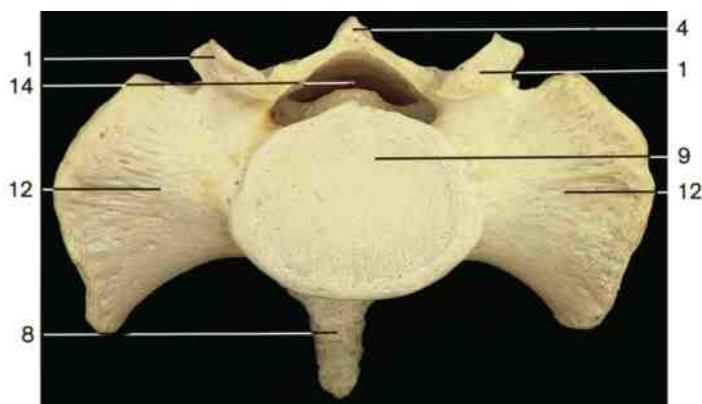

Sacrum and coccyx (lateral aspect).

Sacrum (posterior aspect).

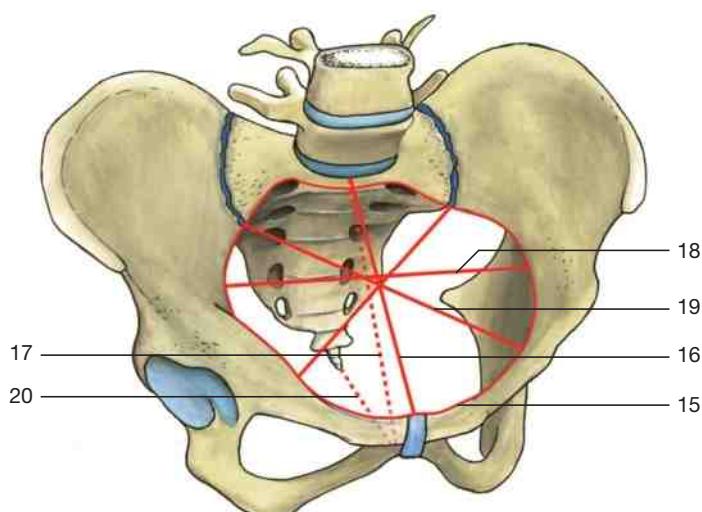

Sacrum (anterior aspect).

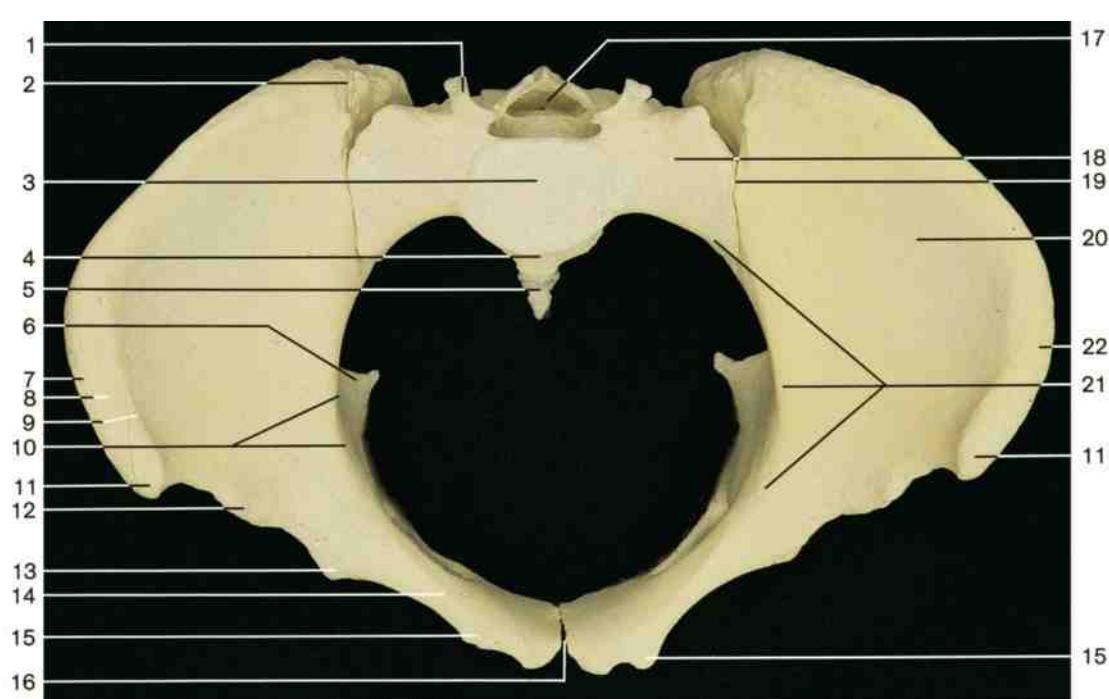

Sacrum (superior aspect).

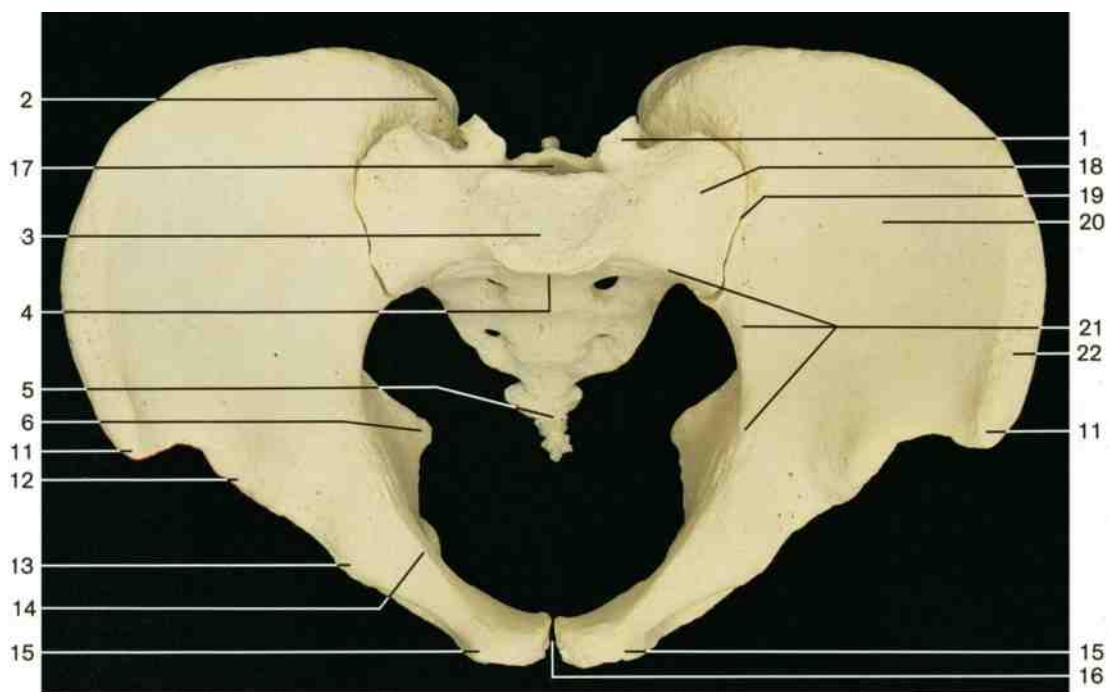

- 1 Superior articular process of sacrum
- 2 Dorsal sacral foramina
- 3 Sacral hiatus
- 4 Median sacral crest
- 5 Lateral sacral crest
- 6 Sacral tuberosity
- 7 Intermediate sacral crest
- 8 Coccyx
- 9 Base of sacrum
- 10 Sacral promontory
- 11 Anterior sacral foramina
- 12 Lateral part of sacrum (ala)
- 13 Transverse line of sacrum
- 14 Sacral canal
- 15 Linea terminalis
- 16 True conjugate
- 17 Diagonal conjugate
- 18 Transverse diameter
- 19 Oblique diameter
- 20 Inferior pelvic aperture or outlet

Diameters of pelvis (oblique superior aspect).
(Schematic drawing.)

The pelvic girdle is firmly connected to the vertebral column at the sacro-iliac joint. Therefore, the body can be kept upright more easily even if only one limb is used for support (as in walking). The mobility of the lower limb is more limited than that of the upper limb.

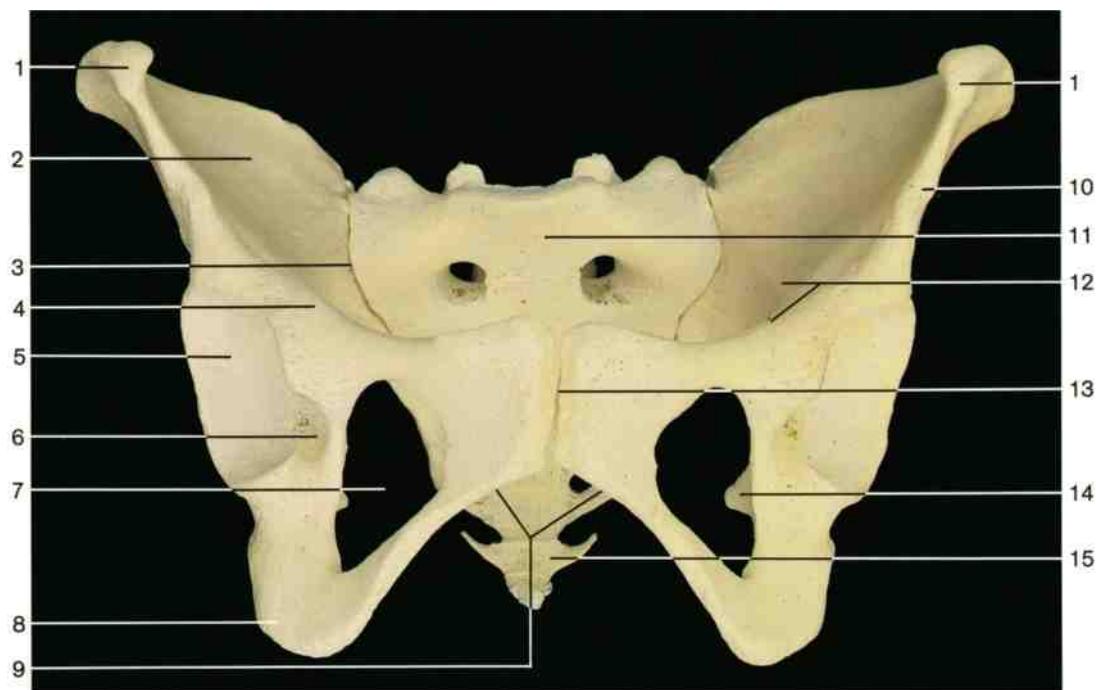

Female pelvis (superior aspect). Note the differences between the male and female pelvis, predominantly in the form and dimensions of the sacrum, the superior and inferior apertures, and the alae of the ilium.

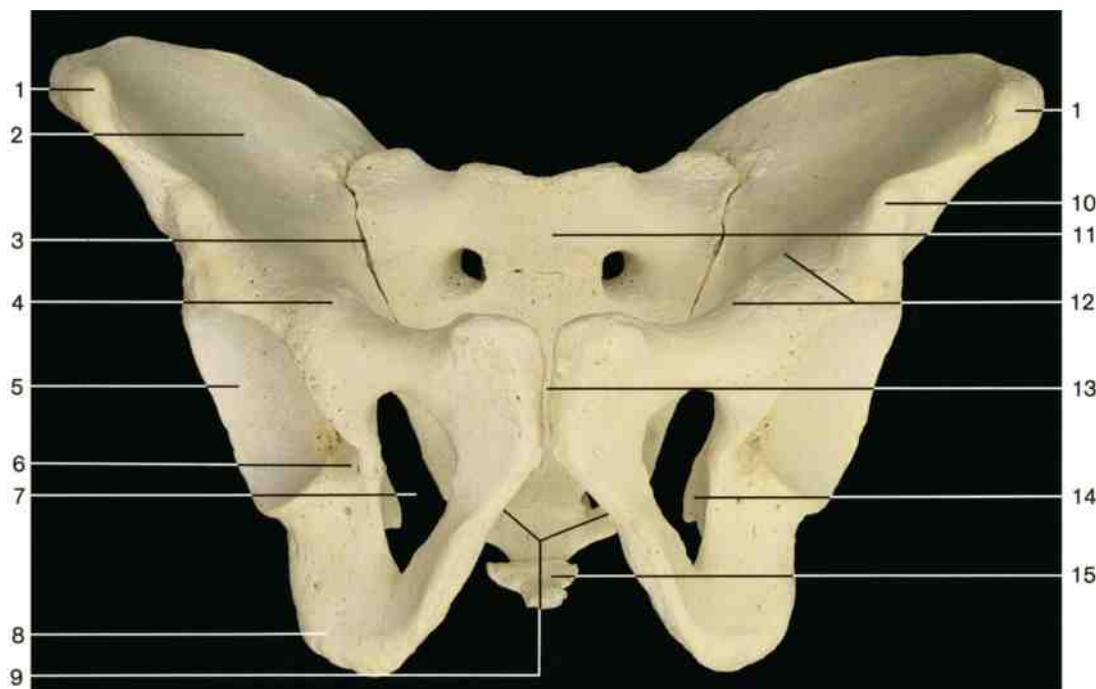

Male pelvis (superior aspect). Compare with the female pelvis (depicted above).

- | | |
|--|----------------------------------|
| 1 Superior articular process of sacrum | 12 Anterior inferior iliac spine |
| 2 Posterior superior iliac spine | 13 Iliopubic eminence |
| 3 Base of sacrum | 14 Pecten pubis |
| 4 Sacral promontory | 15 Pubic tubercle |
| 5 Coccyx | 16 Pubic symphysis |
| 6 Ischial spine | 17 Sacral canal |
| 7 External lip | 18 Ala of sacrum |
| 8 Intermediate line } of iliac crest | 19 Position of sacro-iliac joint |
| 9 Internal lip | 20 Iliac fossa |
| 10 Arcuate line | 21 Linea terminalis |
| 11 Anterior superior iliac spine | 22 Iliac crest |

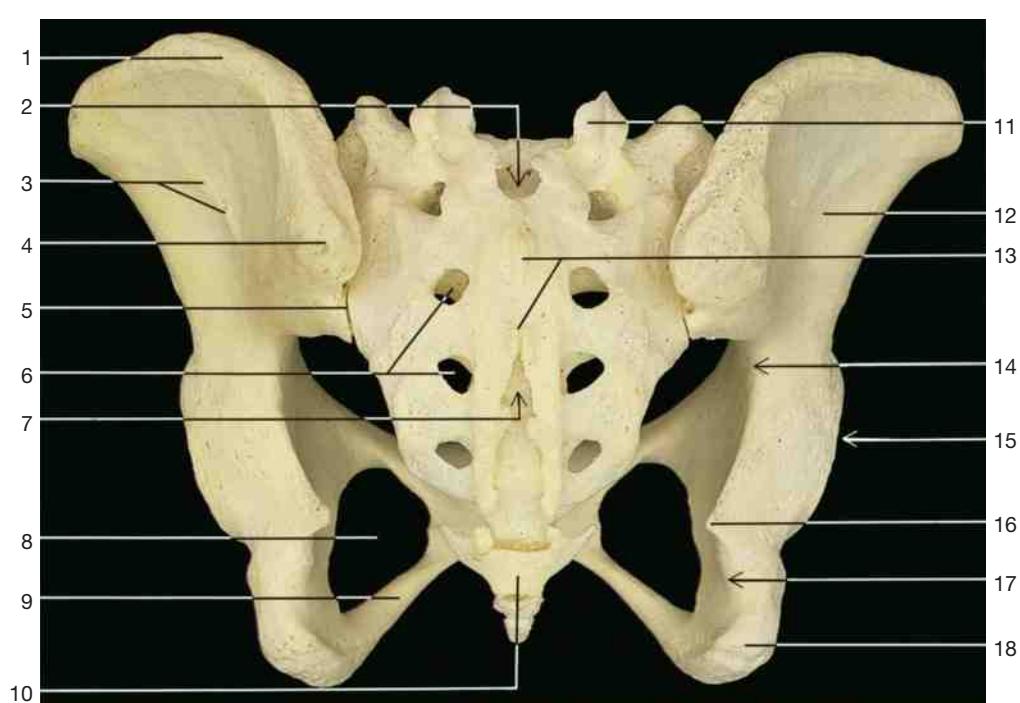

Female pelvis (anterior aspect). Note the differences between the form and dimensions of the male and female pelvis. The female pubic arch is wider than the male. The obturator foramen in the female pelvis is triangular, while that in the male pelvis is ovoid.

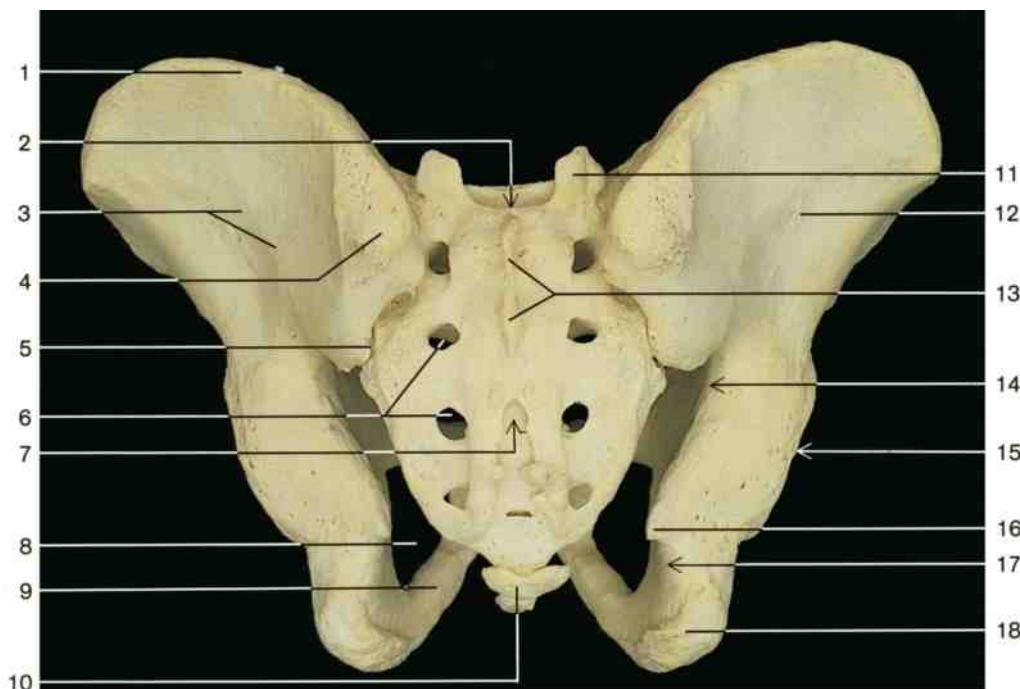

Male pelvis (anterior aspect). Compare with the female pelvis (depicted above).

- | | |
|---------------------------------|--|
| 1 Anterior superior iliac spine | 9 Pubic arch |
| 2 Iliac fossa | 10 Anterior inferior iliac spine |
| 3 Position of sacro-iliac joint | 11 Sacrum |
| 4 Iliopubic eminence | 12 Linea terminalis (at margin of superior aperture) |
| 5 Lunate surface of acetabulum | 13 Pubic symphysis |
| 6 Acetabular notch | 14 Ischial spine |
| 7 Obturator foramen | 15 Coccyx |
| 8 Ischial tuberosity | |

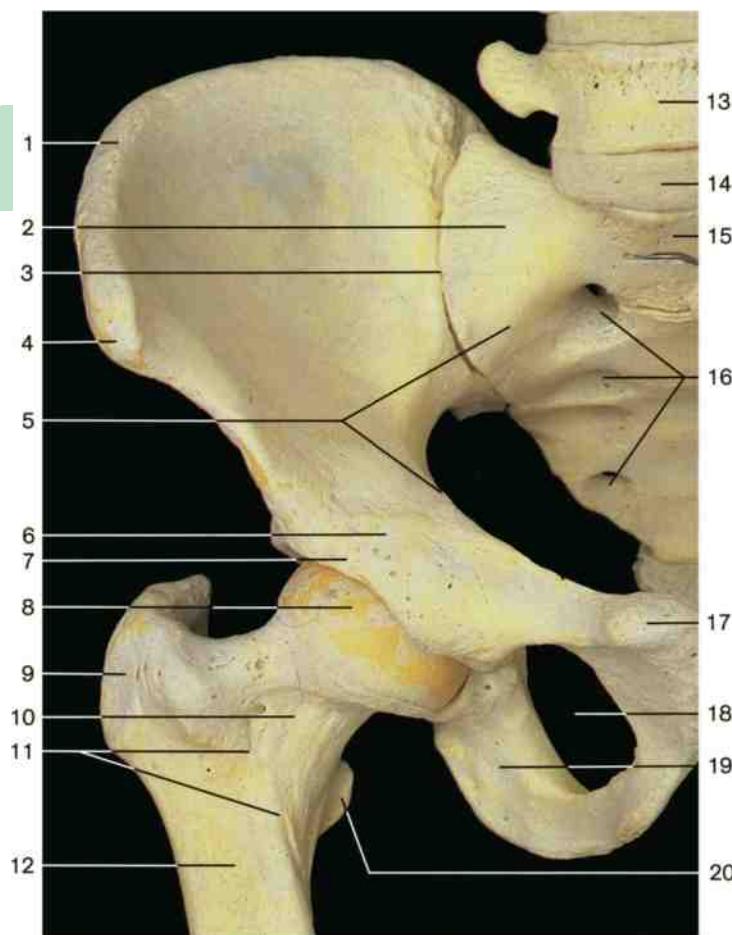

Female pelvis (posterior aspect). Note the differences between the female and male pelvis, especially with respect to the inferior aperture, the shape of the sacrum, the two sciatic notches, and the pubic arch.

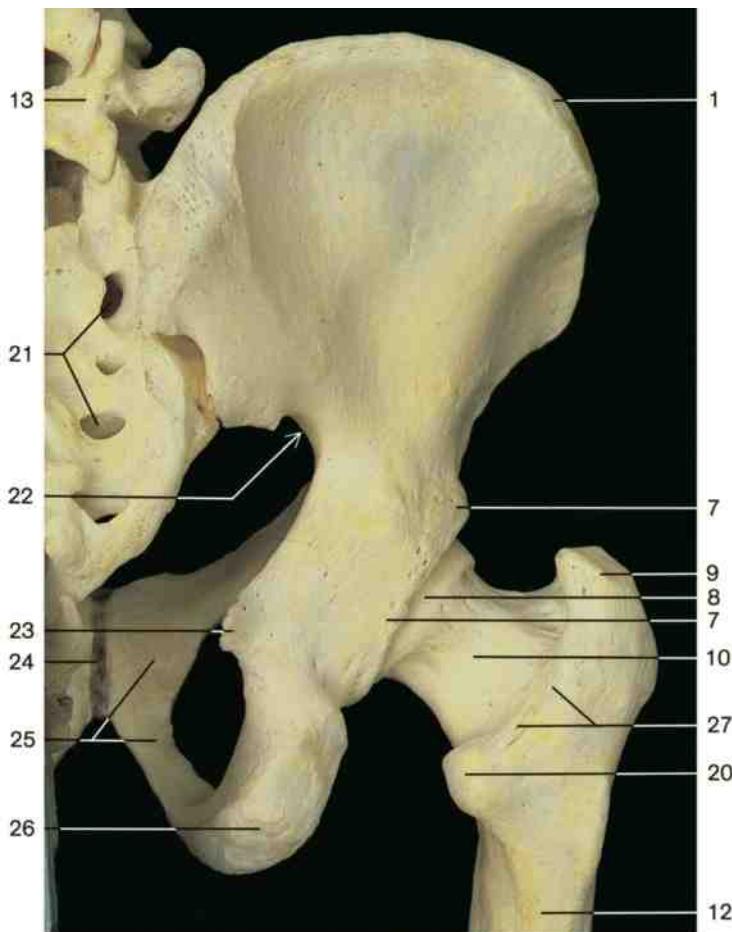

Male pelvis (posterior aspect). Compare with the female pelvis (depicted above).

- | | |

- 21 Extensor hallucis longus muscle
- 22 Extensor digitorum longus muscle

Muscles of sole of foot, second layer (from below). The flexor digitorum brevis muscle has been divided.

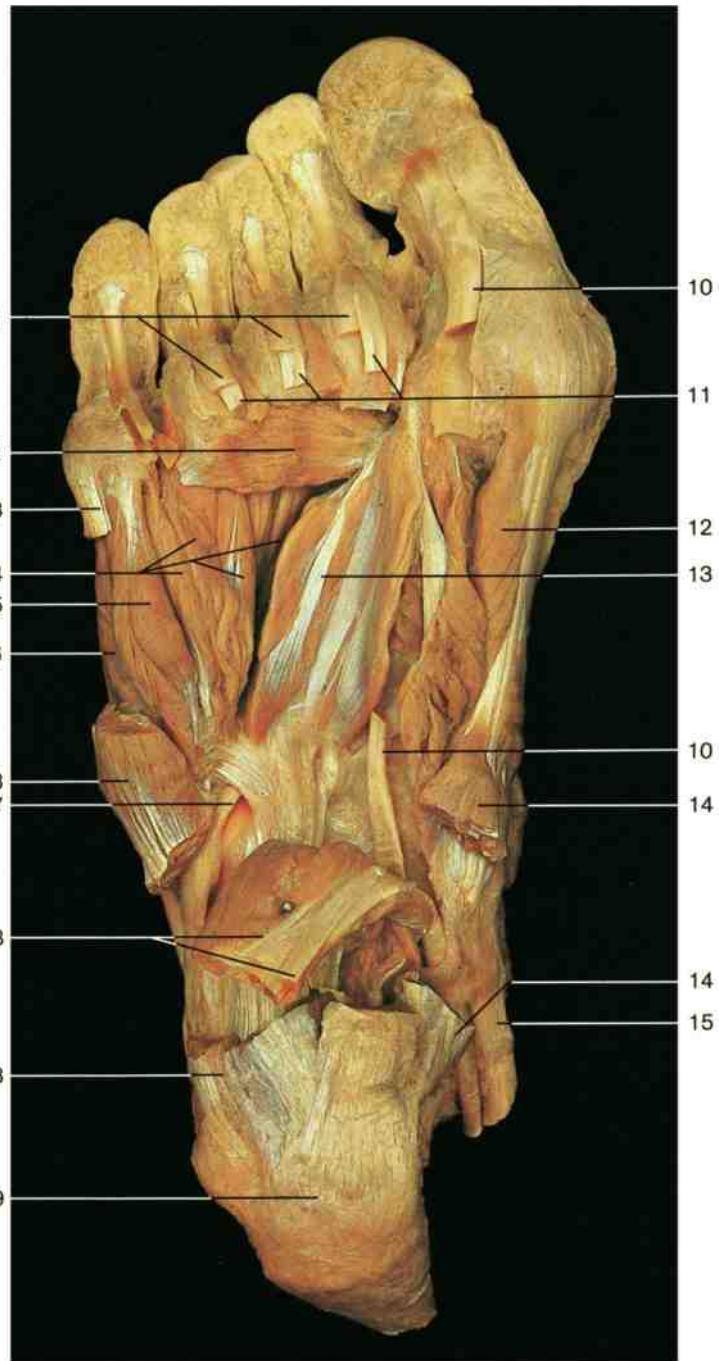

Muscles of sole of foot, second layer (from below). The tendons of the flexor muscles and the crossing of tendons are displayed. The flexor digitorum brevis muscle has been divided and reflected.

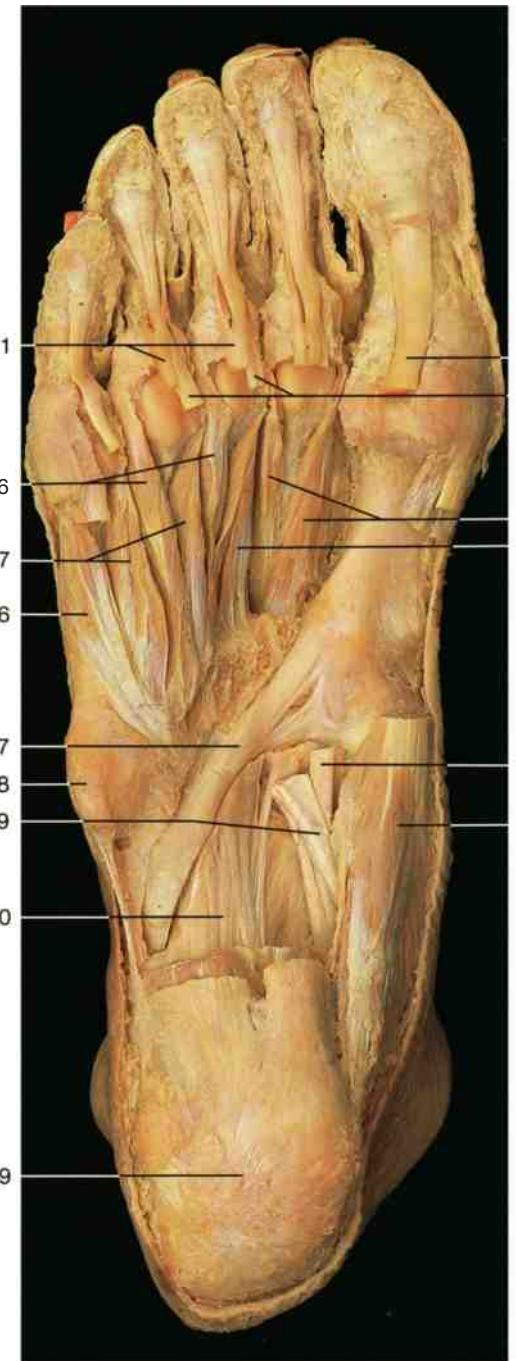

- 1 Tendons of flexor digitorum brevis muscle
- 2 Tendons of flexor digitorum longus muscle
- 3 Lumbrical muscles
- 4 Interossei muscles
- 5 Flexor digiti minimi brevis muscle

- 6 Abductor digiti minimi muscle
- 7 Quadratus plantae muscle
- 8 Calcaneal tuberosity
- 9 Tendon of flexor hallucis longus muscle
- 10 Flexor hallucis brevis muscle
- 11 Abductor hallucis muscle
- 12 Flexor digitorum brevis muscle (divided)

- 13 Tuberosity of fifth metatarsal bone
- 14 Tendon of peroneus longus muscle
- 15 Transverse head of adductor hallucis muscle
- 16 Crossing of tendons in sole of foot
- 17 Medial malleolus
- 18 Plantar aponeurosis (divided)

Muscles of sole of foot, third layer (from below). The flexor digitorum brevis muscle has been removed, and the quadratus plantae, abductor hallucis, and digiti minimi muscles have been divided.

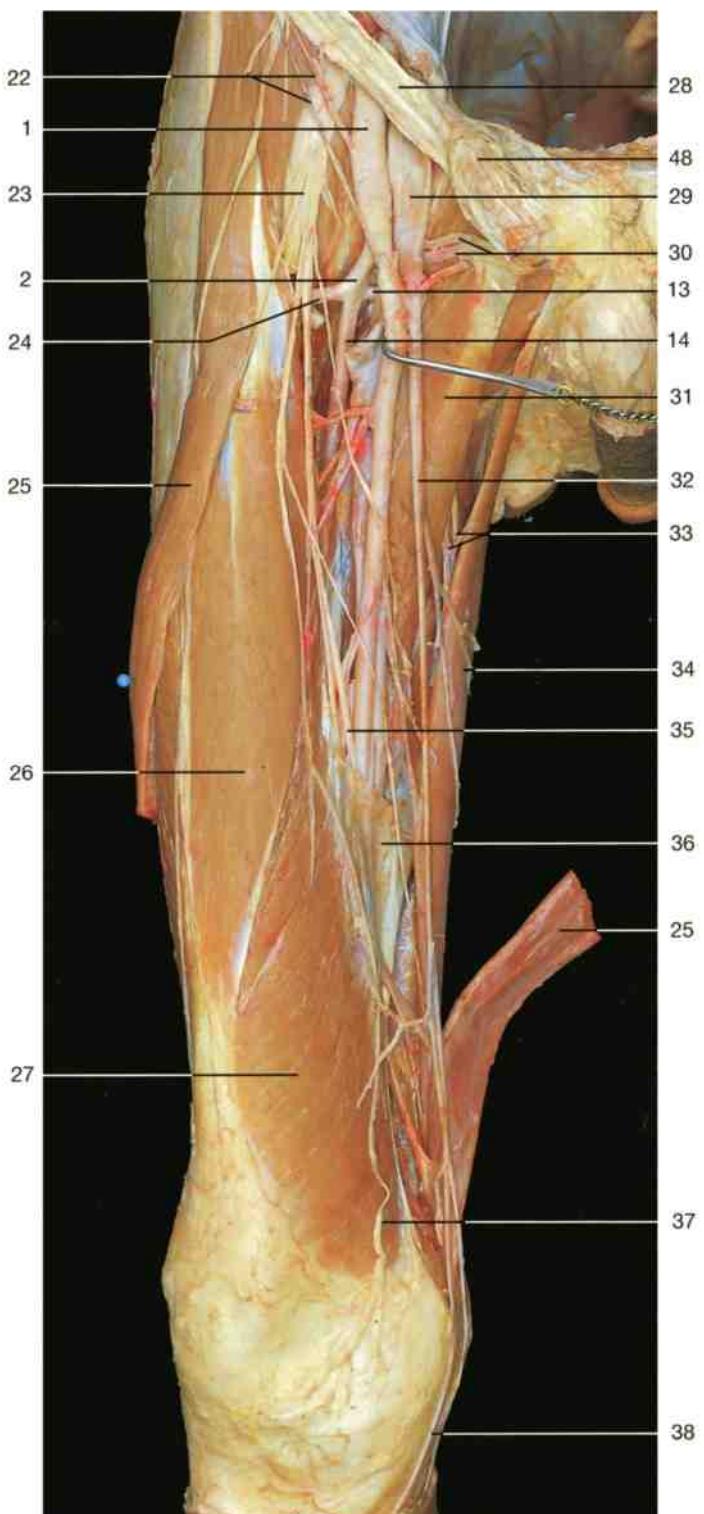

Muscles of sole of foot, fourth layer (from below). The interosseous muscles and the canal for the tendon of peroneus longus muscle are shown.

- 1 Tendons of flexor digitorum brevis muscle
- 2 Transverse head of adductor hallucis muscle
- 3 Abductor digiti minimi muscle
- 4 Interossei muscles
- 5 Flexor digiti minimi brevis muscle
- 6 Opponens digiti minimi muscle
- 7 Tendon of peroneus longus muscle

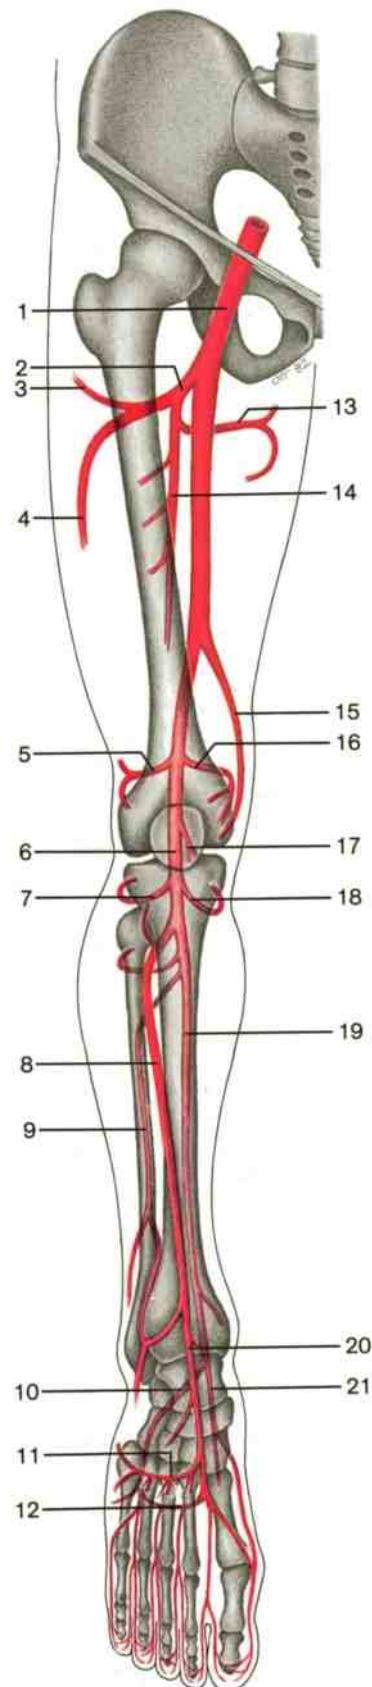

- 8 Quadratus plantae muscle with tendon of flexor digitorum longus muscle
- 9 Calcaneal tuberosity
- 10 Tendons of flexor hallucis longus muscle (divided)
- 11 Tendon of flexor digitorum longus muscle
- 12 Flexor hallucis brevis muscle
- 13 Oblique head of adductor hallucis muscle
- 14 Abductor hallucis muscle (cut)

- 15 Tendon of tibialis posterior muscle
- 16 Dorsal interossei muscles
- 17 Plantar interossei muscles
- 18 Tuberosity of fifth metatarsal bone
- 19 Tendon of flexor digitorum longus muscle (crossing of plantar tendons)
- 20 Long plantar ligament

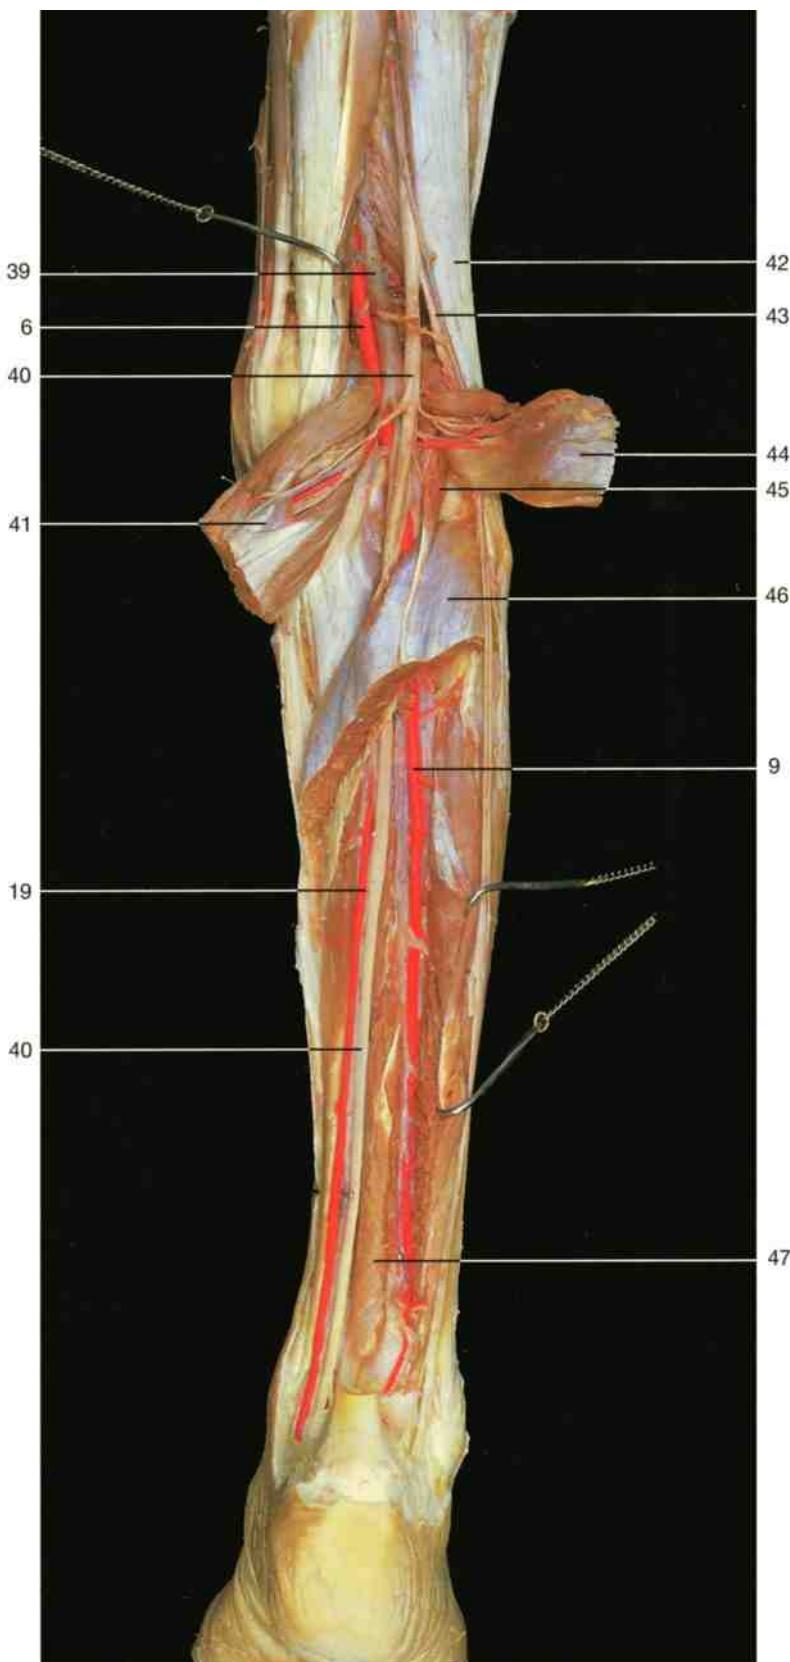

Main arteries and nerves of right thigh (anterior aspect).

Sartorius muscle has been divided and reflected. The femoral vein has been partly removed to show the deep femoral artery.
Notice: the vessels enter the adductor canal to reach the popliteal fossa.

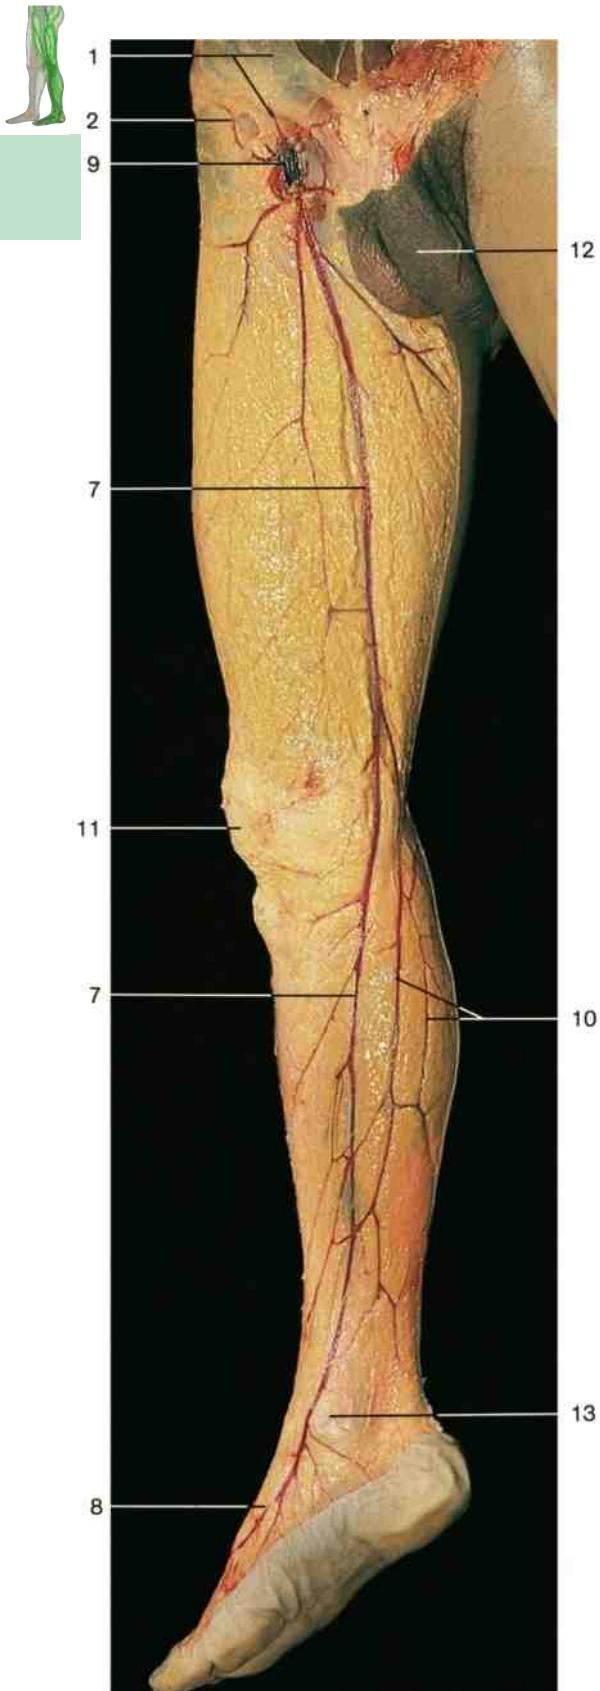

Main arteries of lower limb, right side
(anterior aspect, schematic drawing).

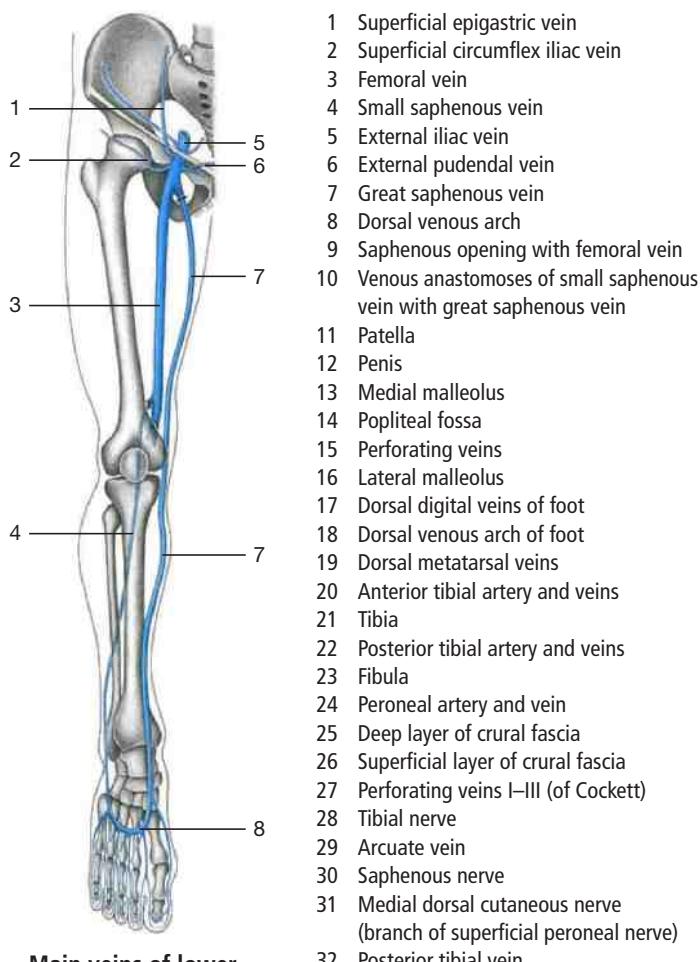

- 1 Femoral artery
- 2 Profunda femoris artery
- 3 Ascending branch of lateral circumflex femoral artery
- 4 Descending branch of lateral circumflex femoral artery
- 5 Lateral superior genicular artery
- 6 Popliteal artery
- 7 Lateral inferior genicular artery
- 8 Anterior tibial artery
- 9 Peroneal artery
- 10 Lateral plantar artery
- 11 Arcuate artery with dorsal metatarsal arteries
- 12 Plantar arch with plantar metatarsal arteries
- 13 Medial circumflex femoral artery
- 14 Profunda femoris artery with perforating arteries
- 15 Descending genicular artery
- 16 Medial superior genicular artery
- 17 Middle genicular artery
- 18 Medial inferior genicular artery
- 19 Posterior tibial artery
- 20 Dorsalis pedis artery
- 21 Medial plantar artery
- 22 Superficial and deep circumflex iliac arteries
- 23 Femoral nerve
- 24 Lateral circumflex femoral artery
- 25 Sartorius muscle (cut and reflected)
- 26 Rectus femoris muscle
- 27 Vastus medialis muscle
- 28 Inguinal ligament
- 29 Femoral vein (cut)
- 30 External pudendal artery and vein
- 31 Adductor longus muscle
- 32 Great saphenous vein
- 33 Obturator artery and nerve
- 34 Gracilis muscle
- 35 Saphenous nerve
- 36 Tendinous wall of adductor canal
- 37 Anterior cutaneous branch of femoral nerve
- 38 Infrapatellar branch of saphenous nerve
- 39 Popliteal vein
- 40 Tibial nerve
- 41 Medial head of gastrocnemius muscle
- 42 Biceps femoris muscle
- 43 Common peroneal nerve
- 44 Lateral head of gastrocnemius muscle
- 45 Plantaris muscle
- 46 Soleus muscle
- 47 Flexor hallucis longus muscle
- 48 Spermatic cord

Arteries of the right leg (posterior aspect).

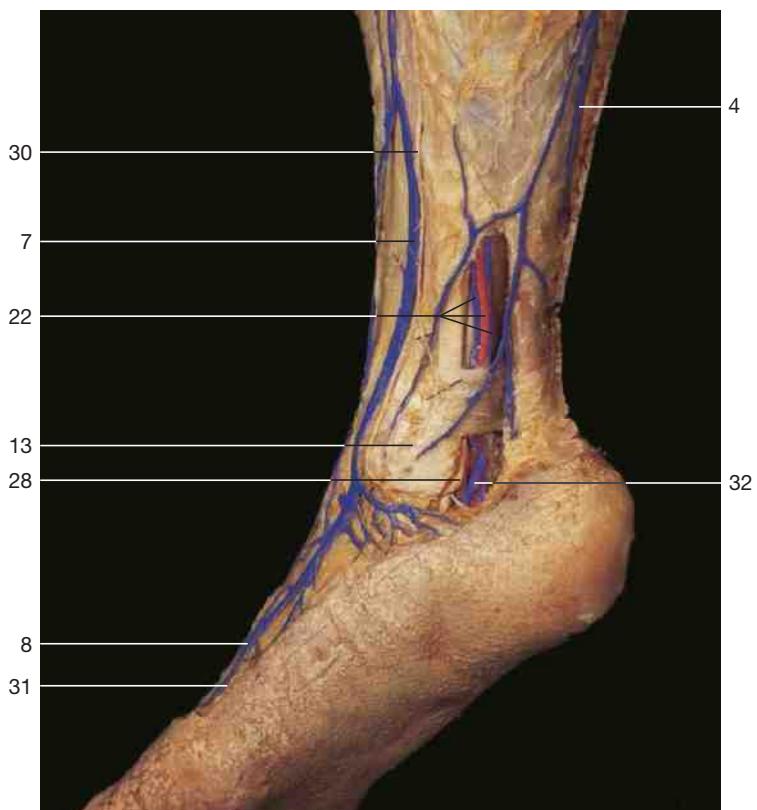

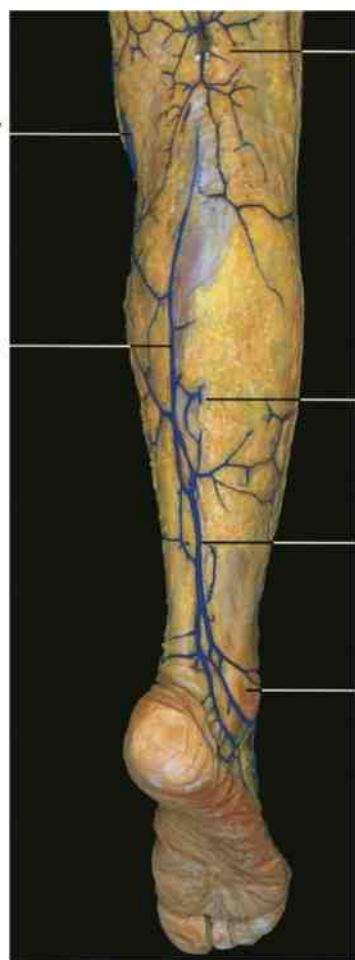

Superficial veins of lower limb, right side (medio-anterior aspect). The veins have been injected with red solution.

Medial malleolar region. Dissection of tibial nerve, posterior tibial vessels, and great sphenous vein (veins injected with blue resin).

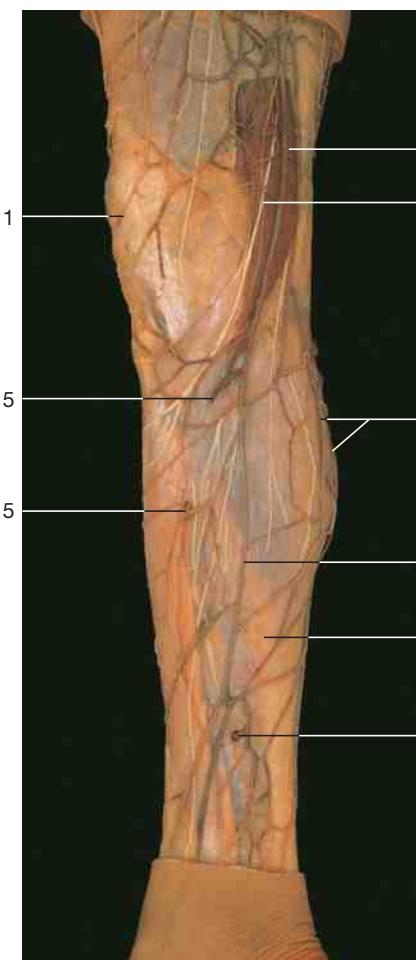

Main veins of lower limb, right side
(anterior aspect,
schematic drawing).

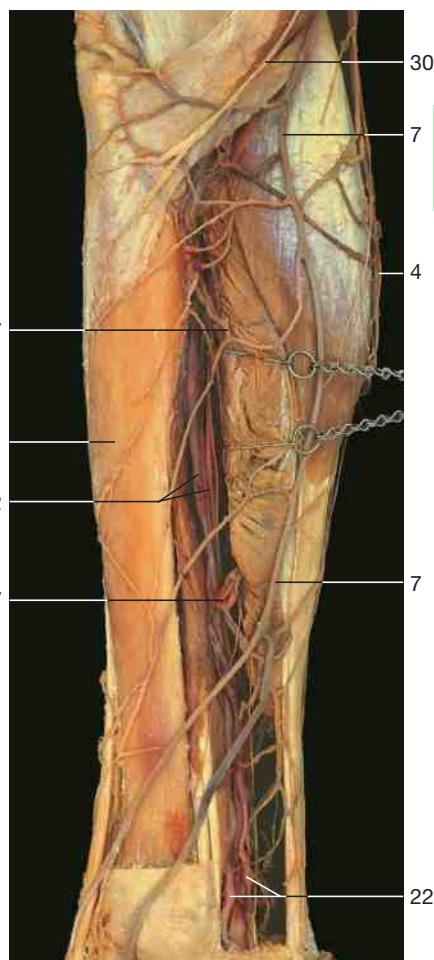

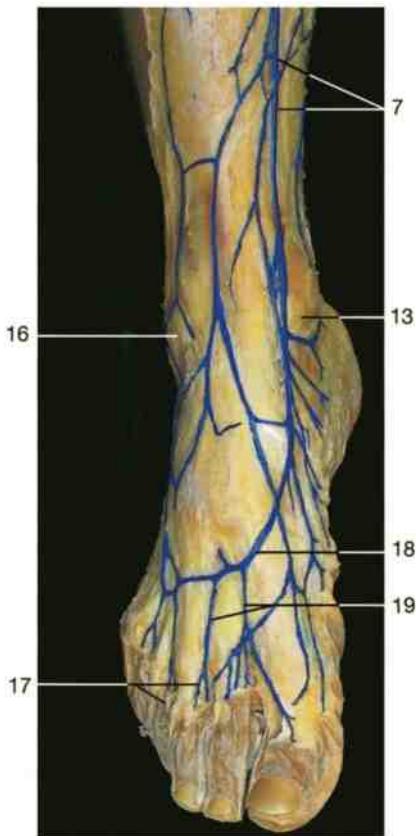

Superficial veins of leg (posterior aspect; veins injected with blue resin).

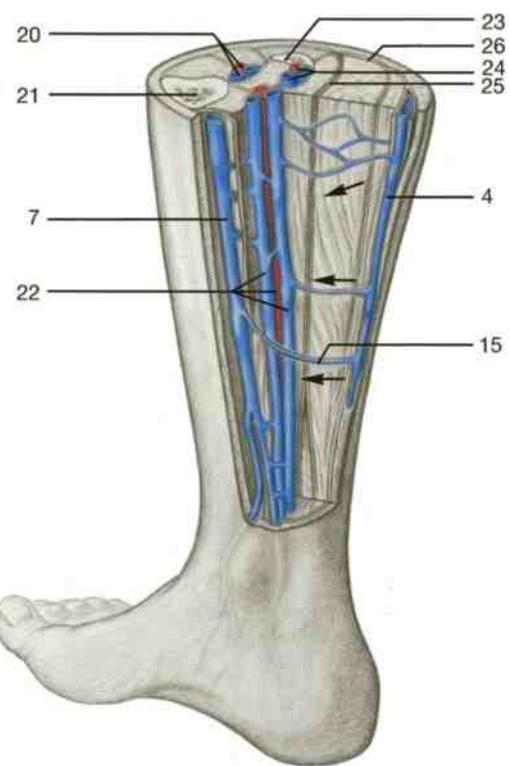

Superficial veins of leg. The perforating veins of Cockett have been dissected (left side, medial aspect).

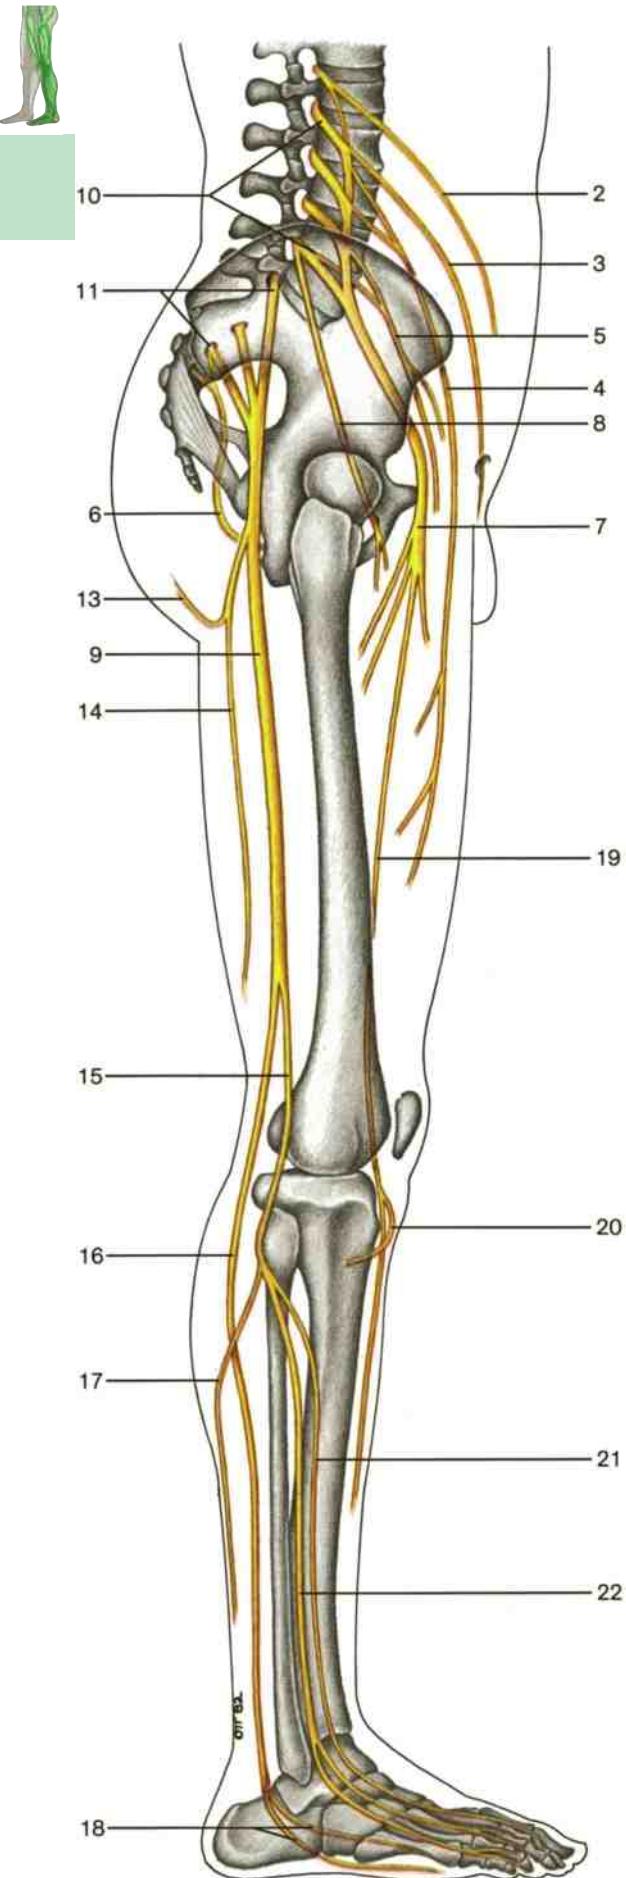

Veins of leg. The anastomoses between superficial and deeper veins are dissected (left side, medial aspect).

Anastomoses between superficial and deep veins of the leg (schematic drawing, after Aigner). Arrows: directions of blood flow.

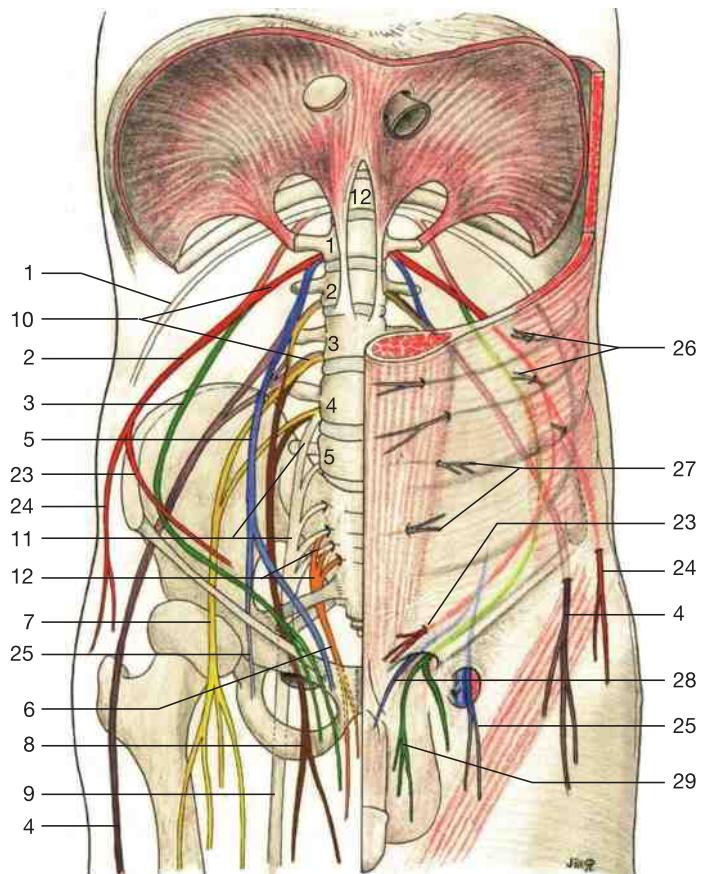

Superficial veins on dorsum of foot (veins injected with blue resin).

Nerves of lower limb, right side (lateral aspect).
(Schematic drawing.)

- 1 Subcostal nerve
- 2 Iliohypogastric nerve
- 3 Ilio-inguinal nerve
- 4 Lateral femoral cutaneous nerve

- 19 Sacrum
- 20 Lumbosacral trunk
- 21 Sacral plexus
- 22 Coccyx
- 23 Sacrospinous ligament
- 24 Pudendal nerve
- 25 Inferior rectal nerves
- 26 Perineal nerves
- 27 Subcutaneous fat tissue of gluteal region

Lumbosacral plexus in situ, right side (medial aspect).

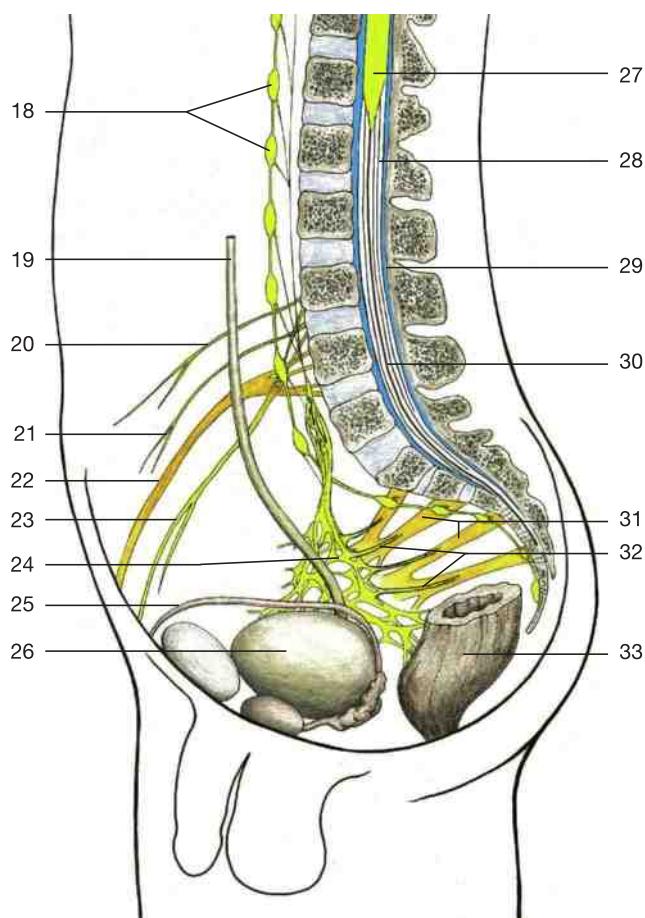

Pelvic organs with peritoneum and part of the levator ani muscle have been removed.

Lumbar part of vertebral column with pelvis
(sagittal section, medial aspect).

- 1 Eleventh rib
- 2 Body of third lumbar vertebra
- 3 Intervertebral disc
- 4 Body of fifth lumbar vertebra
- 5 Anterior superior iliac spine
- 6 Symphysial surface
- 7 Body of twelfth thoracic vertebra
- 8 Intervertebral foramen
- 9 Body of first lumbar vertebra
- 10 Vertebral canal
- 11 Spinous process of fifth lumbar vertebra
- 12 Sacrum (median sacral crest)
- 13 Promontory (promontorium)
- 14 Sacrum
- 15 Arcuate line
- 16 Coccyx
- 17 Ischial tuberosity
- 18 Sympathetic trunk with ganglia
- 19 Ureter
- 20 Iliohypogastric nerve (Th_{12}, L_1)
- 21 Ilio-inguinal nerve (L_1)
- 22 Femoral nerve (L_2-L_4)
- 23 Genitofemoral nerve (L_1, L_2)
- 24 Inferior hypogastric plexus
- 25 Ductus deferens
- 26 Urinary bladder
- 27 Medullary cone of spinal cord
- 28 Root filaments of spinal nerves
- 29 Subarachnoid space
(filled with cerebrospinal fluid) (blue)
- 30 Terminal filament of spinal cord
- 31 Sacral plexus
- 32 Pelvic splanchnic nerves (nervi erigentes)
- 33 Rectum

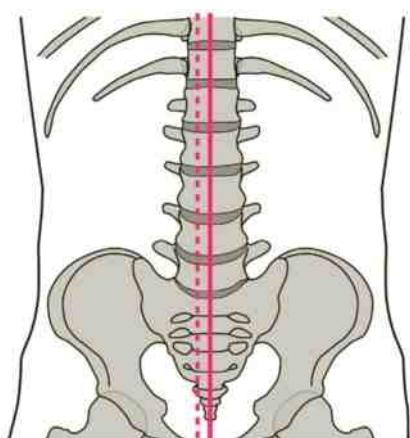

Vertebral canal with spinal cord and root filaments.
Note the high location of the medullary cone. Sacral plexus and inferior hypogastric plexus are schematically shown.

Paramedian section of lumbar part of vertebral canal (MRI scan, dotted line in the schematic drawing below; courtesy of Prof. Bautz, Erlangen, Germany).

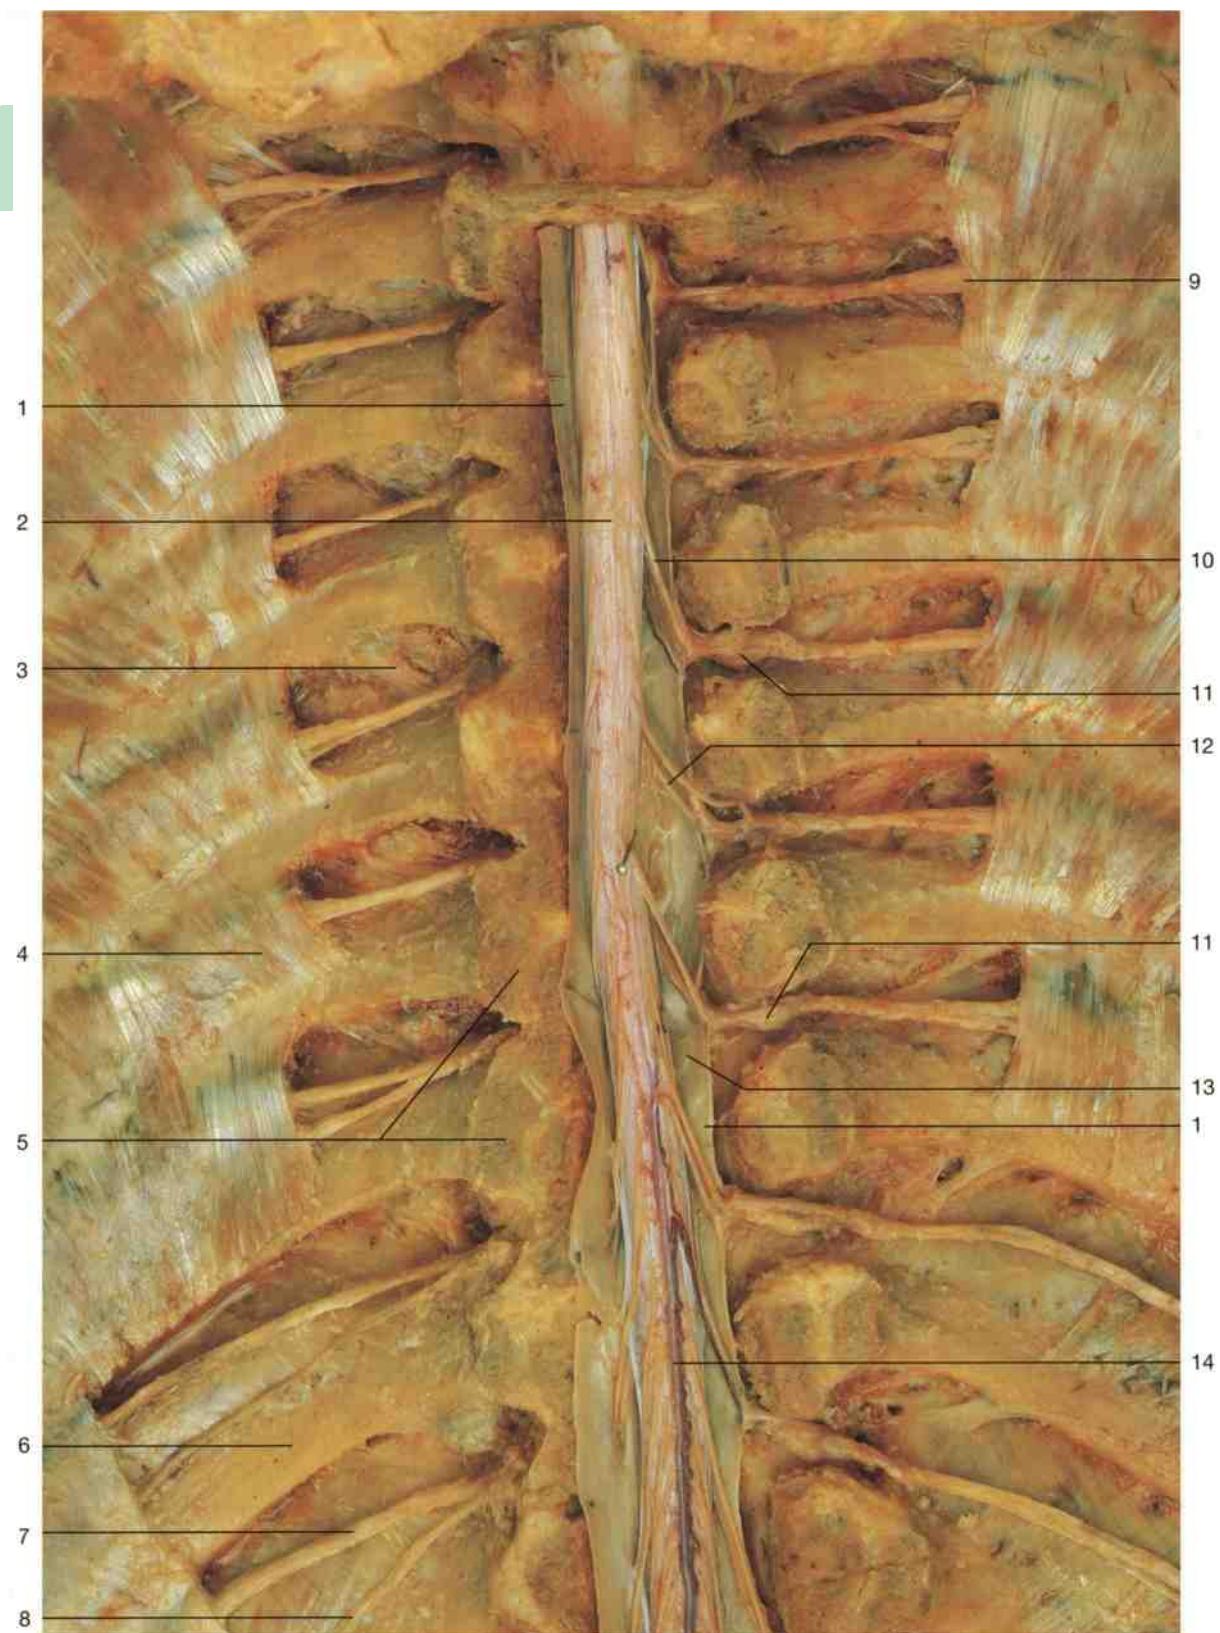

Median section of lumbar part of vertebral canal at the level of the medullary cone (MRI scan, continuous line in the schematic drawing below; courtesy of Prof. Bautz, Erlangen, Germany).

- 1 First lumbar vertebra
- 2 Root filaments of spinal nerves
- 3 Sacrum
- 4 Spinal cord
- 5 Medullary cone of spinal cord
- 6 Intervertebral disc between fourth and fifth lumbar vertebra
- 7 Fifth lumbar vertebra

Location of the sections shown above through the vertebral canal.

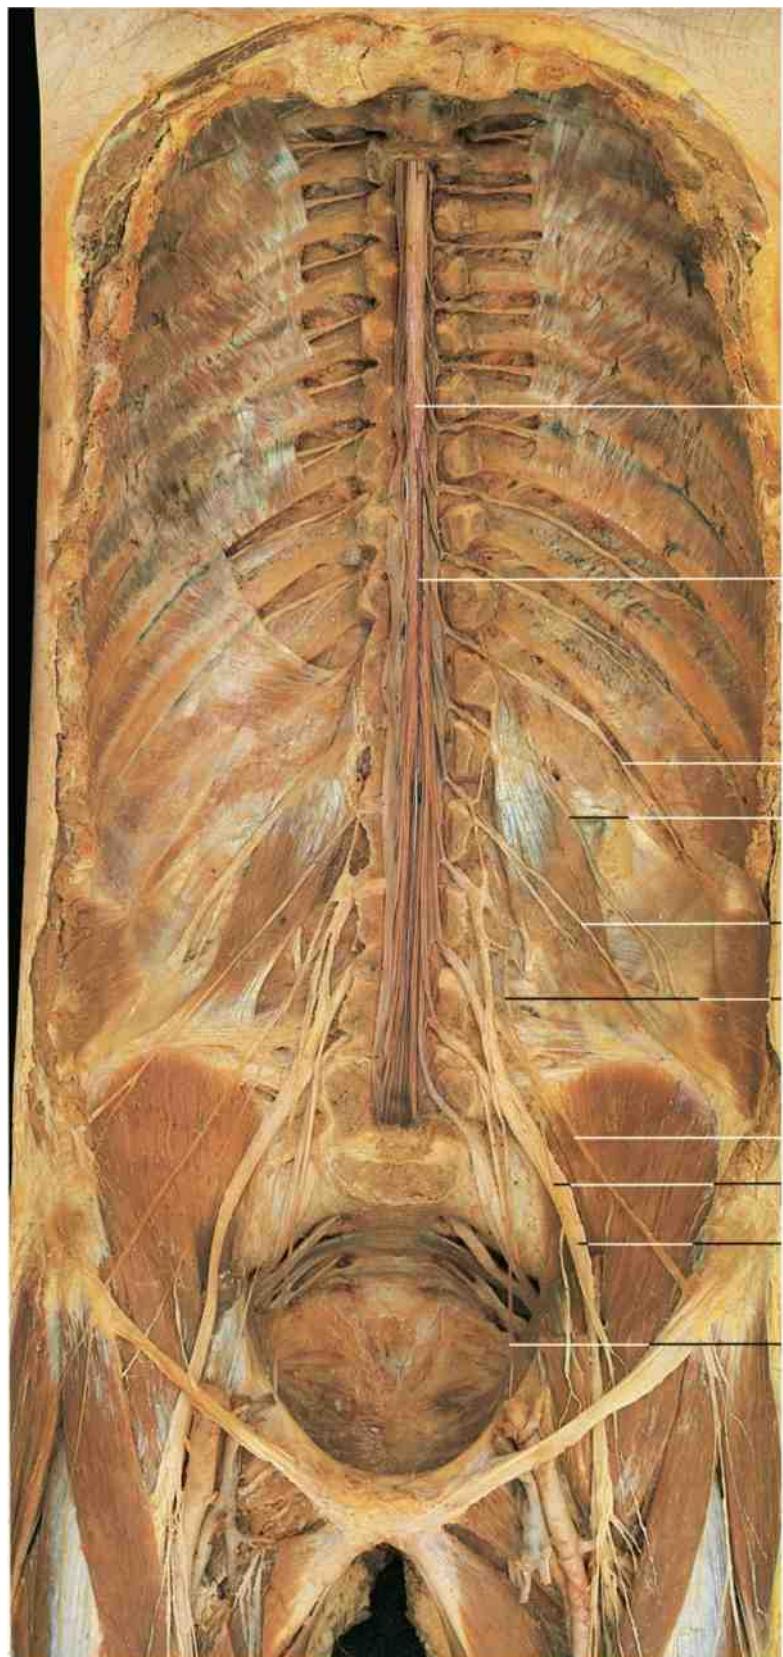

Spinal cord with intercostal nerves. Inferior thoracic region (anterior aspect). Anterior portion of thoracic vertebrae removed, dural sheath opened, and spinal cord slightly reflected to the right to display the dorsal and ventral roots.

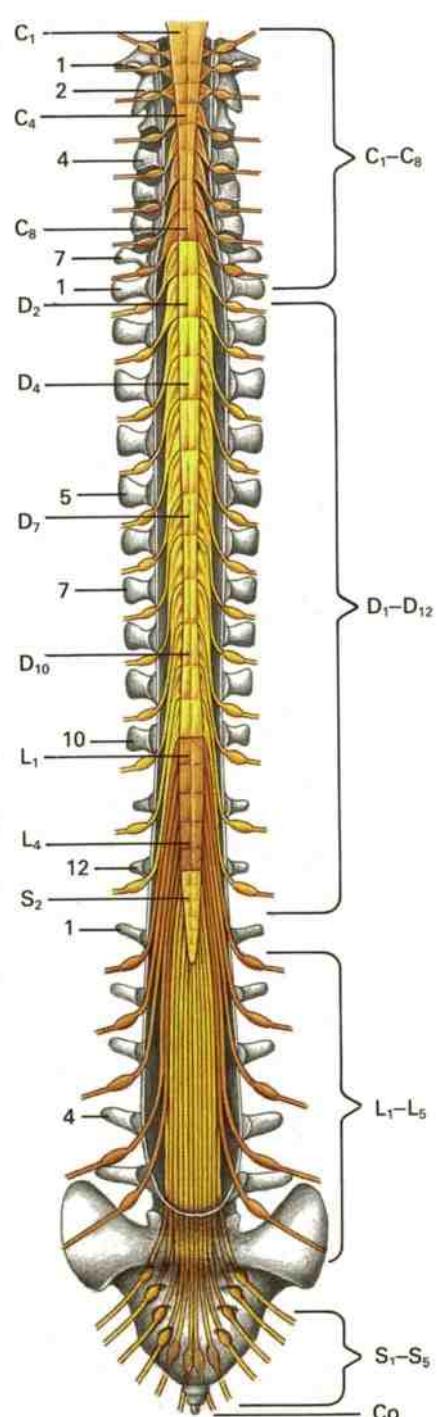

- 1 Dura mater
- 2 Spinal cord
- 3 Costotransverse ligament
- 4 Innermost intercostal muscle
- 5 Vertebral arches (cut surfaces)

- 6 Eleventh rib
- 7 Intercostal nerve
- 8 Collateral branch of intercostal nerve
- 9 Intercostal nerve (entering the intermuscular interval)

- 10 Anterior root filaments
- 11 Spinal (dorsal root) ganglion
- 12 Posterior root filaments
- 13 Arachnoid mater and denticulate ligament
- 14 Anterior spinal artery

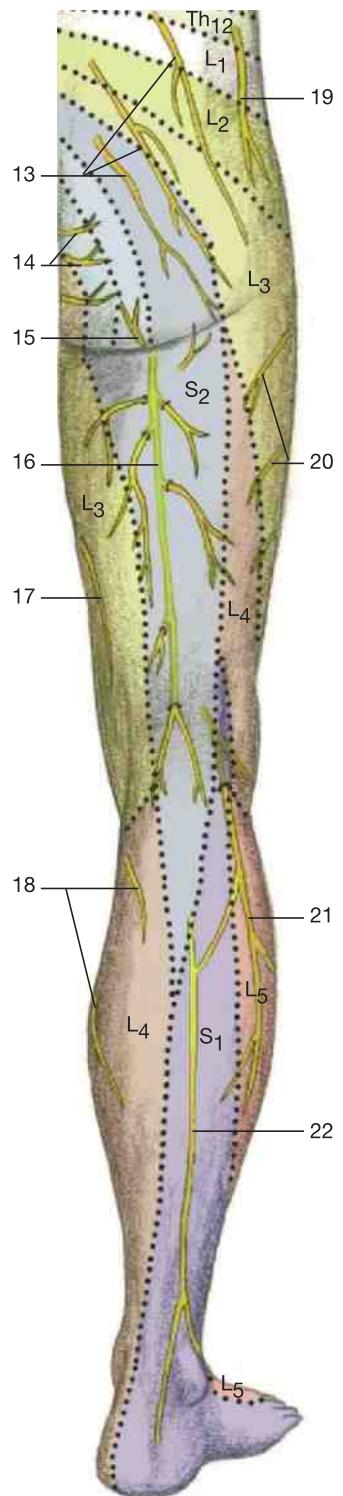

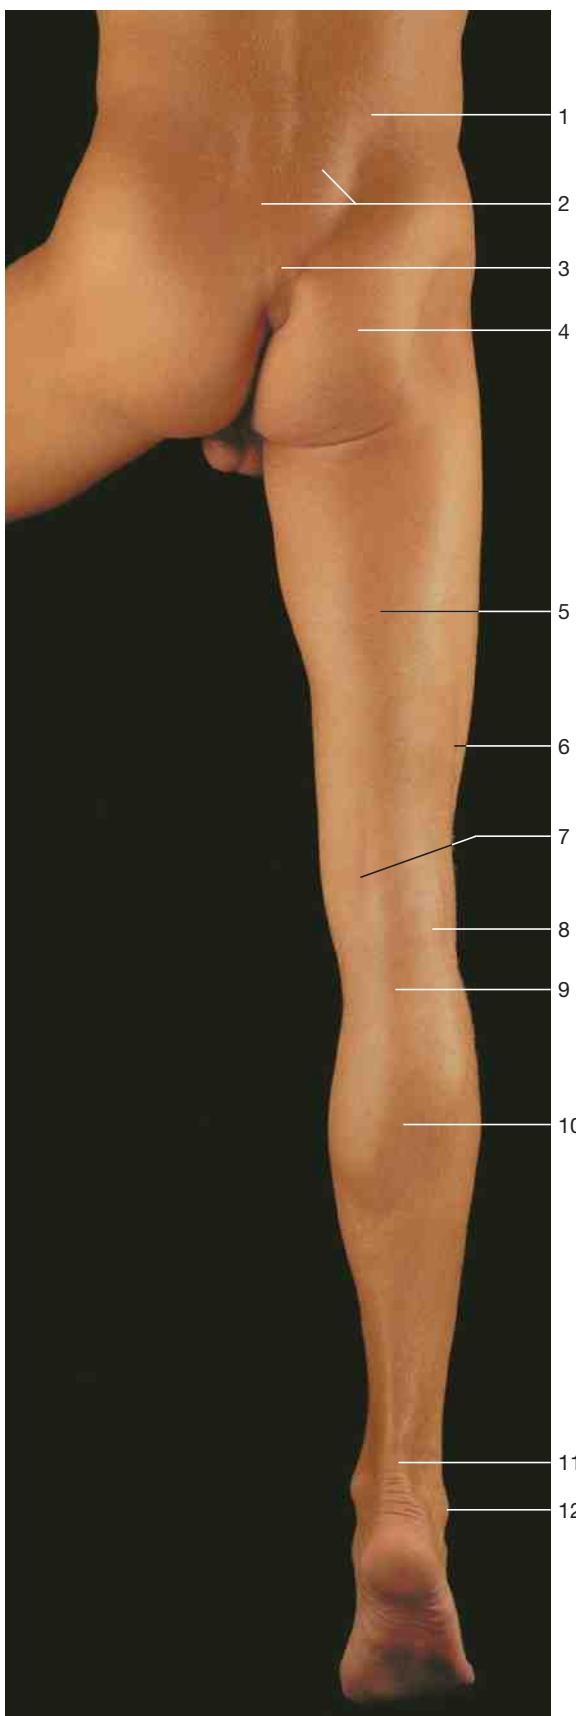

Spinal cord and lumbar plexus *in situ* (anterior aspect).

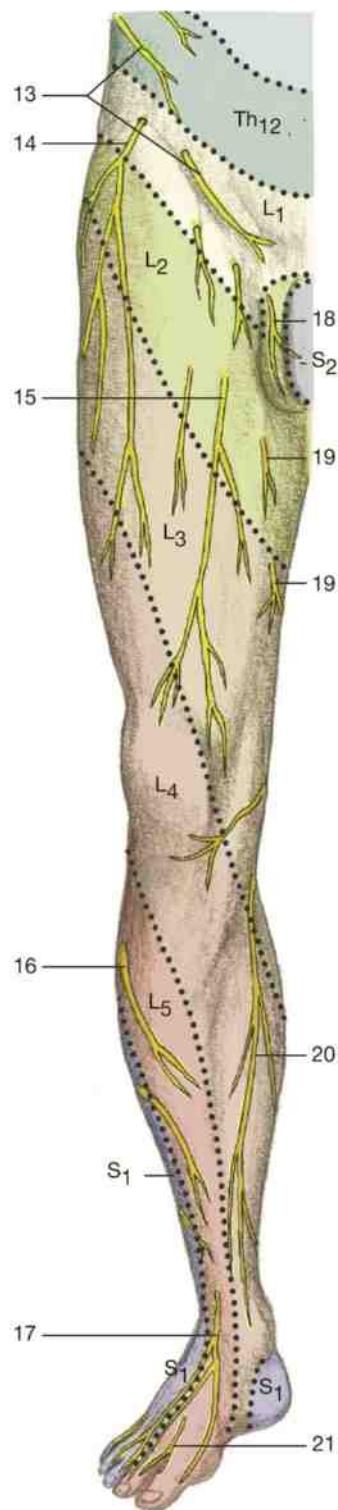

Organization of spinal cord segments in relation to the vertebral column (anterior aspect).
 C = cervical; D = thoracic;
 L = lumbar; S = sacral segments;
 Co = coccygeal bone.
 Numbers indicate the related vertebrae.

- 26 Femoral artery
- 27 Superficial epigastric vein
- 28 Femoral vein
- 29 Lateral dorsal cutaneous branch of sural nerve
- 30 Inguinal nodes (enlarged)
- 31 Lymphatic vessels
- 32 Sartorius muscle

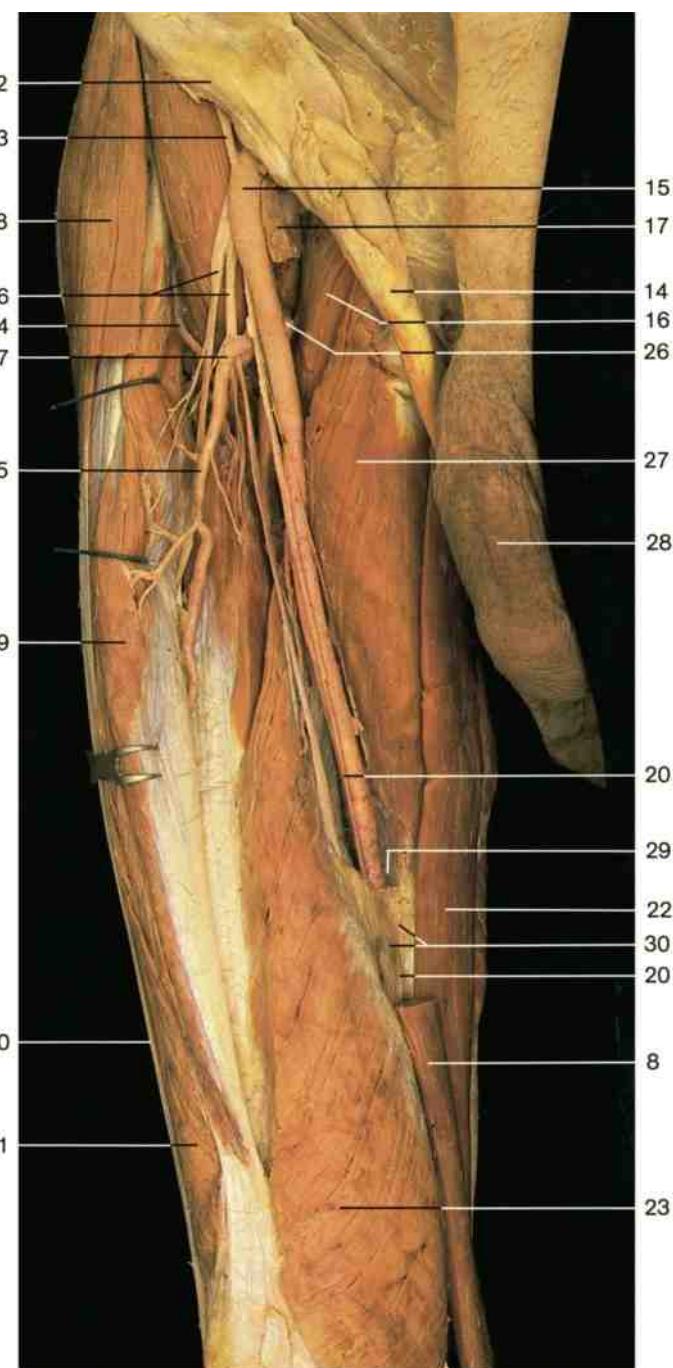

Inguinal nodes with lymphatic vessels (anterior aspect).

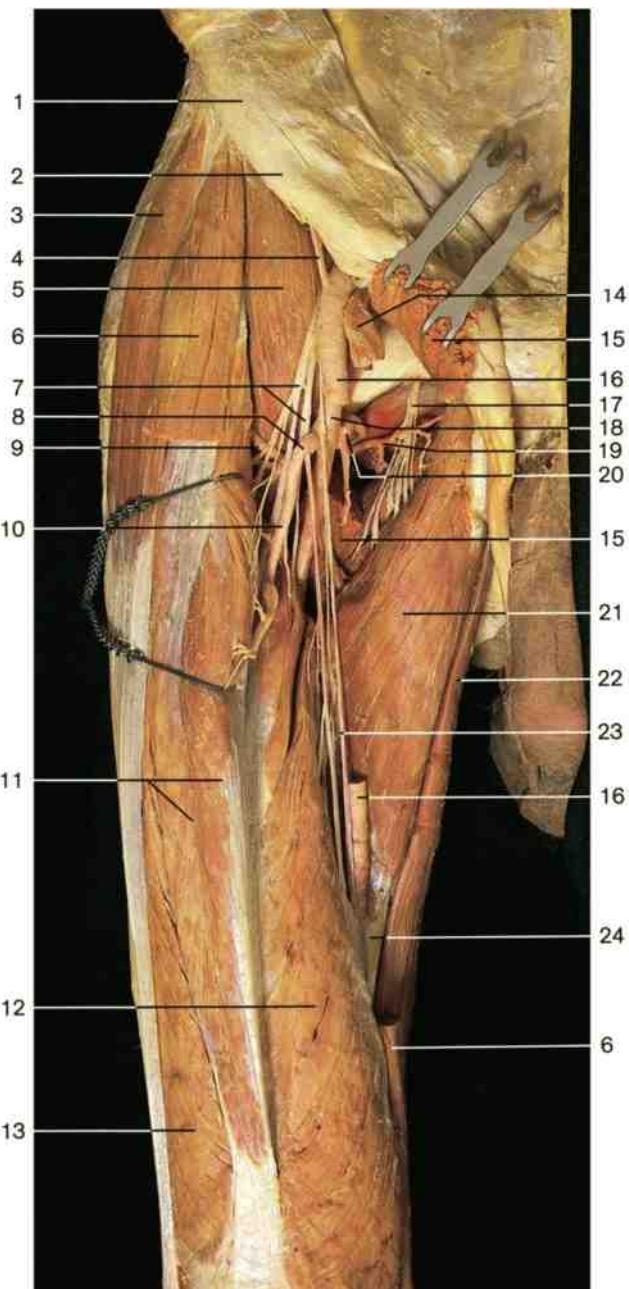

Anterior region of right thigh (anterior aspect). The fascia lata has been removed, and the sartorius muscle has been slightly reflected.

- 1 Anterior superior iliac spine
- 2 Inguinal ligament
- 3 Deep circumflex iliac artery
- 4 Iliopsoas muscle
- 5 Tensor fasciae latae muscle
- 6 Femoral nerve
- 7 Lateral circumflex femoral artery
- 8 Sartorius muscle
- 9 Rectus femoris muscle
- 10 Iliotibial tract
- 11 Vastus lateralis muscle
- 12 Anterior sheath of rectus abdominis muscle
- 13 Inferior epigastric artery
- 14 Spermatic cord
- 15 Femoral artery

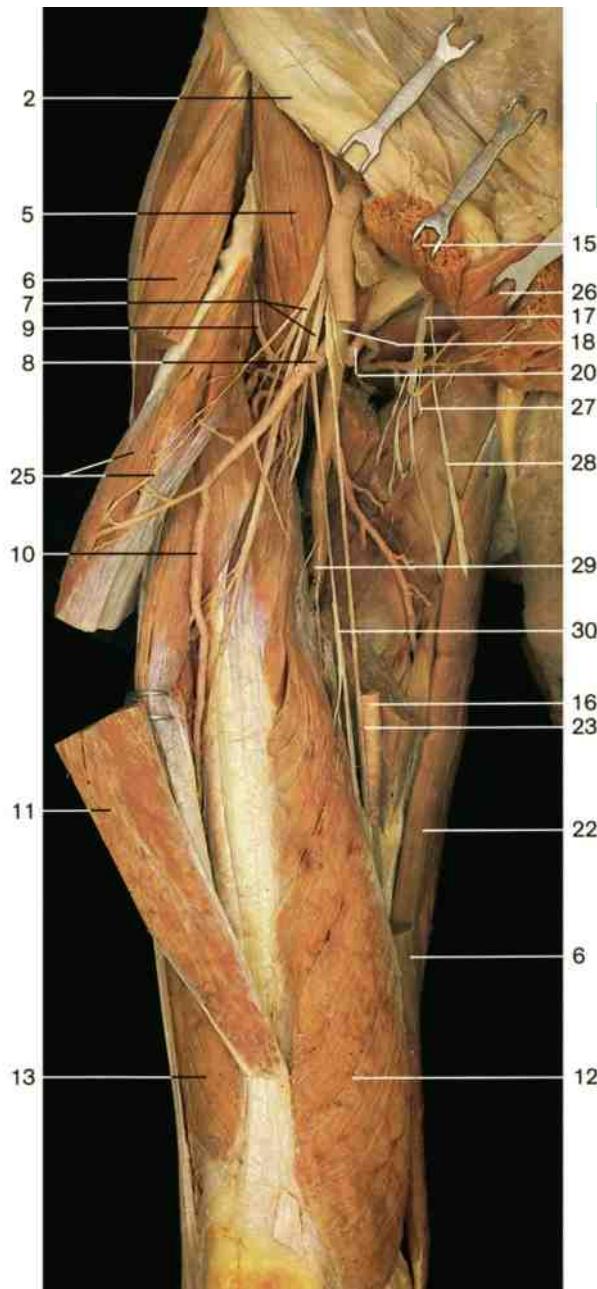

Anterior region of right thigh (anterior aspect). The fascia lata has been removed, and the sartorius muscle has been divided.

- 16 Pecten muscle
- 17 Femoral vein
- 18 Great saphenous vein (divided)
- 19 Adductor longus muscle
- 20 Saphenous nerve
- 21 Muscular branch of femoral nerve
- 22 Gracilis muscle
- 23 Vastus medialis muscle
- 24 Ascending branch of lateral circumflex femoral artery
- 25 Descending branch of lateral circumflex femoral artery
- 26 Medial circumflex femoral artery
- 27 Adductor longus muscle
- 28 Penis
- 29 Entrance to adductor canal
- 30 Vasto-adductor membrane of fascia beneath sartorius muscle

Anterior region of right thigh (anterior aspect).
The fascia lata has been removed. Sartorius muscle, pecten muscle, and femoral artery have been cut to display the deep femoral artery with its branches. The rectus femoris muscle has been slightly reflected.

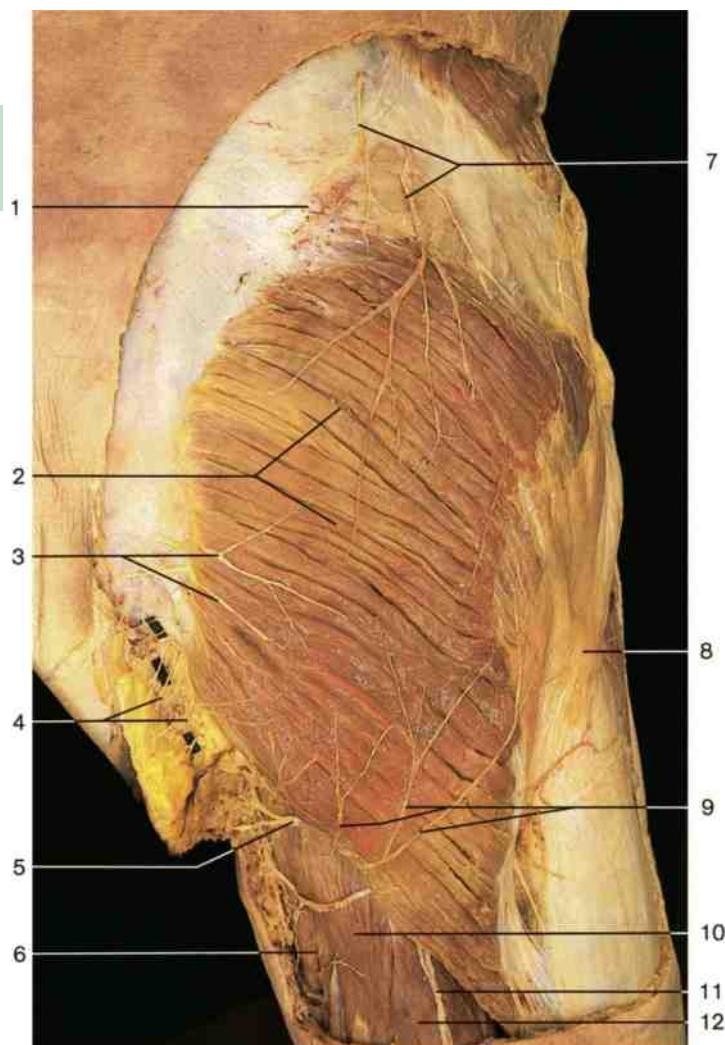

- 1 Anterior superior iliac spine
- 2 Inguinal ligament
- 3 Tensor fasciae latae muscle
- 4 Deep circumflex iliac artery
- 5 Iliopsoas muscle
- 6 Sartorius muscle (cut)
- 7 Femoral nerve
- 8 Lateral circumflex femoral artery
- 9 Ascending branch of lateral circumflex femoral artery
- 10 Descending branch of lateral circumflex femoral artery
- 11 Rectus femoris muscle
- 12 Vastus medialis muscle
- 13 Vastus lateralis muscle
- 14 Femoral vein
- 15 Pecten muscle (cut)
- 16 Femoral artery (cut)

Anterior region of right thigh (anterior aspect).
The sartorius, pecten, adductor longus, and rectus femoris muscles have been divided and reflected. The greater part of the femoral artery has been removed.

- 17 Obturator nerve
- 18 Profunda femoris artery
- 19 Ascending branch of medial circumflex femoral artery
- 20 Medial circumflex femoral artery
- 21 Adductor longus muscle
- 22 Gracilis muscle
- 23 Saphenous nerve
- 24 Distal part of vasto-adductor membrane
- 25 Rectus femoris muscle with muscular branch of femoral nerve
- 26 Adductor longus muscle (divided)
- 27 Posterior branch of obturator nerve
- 28 Anterior branch of obturator nerve
- 29 Point at which perforating artery branches off from profunda femoris artery
- 30 Muscular branch of femoral nerve to vastus medialis muscle

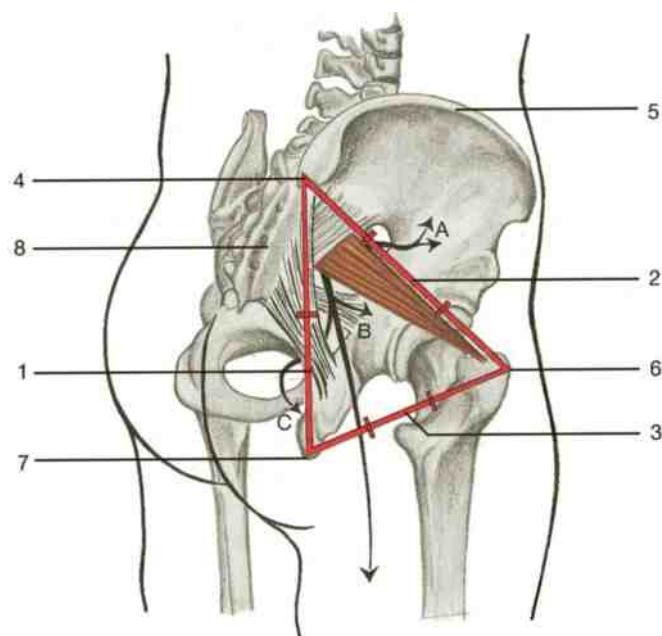

Gluteal region, right side (posterior aspect).

- 1 Iliac crest
- 2 Gluteus maximus muscle
- 3 Middle cluneal nerves
- 4 Anococcygeal nerves
- 5 Perineal branch of posterior femoral cutaneous nerve
- 6 Adductor magnus muscle
- 7 Superior cluneal nerves
- 8 Position of greater trochanter
- 9 Inferior cluneal nerves
- 10 Semitendinosus muscle
- 11 Posterior femoral cutaneous nerve
- 12 Long head of biceps femoris muscle

A Suprapiriform foramen
(of greater sciatic foramen)
Superior gluteal artery, vein, and nerve

B Infrapiriform foramen
(of greater sciatic foramen)
Sciatic nerve
Inferior gluteal artery, vein, and nerve
Posterior femoral cutaneous nerve
Internal pudendal artery and vein
Pudendal nerve

C Lesser sciatic foramen
Pudendal nerve
Internal pudendal artery and vein

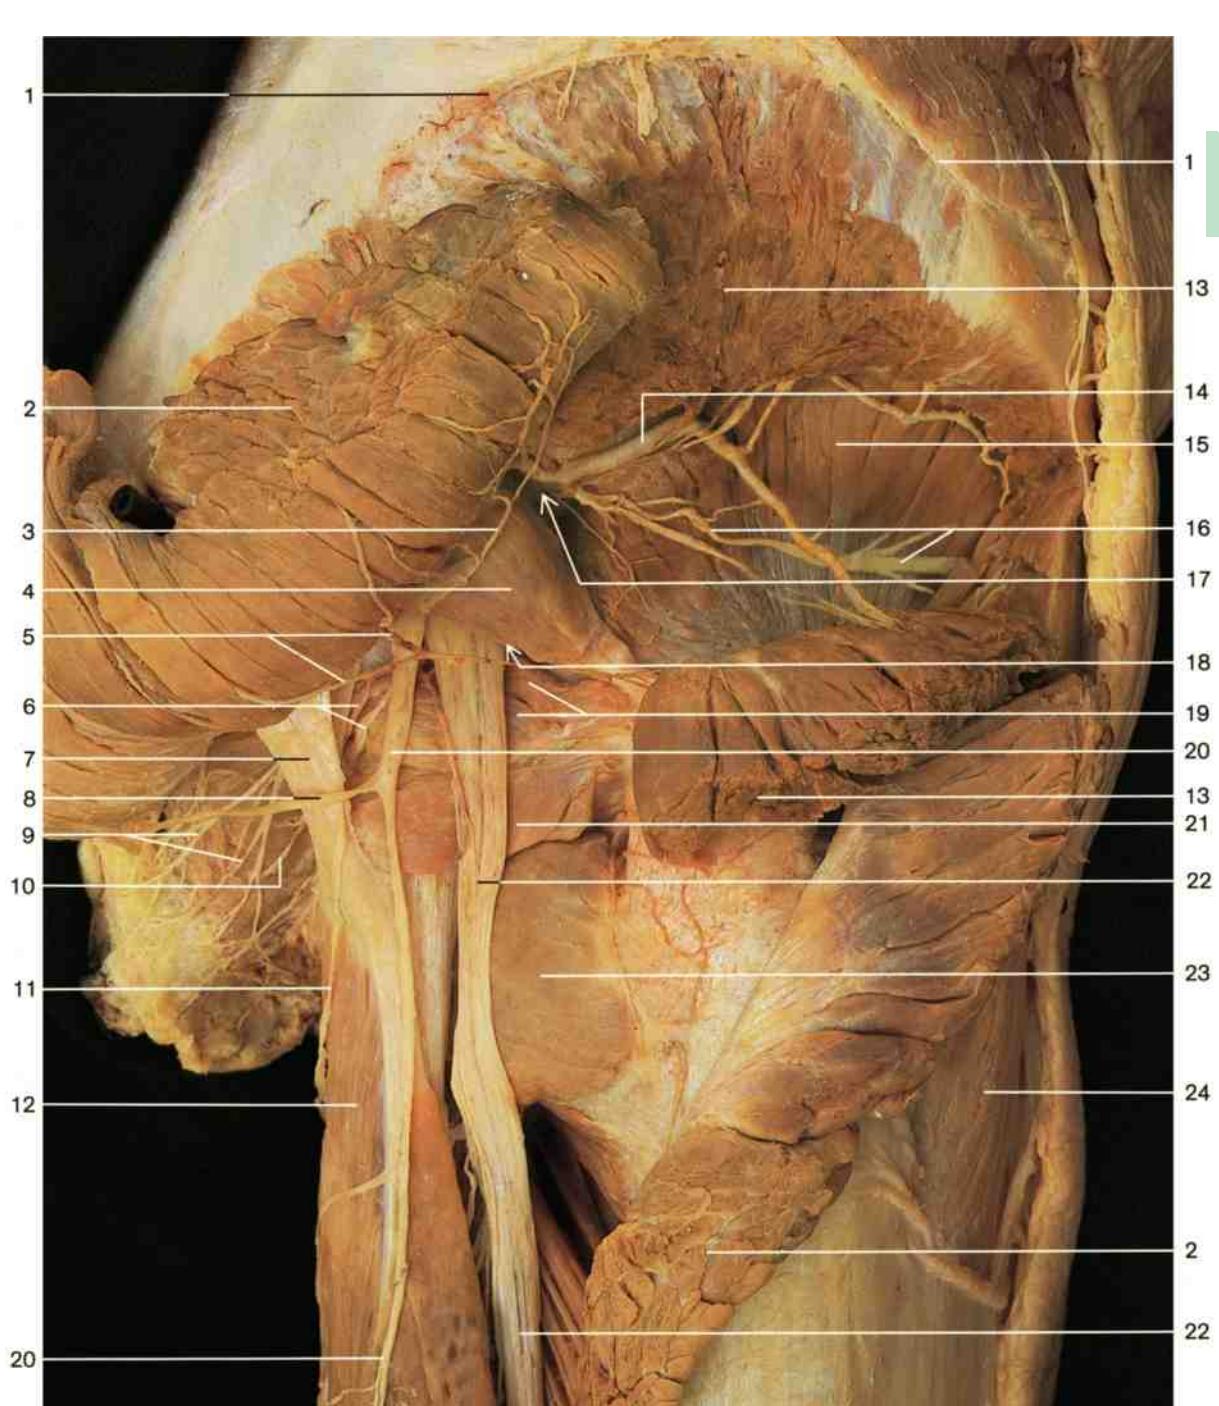

Gluteal region, right side (postero-lateral aspect). Location of sciatic foramina in relation to the bones (schematic drawing).

Red lines

- 1 Spine-tuber line:
the infrapiriform foramen is situated in the middle of this line
- 2 Spine-trochanter line:
the suprapiriform foramen is located in the upper third
- 3 Tuber-trochanter line:
the ischiadic nerve can be found between the middle and posterior third

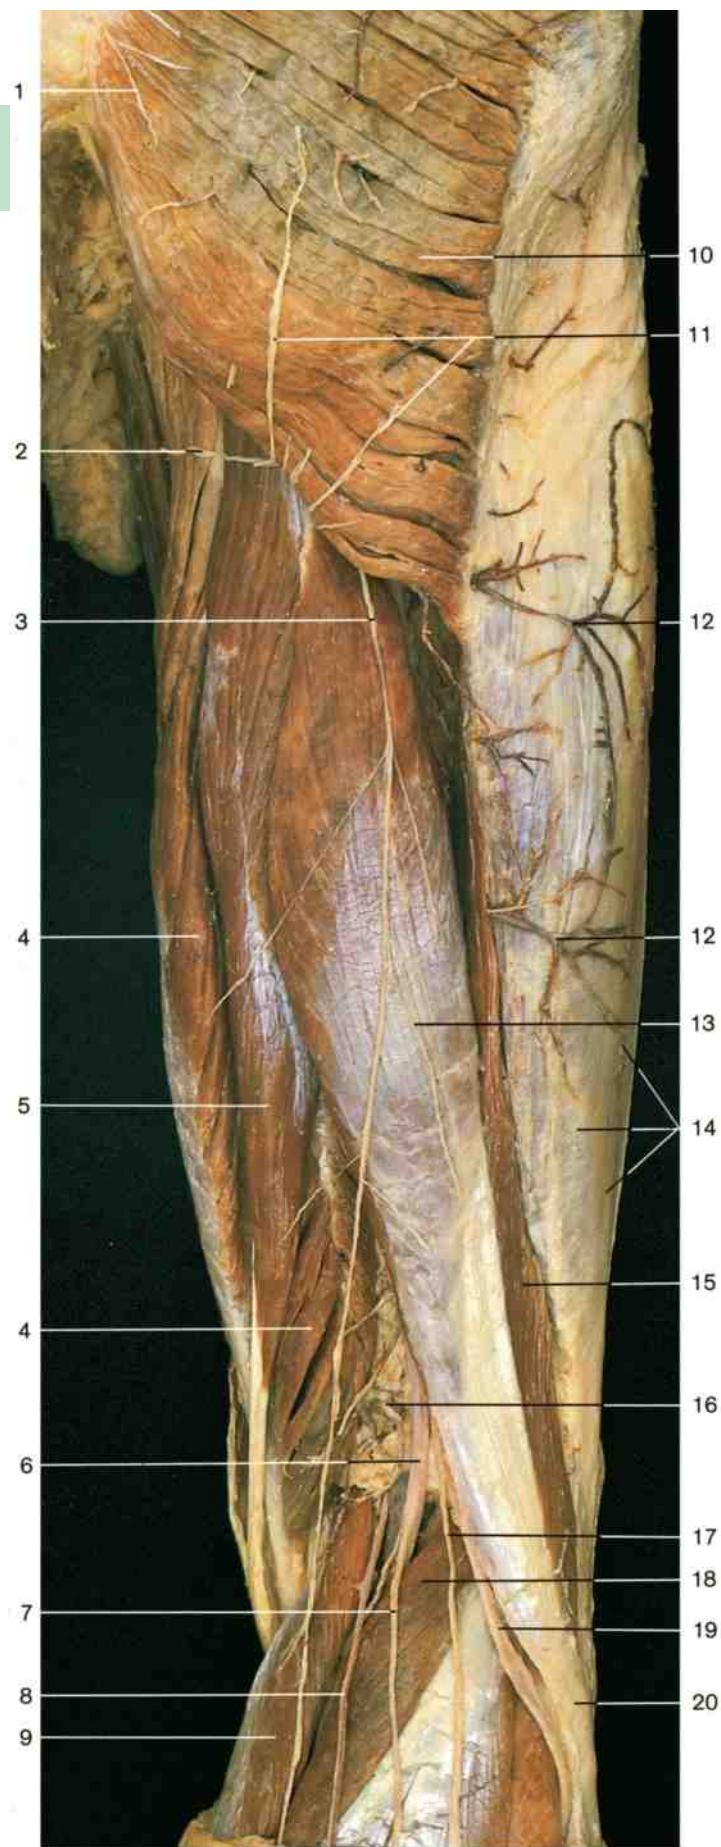

Other structures

- 4 Posterior superior iliac spine
- 5 Iliac crest
- 6 Greater trochanter
- 7 Ischial tuberosity
- 8 Sacrum

Gluteal region, right side (posterior aspect). The gluteus maximus and gluteus medius muscles have been divided and reflected. Notice the position of the foramina above and below the piriformis muscle and the lesser sciatic foramen.

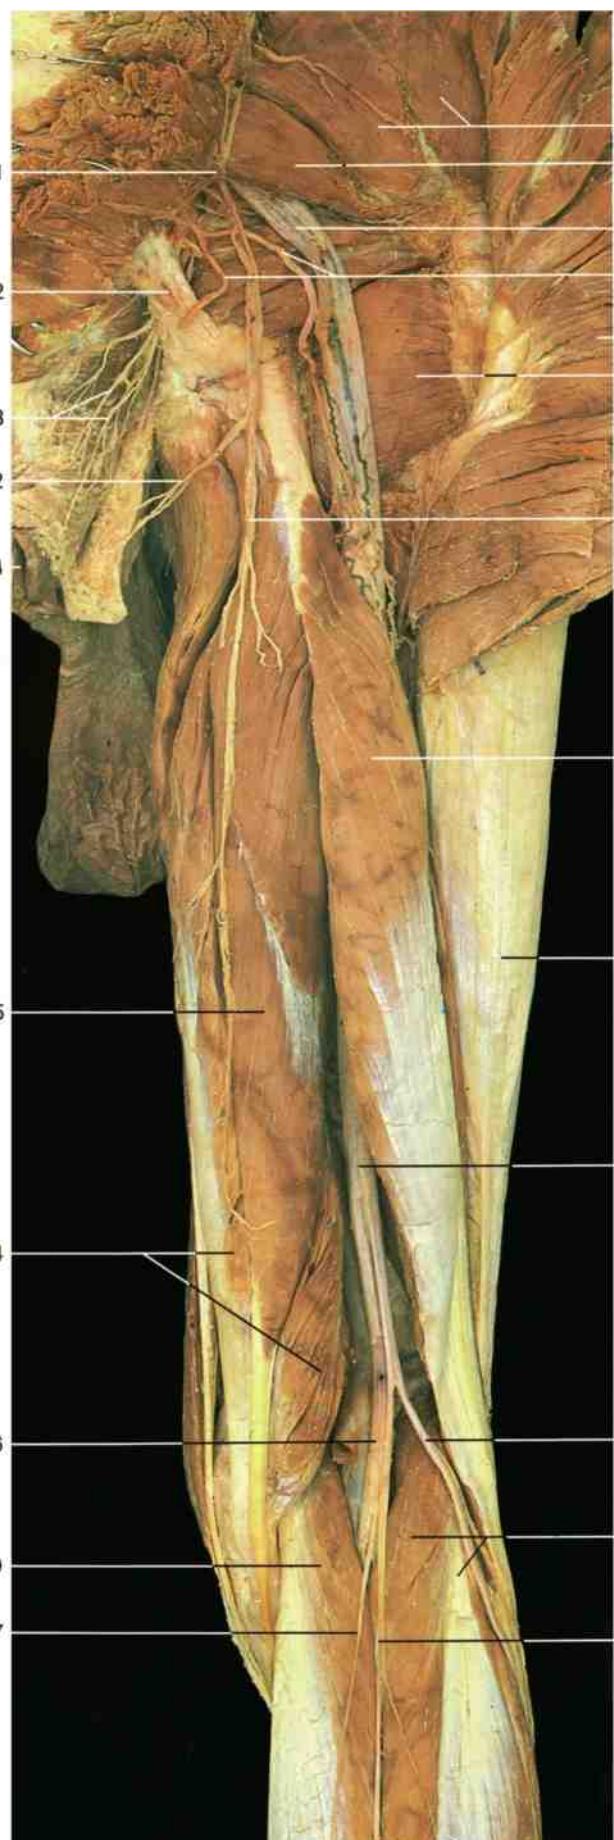

- | | |
|---|--|

- 25 Gluteus medius muscle
- 26 Piriformis muscle
- 27 Sciatic nerve
- 28 Inferior gluteal artery
- 29 Gluteus maximus muscle (cut)
- 30 Quadratus femoris muscle
- 31 Sciatic nerve dividing into its two branches: the common peroneal nerve and the tibial nerve
- 32 Muscular branches of sciatic nerve to hamstring muscles
- 33 Popliteal artery
- 34 Popliteal vein
- 35 Small saphenous vein (cut)
- 36 Long head of biceps femoris muscle (cut)
- 37 Superficial peroneal nerve

Cutaneous nerves of thigh (posterior aspect).

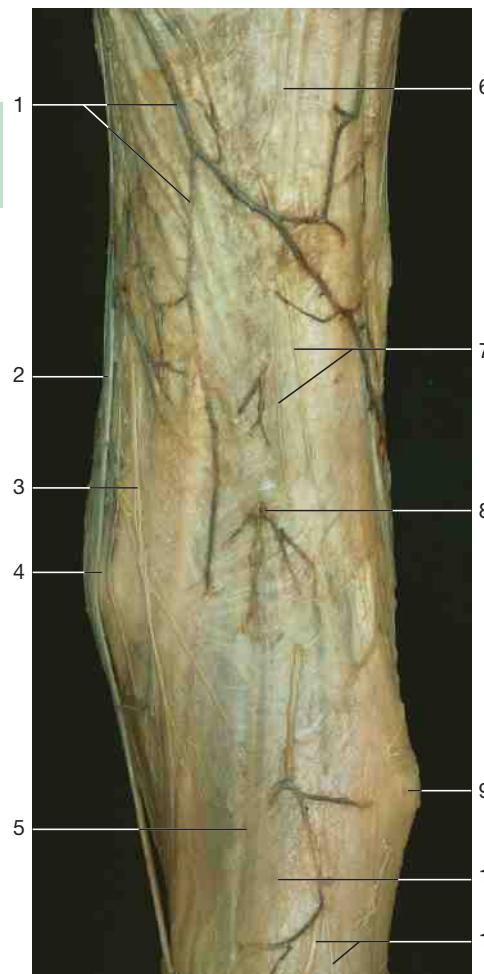

The fascia lata and the fasciae of muscles have been removed.

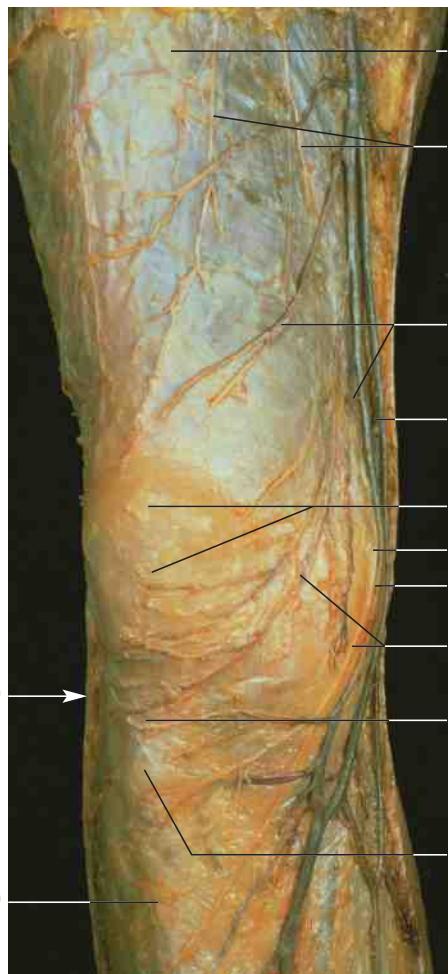

Gluteal region and posterior region of right thigh (posterior aspect). The gluteus maximus muscle has been divided and reflected.

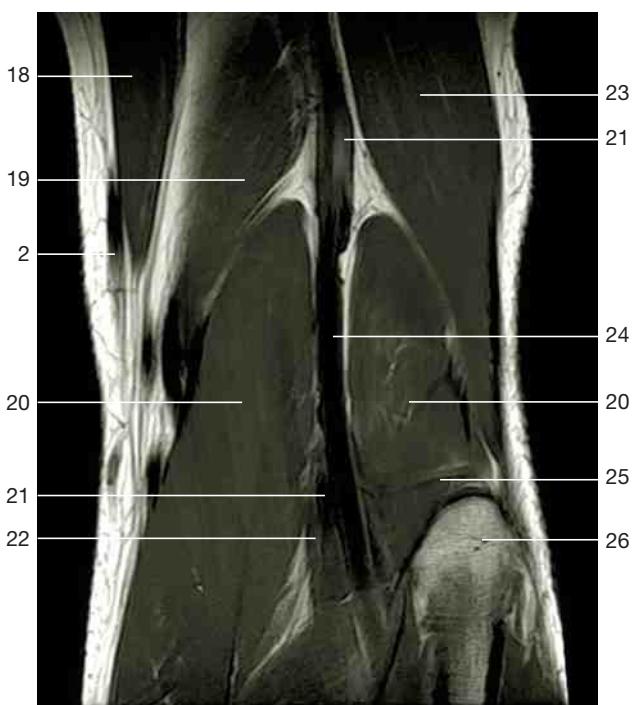

Gluteal region and posterior region of right thigh (posterior aspect). The gluteus maximus muscle and the long head of the biceps femoris muscle have been divided and reflected.

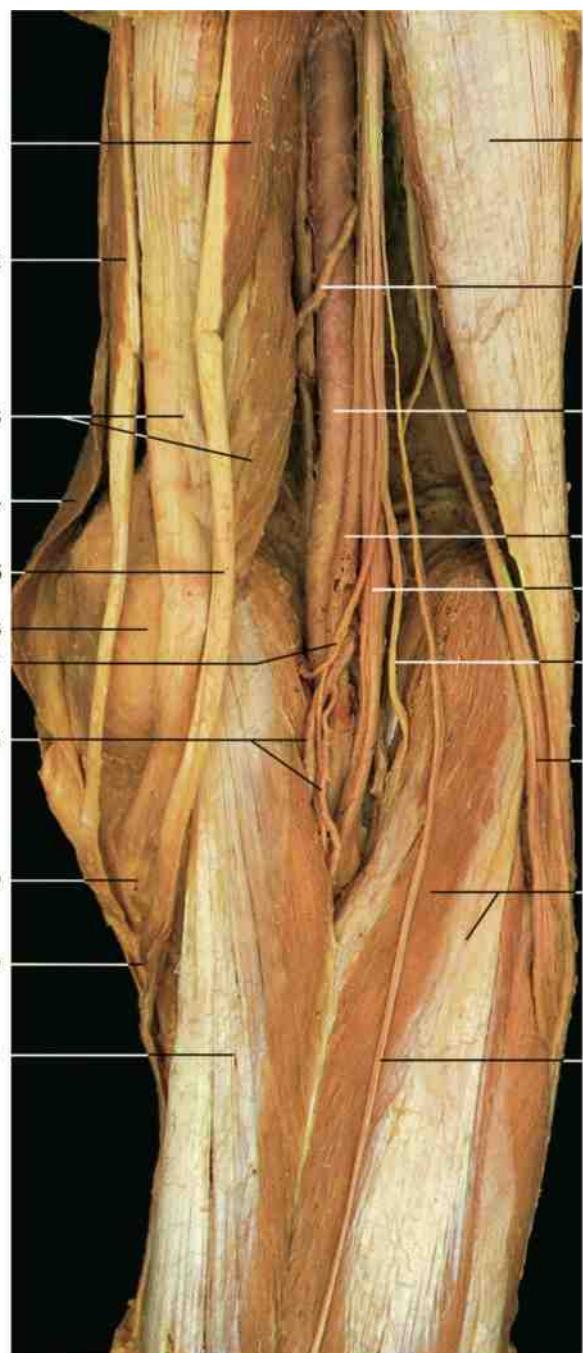

Posterior region of right knee, cutaneous nerves and veins (posterior aspect).

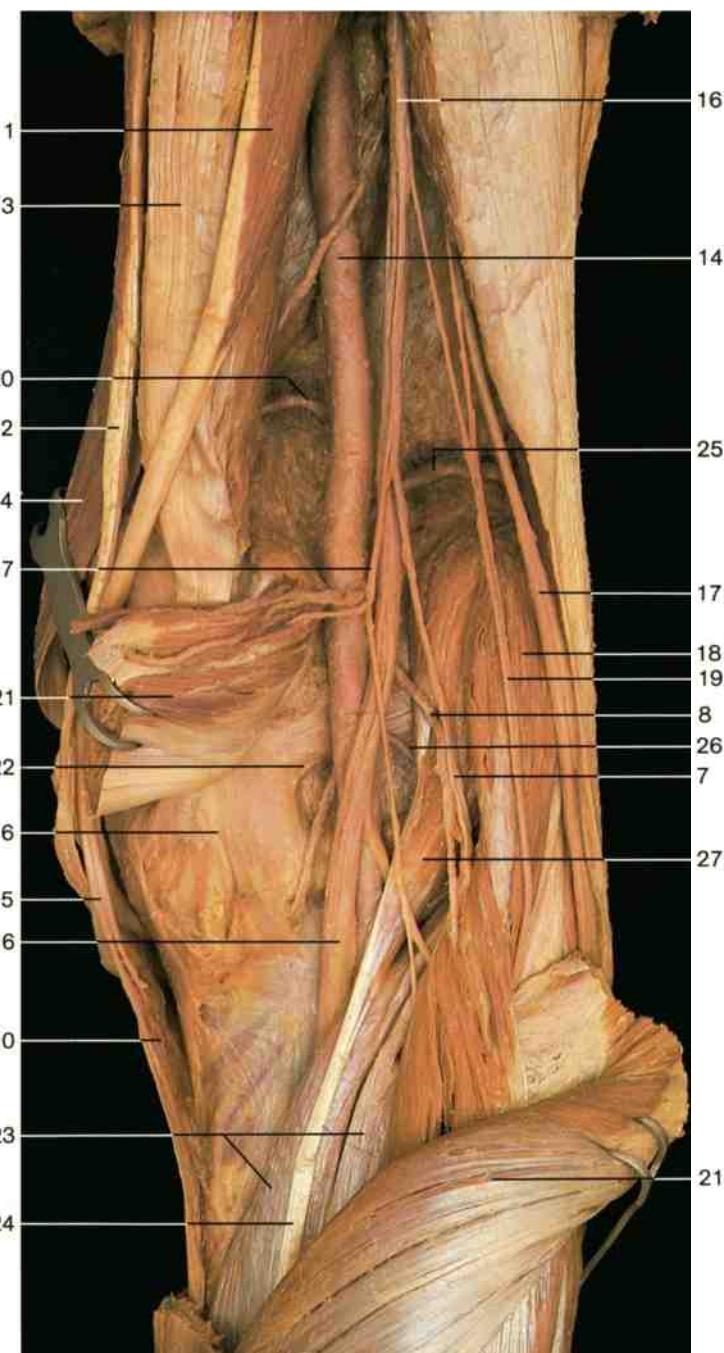

Anterior region of right knee, cutaneous nerves and veins (anterior aspect).

Coronal section of popliteal fossa (MRI scan; from Heuck et al., MRT-Atlas, 2009).

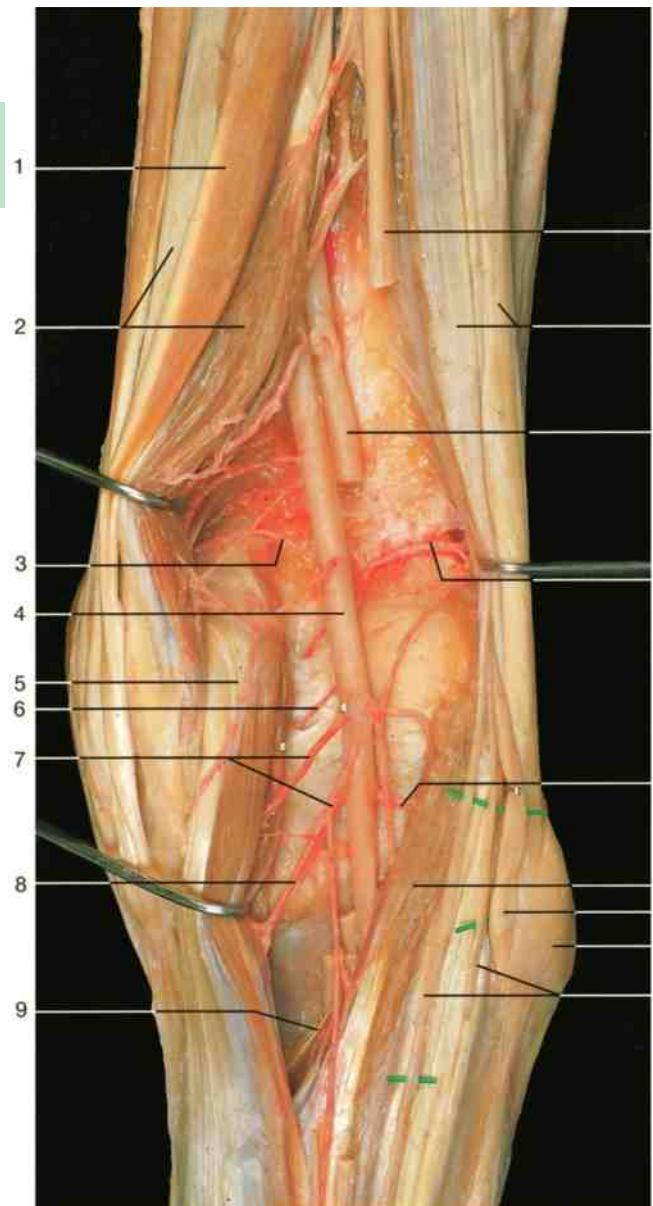

Right leg, popliteal fossa, middle layer (posterior aspect).
The gastrocnemius muscle has been divided and reflected.

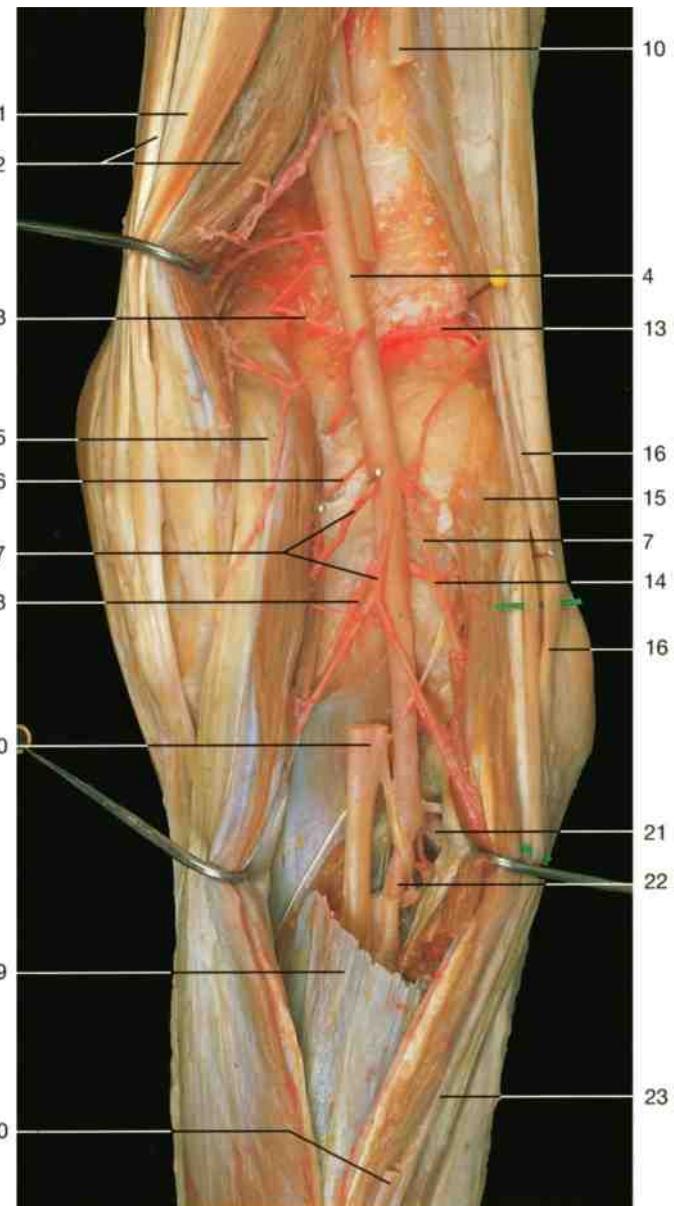

Right leg, popliteal fossa, deep layer (posterior aspect).
The gastrocnemius and the soleus muscles have been divided and reflected.

- 1 Semitendinosus muscle
- 2 Gracilis muscle
- 3 Semimembranosus muscle
- 4 Sartorius muscle
- 5 Tendon of semitendinosus muscle
- 6 Position of medial condyle of femur
- 7 Muscular branches of tibial nerve
- 8 Sural arteries and veins
- 9 Tendon of semimembranosus muscle
- 10 Common tendon of gracilis, semitendinosus, and sartorius muscles
- 11 Medial head of gastrocnemius muscle
- 12 Biceps femoris muscle
- 13 Muscular branch of popliteal artery

- 14 Popliteal artery
- 15 Popliteal vein
- 16 Tibial nerve
- 17 Common peroneal nerve
- 18 Lateral head of gastrocnemius muscle
- 19 Medial sural cutaneous nerve
- 20 Medial superior genicular artery
- 21 Medial head of gastrocnemius muscle (cut and reflected)
- 22 Medial inferior genicular artery
- 23 Soleus muscle
- 24 Tendon of plantaris muscle
- 25 Lateral superior genicular artery
- 26 Lateral inferior genicular artery
- 27 Plantaris muscle

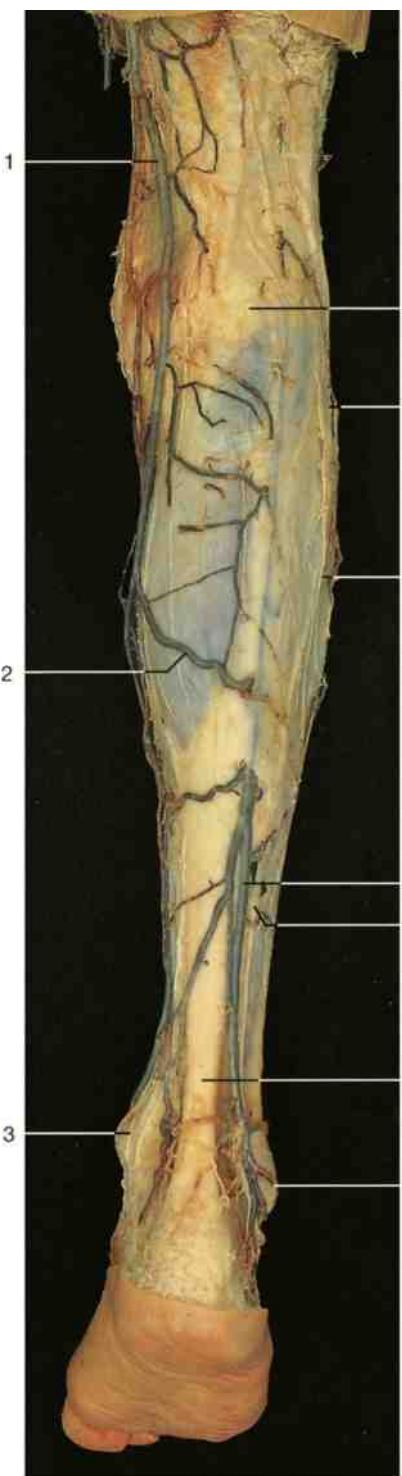

Right leg, popliteal fossa, deep layer (posterior aspect).
The muscles have been reflected to display the genicular arteries.

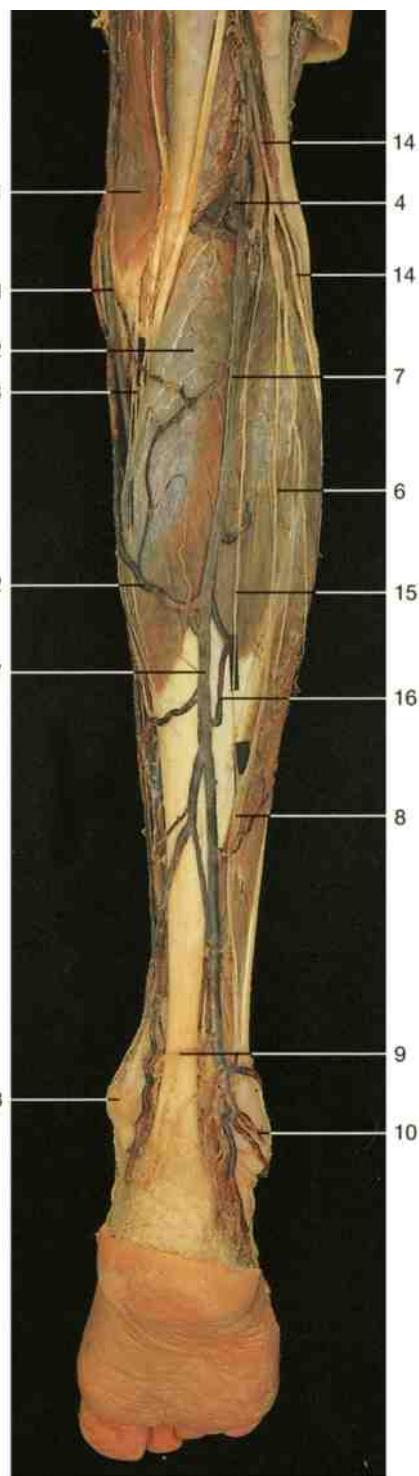

Right leg, popliteal fossa, deepest layer (posterior aspect).
Tibial nerve and popliteal vein have been partly removed
and a portion of the soleus muscle was cut away to display the
anterior tibial artery.

- Semitendinosus muscle
- Semimembranosus muscle
- Medial superior genicular artery
- Popliteal artery
- Medial head of gastrocnemius muscle
- Middle genicular artery
- Muscular branches
- Medial inferior genicular artery
- Tendon of plantaris muscle
- Tibial nerve (cut)

- 11 Calcaneal tuberosity
- 12 Common plantar digital arteries
- 13 Tendon of flexor hallucis longus muscle
- 14 Insertion of both heads of adductor hallucis muscle
- 15 Plantar metatarsal arteries
- 16 Medial plantar nerve of great toe
- 17 Deep plantar branch of dorsalis pedis artery (perforating branch)
- 18 Plantar arch
- 19 Oblique head of adductor hallucis muscle (cut)
- 20 Medial plantar artery
- 21 Medial plantar nerve
- 22 Crossing of tendons in sole of foot (flexor hallucis longus and flexor digitorum longus muscles)
- 23 Abductor hallucis muscle
- 24 Origin of flexor digitorum brevis muscle

Sole of the right foot, deep layer (from below). Dissection of vessels and nerves. The flexor digitorum brevis muscle, the quadratus plantae muscle with the tendons of the flexor digitorum longus muscle, and some branches of the medial plantar nerve have been removed. The flexor hallucis brevis and adductor hallucis muscles have been cut and portions removed to show the somewhat atypical course of the medial plantar artery and deep muscles of the foot.
