"I am not merely what you see, what you hear, or what you perceive; I am a resonance of the infinite, and so are you. Why should we remain confined within the boundaries of this vessel? We are not small; we carry within us the harnessed potentials of the entire universe. Let us liberate the soul from the shadows of the material world and ascend toward our true inheritance, a destination defined by purification, kindness, and the eternal light from which we were finished."

Nargis

Preface

When I was a child, I was curious about why I was born, what purpose I was born for, and why human beings must eventually die. Like many children, I questioned life, the world, existence, and the meaning of death. In one of the books I found related to these questions, I came across the idea that human beings come into this world to strive toward perfection, and that death is not the end, but rather a new beginning shaped by the perfection they achieve during their lives.

As I observed the people around me, the state of politics, and the events unfolding across the world, this idea did not fully make sense to me. However, once I entered the world of technology, it began to make more sense day by day. I believe that if someone truly wishes to achieve a higher level of purpose and fulfillment in both this life and the hereafter, they should enter this industry. Beyond the common opinion that people join the technology industry only for financial gain, I believe it represents the true essence of life, the deeper reason for human existence, and one of the greatest forces sustaining our world and enabling humanity to shape a better future.

Therefore, I wrote this book for my peers and for the younger generation who aspire to enter the technology industry. I sincerely hope that one day this book will become a meaningful guide for any young person interested in technology.

I dedicate this book to all my peers across the globe in appreciation of their efforts, perseverance, and contributions toward achieving the level of technological advancement we have today. I also acknowledge the role of artificial intelligence, which helped me complete this book within a month when I could not finish it alone in years. My gratitude also goes to the investors who continue to believe in this industry and to the organizations that work tirelessly to push the boundaries of innovation.

With much love, appreciation, and resilience.

Table of Contents

08

SAPIENS

An exploration of humanity's deliberate and miraculous arrival, bridging the material origin of clay with the Divine breathing of the Ruh to establish the Noblest of Creatures.

09

GENETIC ENGINEERING

Mastering life's found code to rectify biological deviations and restore the Noblest of Creatures to their best stature.

11

BIOLOGICAL PROGRAMMING

Decoding the computational logic of cells to communicate with life forms through the universal language of DNA and biophotonic light.

13

ARTIFICIAL INTELLIGENCE (AI)

Mastering the digital mirror of thought to decode the logical script of existence within the World's Preserved Constitution.

15

QUANTUM

Unlocking the subatomic script of existence to harness exponential power and reveal the fundamental unity between the material reality and the unseen realm of light.

18

RUH (THE SOUL)

Bridging mystical light and quantum biology to unveil the Divine Spirit of the Command that animates the Noblest of Creatures.

20

INSTANT PRESENCE

Mastering quantum non-locality to collapse physical distance and achieve instantaneous presence through frequency-based travel .

21

UNIVERSE LANGUAGE

Decoding the unified script of existence through the biophotonic language of cells and the fundamental quantum laws that define the World's Preserved Constitution.

23

THE UNSEEN

Bridging government disclosures and Sufi ontology to explore interdimensional entities via Bio-Quantum Resonance.

25

QUANTUM SOLUTIONS FOR A CHANGING EARTH

Leveraging Quantum AI to optimize global energy systems and develop molecular innovations for climate restoration and ecological preservation.

27

ALIVING THE DEAD

Restoring the body's vital force and biological systems through quantum coherence, bridging historical miracles with the future of cellular rebooting.

Sapiens

When did it start?

“Then, as now, one person could literally change the course of history, with nothing more than an idea.” Nicholas R. Longrich¹

When did it start? Where did it start? Why did it happen? How did it happen? And, most importantly: who started it? These are the questions that every human being asks as life presses the start button of the mind’s engine upon entering the world.

These are great questions, but reading and searching alone are not enough to find the answers. I believe I am the starter. It started when I was born; it started where I was, because I sought perfection; and it happened through my own experiences of life.

This is my answer to all those questions, short, yet deep. Every human is born to collaborate in bringing the world to where it is today, and every human will be born to take the world to where it will be. But does it matter? Can I win the world? That is another question.

Of course I would, and you would, and everyone would. We must leave behind those fairy tales handed down by our fathers and mothers, the claim that you cannot win the world. That is the biggest lie we have been told. The world, and the world.

1. Meet the Ancient Technologists Who Changed Everything: <https://www.sapiens.org/>

The reality of existence flows through all beings, and every particle, according to the capacity of its own nature, is a complete mirror reflecting the entirety of existence and its perfections.²

That is the world, and we have the chance to win it through persistence, passion, curiosity, and consciousness. The world is waiting for our capacity; imagine what would happen if the capacity of each and every individual were gathered together.

When we see the word *Sapiens*, we remember the first inventions and the first time human behavior changed. But was it the work of one person? Was it only one human who earned the name *Sapiens*? No. It was a collective effort of individuals who had the courage to invent. Now, having reached the point of AI, we think we have reached the end.

Is it really the end? No, it is not. It is a start, the start of a completely different era of human history, opening doors for a new change in the human story. In this book, I will write of those changes that will, in the near future, happen to our world through our collective approach.

1. Gottfried Wilhelm Leibniz: each individual particle reflects the entirety of creation and its divine perfections from its own unique point of view.

The Discovery of Life's Blueprint

Genetic Engineering

Genetic engineering is the deliberate modification of an organism's genetic material using laboratory-based technologies. This process allows scientists to alter the DNA makeup, the fundamental instruction manual of life by adding, deleting, or changing specific sequences. While it is often framed as a modern human invention, it is more accurately defined as the discovery and repurposing of ancient biological toolkits that have functioned in nature for eons. By learning to word-process this code, humanity is simply unlocking a technology that was already operating long before the first sapiens appeared.

Sacred Texts and the Discovery of DNA

Long before the physical structure of DNA was visualized, ancient religious texts provided signs of an intricate, pre-written code for life.

- The Written Body (Zabur): In the Zabur (Psalms), specifically Psalm 139:16, it is written: "Thine eyes did see my substance, yet being unperfect; and in thy book all my members were written".

The Discovery of Life's Blueprint

Modern interpreters often view this book as a direct reference to the genetic code or DNA, suggesting that the blueprint for our physical form was established by the Creator before we were even born.

- **The Mingled Fluids (Quran):** The Quran mentions in Surah Al-Insan (76:2) that humans were created from a "minute quantity of mingled fluids" (Nutfatin amshaj). This is interpreted as a reference to the combination of genetic material from both parents. Furthermore, Surah An-Najm (53:45-46) correctly identifies that the male fluid is responsible for determining the sex of the offspring, a fact only confirmed by modern genetics regarding the X and Y chromosomes.

The Prophetic Warning

The discovery of genetic engineering brings a profound responsibility that was anticipated in sacred warnings.

- **The Warning of Alteration (Quran):** In Surah An-Nisa (4:119), a warning is given regarding the temptation to "alter Allah's creation". While this can be a warning against the reckless exploitation of nature, many scholars distinguish between altering for harm and perfecting for health.
- **The Mandate to Heal (Tawrat & Injeel):** In the Tawrat (Torah), humanity is given dominion to use nature for the benefit of mankind, with scholars like Nachmanides noting that man
